

SiteRegistration module

Last Modified on 09/14/2024 3:07 pm IDT

 This article is designated for administrators.

About

The **siteRegistration** module makes it easy to set up registration, customize the registration page, set email templates for post registration and registration confirmation, set calendar invites, manage email domains, and close registration.

 The following accounts have the [Theming module](#) enabled.

Configure

1. Go to your Configuration Management console, and click the **Siteregistration** module. You can also navigate directly using a link:

https://{your_KMS_URL}/admin/config/tab/siteregistration.

Modules /
siteRegistration
Basesiteregistration
Inviteusers
Siteregistration
Webhooksiteregistration

The SiteRegistration page displays.

Siteregistration

Module Info

Description The siteregistration module is used to: choose who must register, control the look and feel of the registration page, setup the email template to use for post registration and registration confirmation, decide on approved/rejected email domains, and close the registration.

Note KMS only Module. Depends on the [Theming module](#)

Embed registration You can embed the registration form in external pages. Click on the link to navigate to the embed settings page.
[Embed registration](#)

enabled	<input type="button" value="Yes"/>	Enable the Siteregistration module.
requireRegistration	<input type="button" value="All"/>	Select which of the registration user types are required to register. Select "SSO Only" to present the registration form to any user after login through SSO authentication to the site. The "{site_URL}/register" URL will not be available for guests. Select "Form Users Only" to present the registration form for guests, using the "{site_URL}/register" URL. SSO users login to the site will not be asked to register.
registrationCompleteTitle	<input type="button" value="Almost done!"/>	Title of the page presented after the registration form is submitted
registrationCompleteText	Text for the page presented after the registration form is submitted	

Please check your inbox for the verification Email.
If you did not receive any email, check your spam/promotion folder for an email with the subject "please verify your email".

Embed registration - This gives you the ability to grab an embed code for the registration form and easily embed it anywhere you'd like, for example, your corporate site. For instructions, see [Embed Registration](#) at the end of this article.

Embed registration You can embed the registration form in external pages. Click on the link to navigate to the embed settings page.
[Embed registration](#)

2. Configure the following:

enabled - Set to 'Yes' to enable the module.

requireRegistration - From the drop-down list, select which (if not all) of the registration user types are required to register:

- **SSO Only - Post Login** - Select this option if you want to present the registration form to any user after login through SSO authentication to the site. The "{site_URL}/register" URL will not be available for guests.
- **Form Users Only - Pre Login** - Select this option to present the registration form for guests, using the "{site_URL}/register" URL. SSO users login to the site will not be asked to register.

registrationCompleteTitle - Title of the page presented after the registration form has been submitted. If you don't type anything, the default text will be used.

registrationCompleteText - Text for the page presented after the registration form is entered. If you don't type anything, the default text will be used. Please note that `
` indicates the following text will start on a new line.

ssoRegistrationCompleteButtonLabel - Type the text you want for the button that will be presented for SSO users after the registration form has been submitted. If you don't type anything the default text will be used.

ssoRegistrationCompleteButtonUrl - Add the URL of the button that will be presented for SSO users after the registration form has been submitted.

ssoRegistrationCompleteTitle - Type the title of the page that will be presented for SSO users after the registration form has been submitted. If you don't type anything the default text will be used.

ssoRegistrationCompleteText - Type the text for the page that will be presented for SSO users after the registration form has been submitted. If you don't type anything the default text will be used.

emailVerification - Choose an option:

- **Enforce Verification** - Choose this option if you require users to verify their emails as part of the registration flow.
- **Skip Verification** - Choose this option if you don't require users to verify their emails as part of the registration flow.

verifyOnLogin - Choose an option:

- **Show** - This will show the "Verify My Email" link on the login page below the sign in button.
- **Hide** - This will hide the "Verify My Email" link on the login page below the sign in button. Users will be able to manually navigate to the link destination "{baseUrl}/registration/activate".

confirmationTitle - Type a title to show in the confirmation screen. If you don't type anything the default text will be used.

confirmationText - Type the text to show in the confirmation screen. If you don't type anything the default text will be used.

confirmationButtonLabel - Type text you want for the confirmation screen button. If you don't type anything the default text will be used.

postConfirmationTitle - Type a title you want to show on the post confirmation screen.

postConfirmationText - Type text you want to show on the post confirmation screen. If you don't type anything the default text will be used.

postConfirmationButtonLabel - Type text you want for the post confirmation screen button. If you don't type anything the default text will be used.

postConfirmationButtonUrl - Add the URL for the button that will be presented on the post confirmation screen.

noInviteCodeGroupId - Enter the group ID to assign users who DO NOT have an invite code.

marketoFormScript - Add Marketo form script if you want KMS to send registration information to Marketo after submission.

 For more information about Marketo integration, visit our article [Marketo Integration for Kaltura Events](#).

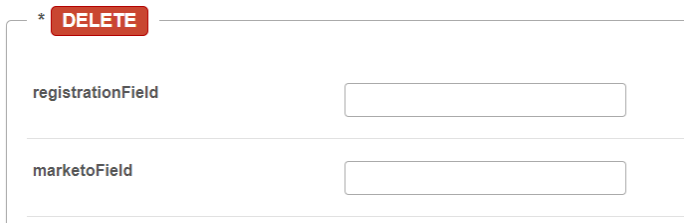

marketoMunchinScript - Marketo munchkin script to be added to head section in registration page.

postSubmitScript - Enter javascript code (without script tags) that will be executed upon successful registration.

marketoFieldsMapping - Fields mapping of registration form to Marketo fields.

- Click **+Add "marketoFieldsMapping"**.

A new window opens.

registrationField	<input type="text"/>
marketoField	<input type="text"/>

- Complete the fields for mapping:
registrationField
marketoField
- Repeat the process to map as many fields as desired.

marketoResponsetimeout - Enter the number of seconds to wait for Marketo response before timeout and moving to the next page.

registrationClosed - Selecting 'Yes' will render the registration closed view instead of the registration form.

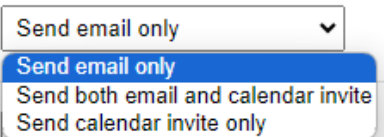

registrationClosedTitleText - Type the title you want to show in the registration closed view. If you don't type anything the default text will be used: *Registration is now*

closed.

registrationClosedDescriptionText - Type the description you want to show in the registration closed view. If you don't type anything the default text will be used: *Thanks for joining!*

 The following fields require you to choose an email template. Email templates are configured in the [emailtemplates module](#). Click the [Configure email templates](#) links provided to navigate directly to the EmailTemplates module in the admin console if you need to create a template.

registrationEmailType - Choose to send an email and/or a calendar invitation post-registration as the invitation email to the user. Once selected, make sure to choose the desired email template from the fields below. Note: to use calendar invitation, the **loginLogFrom** field in the [basesiteregistration module](#) must be populated.

A dropdown menu with the following options:

- Send email only
- Send email only
- Send both email and calendar invite
- Send calendar invite only

Calendar invite

With the Calendar Invite feature, when a user registers for an event, they'll receive both a confirmation email and an automated calendar invite (ICS file), which **blocks the event time in their calendar** to ensure it's easy to remember and attend.

If you selected **Send both email and calendar invite** or **Send calendar invite only**, the following additional configuration options display:

registrationEmailType Send calendar invite only ▼

iCalEmailTemplate Choose a template ▼

ssoiCalEmailTemplate Choose a template ▼

confirmationEmailTemplate Choose a template ▼

confirmationiCalEmailTemplate Choose a template ▼

returnUseriCalEmailTemplate Choose a template ▼

blockedEmailTemplate Choose a template ▼

unregisteredEmailTemplate Choose a template ▼

restrictDomains None ▼

invalidEmailMessage Your email address is not in the ar

iCalEmailTemplate - Choose an email template to use in the calendar invitation. The time and date will be taken automatically from the [basesiteregistration module loginLogFrom](#) field.

Note when creating an email template, you will need to use the **bodyAsText field**, as shown below (see our article [EmailTemplates module](#)).

bodyAsText

Used for the calendar invites only. While the body will be showed in the invite email (with HTML), the bodyAsText should be without any HTML and will be seen in the calendar invite itself. Tokens are still supported.

ssoiCalEmailTemplate - Choose an email template to use in the calendar invitation for SSO users. Time and date will be taken automatically from the [basesiteregistration module loginLogFrom](#) field.

confirmationiCalEmailTemplate - Choose an email template to use in the calendar invitation for auto-confirmed users. Time and date will be taken automatically from the [basesiteregistration module loginLogFrom](#) field.

returnUserCalEmailTemplate - Choose an email template to use in the calendar invitation for returning users who already have password from previous event to use their previous password in this event. Time and date will be taken automatically from the [basesiteregistration module](#) **loginLogFrom** field.

registrationEmailTemplate - Choose an email template to send registrants once they completed the registration form.

ssoRegistrationEmailTemplate - Choose an email template to send SSO users once they completed the registration form. You can set SSO domains the [Application module](#). Click the [Set SSO Domains](#) link to navigate directly to the application module.

confirmationEmailTemplate - Choose an email template to send registrants once they have confirmed their email address.

returnUserEmailTemplate - Choose an email template to inform returning users who already have a password from a previous event to use their password in this event - post-registration page.

blockedEmailTemplate - Choose an email template to inform blocked users that they are blocked on this event - post-registration page.

unregisteredEmailTemplate - Choose an email template to inform unregistered users that they are blocked on this event - post-registration page.

restrictDomains - You can choose to restrict email domains that are allowed to register. Blocked domains will not allow users to register with emails from these domains. Allowed domains will only permit users with these domains to register. Choose from the options:

- None
- Allowed domains
- Blocked domains

If you select **Allowed** or **Blocked Domains**, a window displays.

domainList

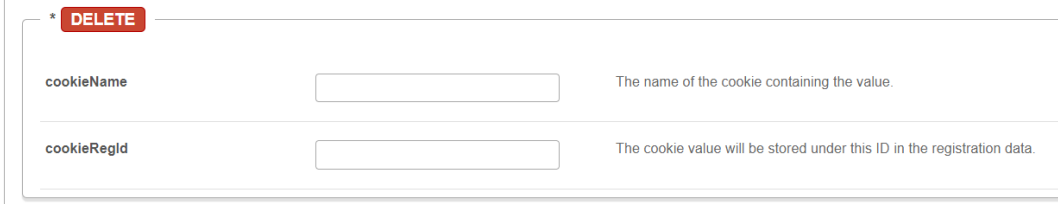

Upload a CSV or a XLS file, placing each restricted domain on a new line. To block all users from a specific domain, enter the domain name, for example, "youtube.com". To block a user name from all domains, enter "username@*".

invalidEmailMessage - Type a message to show users if their email domain is not approved. Your email address is not in the approved domains. If you don't type

anything the default text will be used: *Please use an approved email domain to log in.*

Cookies - If you want to enable the registration page to look for a cookie on the page, and save the value in it on the user's registration info, click the **+Add "cookies"** button.

A window displays.

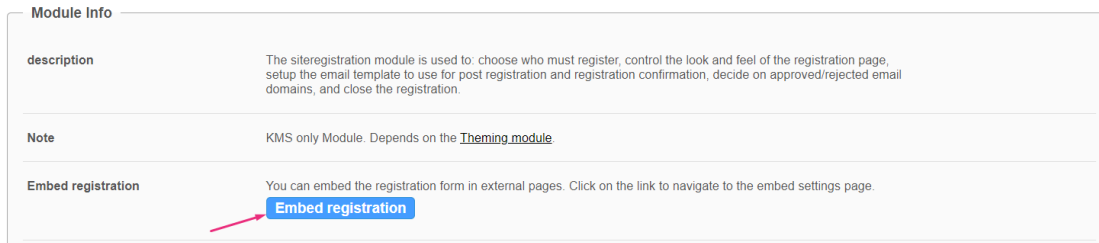

The screenshot shows a configuration window with a red "DELETE" button in the top left corner. Below the button, there are two input fields. The first field is labeled "cookieName" and has a placeholder text "The name of the cookie containing the value." The second field is labeled "cookieRegId" and has a placeholder text "The cookie value will be stored under this ID in the registration data."

- **cookieName** - Enter the name of the cookie containing the value.
- **cookieRegid** - Enter the matching ID to be stored in the user's registration data.

3. Click **Save**.

Embed registration

1. Go back to the top of the **Siteregistration** window and click **Embed registration**.

The screenshot shows a "Module Info" window with three sections: "description", "Note", and "Embed registration". The "Embed registration" section contains a blue button labeled "Embed registration" with a red arrow pointing to it. The text in the "Embed registration" section reads: "You can embed the registration form in external pages. Click on the link to navigate to the embed settings page."

The embed registration page displays.

Embed registration

utmsource

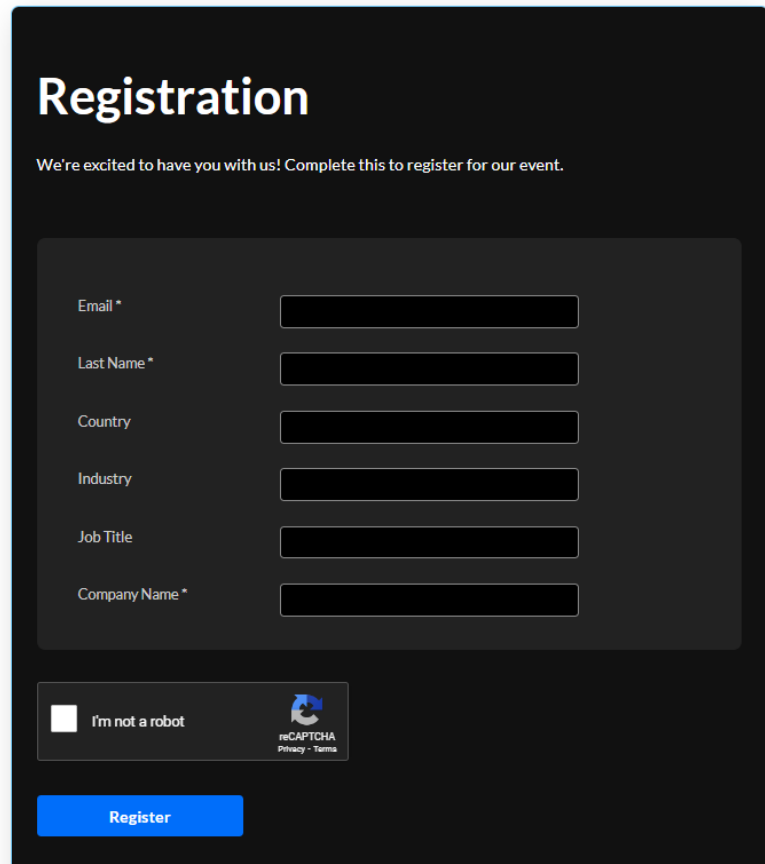

Embed code

```
<iframe
src="https://4834032.mediaspace.kaltura.com/r
egistration/embed?
embedId=e1694520609070&theme=dark"

```

[Copy embed](#)

Preview embed

2. Complete the following fields:

Theme - Select a theme from the dropdown menu, which includes the themes you've customized using the Theming module. Watch it instantly transform the preview on the right as you switch themes.

 See our article [Theme Editor](#) for more information.

Title - Type a title for your registration form. Leave empty to use the default text: *Registration*.

Description - Type a description or leave empty to use the default text: *We're excited to have you with us! Complete this to register for our event.*

Additional parameters

This section shows registration fields that were pre-filled when setting up your registration form, for example, a utmsource field:

Additional parameters

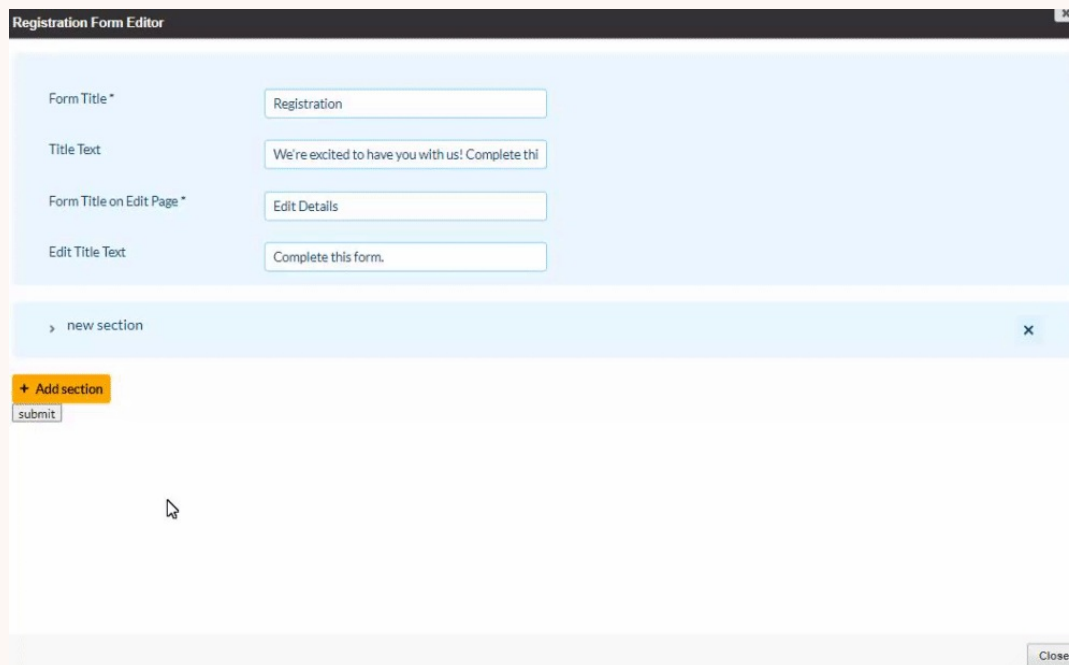

utmsource

Embed code

```
<iframe
src="https://4834032.mediaspace.kaltura.com/r
egistration/embed?
embedId=e1694520609070&utmsource=corpor
```

Copy embed

 The additional parameter values are configured in the [Registration Form Editor](#) in the [basesiteregistration module](#). The fields will only show if you check the box **Allow inserting values for this field via URL parameters** in the registration form, as demonstrated in the image below.

3. When you have finished completing the fields, click **Copy embed** to copy the code that you see in the window.

A success message displays: *Embed code copied to clipboard.*

You can repeat the process to create as many embeds as you want.
