

Configuring Header Authentication Through the MediaSpace SSO gateway

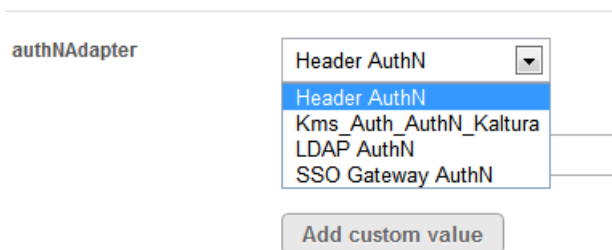

Last Modified on 08/05/2020 11:45 am IDT

To configure header authentication through the MediaSpace SSO gateway

1. On the Configuration Management panel of the Kaltura MediaSpace Administration Area, open the [Auth](#) tab.

After you complete and verify the following steps, click **Save**.

2. Under [authNAdapter](#), select **Header AuthN**.

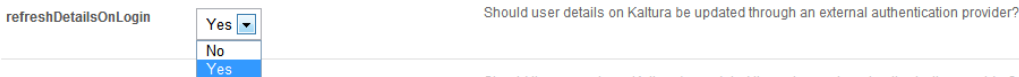

The screenshot shows a configuration panel for 'authNAdapter'. A dropdown menu is open, displaying the following options: 'Header AuthN' (which is highlighted in blue), 'Kms_Auth_AuthN_Kaltura', 'LDAP AuthN', and 'SSO Gateway AuthN'. Below the dropdown is a button labeled 'Add custom value'.

3. Select your preferences for the [common login options](#).

4. Under [refreshDetailsOnLogin](#), select your preference.

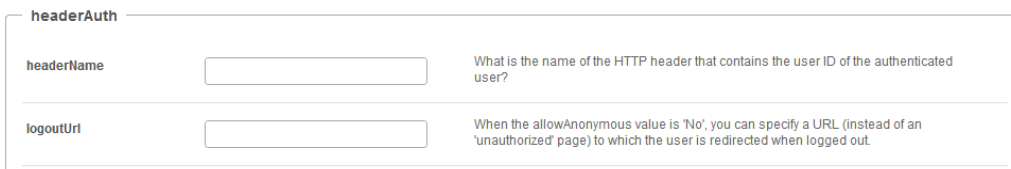

This option affects the updating of the user's first name, last name, and email address (when provided) from your authentication system upon every login.

The screenshot shows a configuration panel for 'refreshDetailsOnLogin'. A dropdown menu is open, displaying the following options: 'Yes' (which is highlighted in blue), 'No', and 'Yes'. To the right of the dropdown is a text label: 'Should user details on Kaltura be updated through an external authentication provider?'.

5. Under [headerAuth](#), enter values for:

- **headerName** – the name of the request header that contains the user ID (the value of the request header would be the user ID).
- **logoutUrl** – where to send the user after logout.

The screenshot shows a configuration panel for 'headerAuth'. It contains two input fields with labels and descriptions:

- headerName**: What is the name of the HTTP header that contains the user ID of the authenticated user?
- logoutUrl**: When the allowAnonymous value is 'No', you can specify a URL (instead of an 'unauthorized' page) to which the user is redirected when logged out.
