

How to target information to an ad server?

Last Modified on 08/26/2020 11:22 pm EDT

While ads targeting is performed within the ad server, Kaltura's VAST advertising module is designed to pass all the relevant targeting information to the ad server. Targeting information can be set in several levels:

- Targeting per player and ad slot – you can add additional key value pairs within the adtag URL.
- The ad server will use these for targeting.
- Targeting per content item - The Kaltura VAST module supports dynamic pulling of metadata from the content item, and passes it to the ad server.

For example for targeting a specific content category. To see the step by step method [click here](#).
