

How to change the player's info screen label?

Last Modified on 07/29/2021 10:35 am IDT

Using the player's Strings plugin, administrators may custom and localize the player's default labels and tooltips. To learn more, please see [Player localized strings override \(http://player.kaltura.com/modules/KalturaSupport/tests/StringsLocale.html\)](http://player.kaltura.com/modules/KalturaSupport/tests/StringsLocale.html). The info screen label is an exception as the tooltip is hard-coded and the title might not change using the key "mwe-embedplayer-info". As a workaround, to override the info tooltip, the following UI Variable needs to be added: "infoScreen.tooltip".

To change the player's info screen label

1. In the KMC, select Studio and then select Universal Studio.
2. Select the player you wish to edit.
3. Select the plugins icon.
4. Check UI variables and add the key "infoScreen.tooltip" with the desired value.
5. Click Save Player Settings.

UI Variables ▼

Allows you to add UI variables to the player configuration.

UI variables ⓘ

Key	Value
<input type="text" value="infoScreen.tooltip"/>	<input type="text" value="New Value"/> [X]
