Styling module

Content updated: 05/19/2020

This article is designated for administrators.

About

The **Styling module** lets you create new styles based on common use cases. With this module, admins can preview the generated style, share it with other admins for review, and then apply it in production.

This guide covers the non-Theming styling options. For information about Kaltura's Theming feature set, see legacy Video Portal Theming tour.

For advanced theme creation, for which a deep CSS understanding is required, please use Kaltura's Cssupload module.

Custom CSS fonts

Enable - Select Yes to enable the Styling module

Fonts - Select **+Add "fonts"** These fonts will be available in custom CSS and in the Font selectbox on the styling page

- **familyName -** Font family name that will be used in CSS and will be appended to the Font select box on the styling page.
- **fallbackFonts -** Font families and font types which should be used as a fallback when the desired font family is not ready or doesn't exist (comma-separated list, like in CSS specifications).

  Specifying generic font type (like `serif` or `monospace`) is mandatory.

  Example: `'Helvetica Neue',Arial,sans-serif`

  type - Font assets source type:

  - **System font** - use worldwide supported font by name
  - **Import from URL** - use an external font service (like Google Fonts)

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

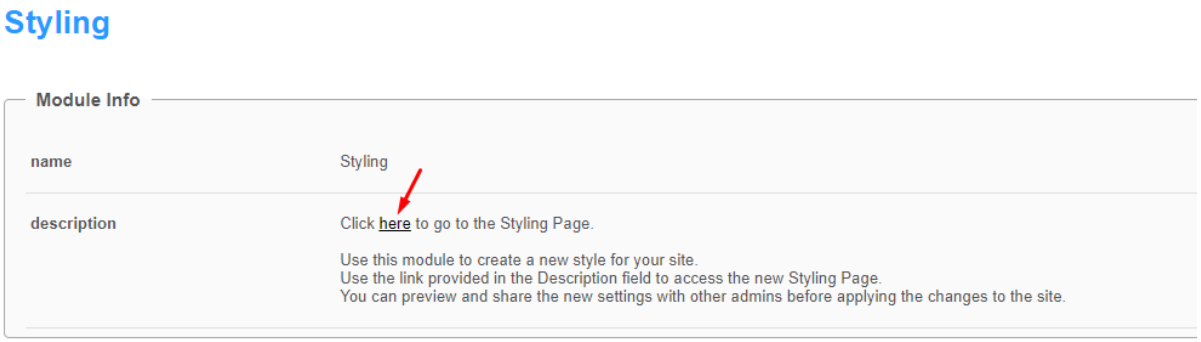

- **Upload files** - upload your own font asset files

isCssApplied - This field indicates whether the style created in the Styling Module is applied on the site or not. Click Reset to clear all previously set styles.

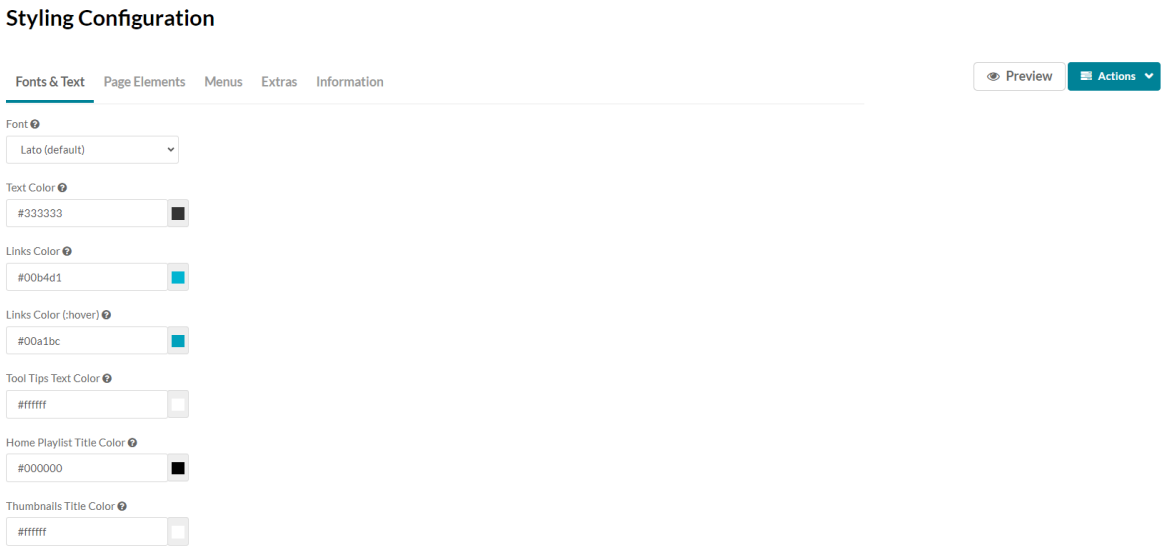

Configuration

The **Styling** configuration page provides administrators with an interface where they can modify look and feel attributes like text color, background color, and fonts.

Use the link provided in the description to access the new Styling page.

The **Styling Configuration** page displays.

Here is a list of the items that can be modified in the Styling module:

Tab Location	Attribute	Description	Visual

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.
