

# Wonda Labs - Set up the Connection with Kaltura

Last Modified on 04/16/2026 8:50 pm IDT

This article describes the steps to set up the connection with Kaltura.

In order to complete the steps in this article, you must have the following roles:

- Hub Admin in Wonda Labs
- Kaltura Account Administrator

## 1. Generate an App Token for your Kaltura account.

Depending on your needs, you can set up this app so it can either:

- Allow **every participant of the Hub in Wonda Labs to see all content** from the Kaltura account (no matter if it is the participant or someone else who has uploaded the content to Kaltura).
- Allow **each participant to see only their own content** in Kaltura.

## 2. Once the App Token has been generated by Kaltura, go to General Settings in Wonda Labs. Click on the Integrations tab, then choose Kaltura.

## 3. Type the App Token required information, then click **Confirm**.

Note - You will need to generate two App Tokens - one for **editing** and one for **playback**.

For detailed token configuration, see [Wonda's Kaltura Integration Guide](#).
