

Styling

Last Modified on 02/09/2021 12:00 am IST

The Styling Module for MediaSpace and KAF administrators, provides the ability to create a new style based on most common use cases. The tools also allow the admins to view the newly generated KMS/KAF theme prior to setting it up on production and share it with other admins.

For advance theme creation, for which a deep CSS understanding is required, please use Kaltura's [Cssupload](https://debdev.qakmstest.dev.kaltura.com/admin/config/tab/cssupload) (<https://debdev.qakmstest.dev.kaltura.com/admin/config/tab/cssupload>) Module

Use the link provided in the Description field to access the new Styling Page.

You can preview and share the new settings with other admins before applying the changes to the site.

Field	Description
enabled	Enable the Styling Module.
fonts	Select +Add"fonts" These fonts will be available in custom CSS and in the Font selectbox on the styling page
familyName	Font family name that will be used in CSS and will be appended to the Font select box on the styling page.
fallbackFonts	Font families and font types which should be used as a fallback when desired font family is not ready or doesn't exist (comma-separated list, like in CSS specifications). Specifying generic font type (like <code>serif</code> or <code>monospace</code>) is mandatory. Example: <code>'Helvetica Neue',Arial,sans-serif</code>
type	Font assets source type: <ul style="list-style-type: none"> • System font - use world-wide supported font by name • Import from URL - use external font service (like Google Fonts) • Upload files - upload your own font asset files
isCssApplied	This field indicates whether the style created in the Styling Module is applied on

	the site or not. Click Reset to clear all previously set styles.
