

Why can't I be heard when a video is being played in the room?

Last Modified on 12/26/2021 10:11 am IST

By default, all microphones are disabled while a video is being played in the room. This is to prevent echoes caused by participants' speakers being streamed back into the room. Microphones are re-enabled automatically when the video is paused or stopped.

The microphone settings may be configured both through the room Settings menu or at the company level by Kaltura's backend.
