About

Navigating the extensive content within your video portal can be challenging, but Kaltura's search system is here to lend a hand. It swiftly searches through all the entries, pinpointing the most pertinent and valuable results aligned with your search query. This intuitive presentation ensures that you quickly locate what you're looking for.

For Administrative information on the search in KMS applications see the [Kaltura Search Module - Administrator's Guide](#) article.

 For the Theming-based search page, please see our articles [Global Search](#) and [Search module](#).

Types of search pages

You can use the Kaltura's search function in many of the video portal pages. There are four types of search pages available:

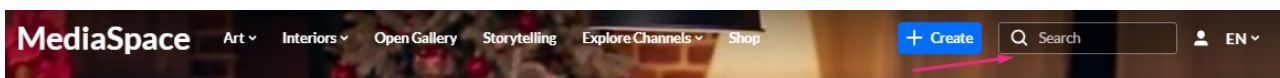

- [Global Search](#)
- [Media Search](#)
- [Channels Search](#)
- [Galleries Search](#)

Global search

The Global Search page can be reached from the top right header. This unified search page contains not only media results, but also results for galleries and channels.

 The Global Search display page is configured by your system administrator.
