

Enable the Browseandembed Module in KAF

Last Modified on 06/25/2020 6:47 pm IDT

1. Login to your KAF application and go to the Kaltura Configuration Management window.
2. Scroll down and select the **Browseandembed** module in the ModulesCustom/core/kaf section.

The Browseandembed Administration page is displayed.

The screenshot shows the 'Configuration Management' page for the 'Browseandembed' module. The interface includes a navigation sidebar on the left with categories like 'Server Tools', 'Global', 'Application', 'Admin', 'Categories', 'Channels', 'Client', 'Debug', 'Gallery', 'Header', 'Languages', 'Metadata', 'Moderation', 'Navigation', 'Player', 'Security', 'Share/Repost/ones', 'Widgets', 'Search', 'MediaCollaboration', and 'PlaylistPage'. The main content area is titled 'Browseandembed' and contains a 'Module Info' section with a description and a list of configuration parameters. Below this is the 'embedSettings' section, which lists two settings for 'Player for Marketing' and 'Player for Techpubs'. Each setting includes fields for 'playerDisplayName', 'playerId', 'entryType', 'isTypeDefault', 'embedSizes', and 'embedSizeCustom'. The 'embedSizes' field has three checkboxes: '608x402' (checked), '400x295', and '304x231'. The 'embedSizeCustom' field has a text input and a checkbox. There are 'DELETE' buttons for each setting and '+ Add "embedSizeCustom"' and '+ Add "embedSettings"' buttons. A 'Save' button is at the bottom left.

3. In the Enabled field, select Yes to enable the **Browseandembed** module.
For all the Browseandembed module configuration parameters and additional information, see the article [Custom/Core Modules/KAF Browseandembed module](#). This article focus on how to set up the Browse Search and Embed Settings icon.
