

Events registration overview

Last Modified on 09/20/2023 7:32 pm IDT

Registration is where the attendee's journey begins. Kaltura's Virtual Events platform registration module was not only designed for scale, but also to inform content recommendations that help attendees create unique experiences for themselves.

Customize the registration form fields to ensure you collect the desired user "data." Ensuring an event registration process that is efficient and user-friendly.

In addition to the customization of the registration form, Kaltura provides additional security to confirm the authenticity of the registrant, such as ReCAPTCHA and email verification step.

 ReCAPTCHA is designed to determine if an online user is really a human, and not a bot. It prevents malicious software from enabling abusive activities.

Email verification is also a great way to prevent fake accounts and limit abusive user behavior.

The screenshot shows the Kaltura registration page. At the top, there is a teal header with the Kaltura logo and the text "Learn more about the Kaltura world". In the top right corner, there is a language selector "EN". Below the header, the main content area has a dark background. The title "Registration" is prominently displayed. Below the title, there is a short paragraph: "Getting to know you better will help us create an amazing Kaltura experience that universally welcomes everyone. Register now for deep-dive tech sessions, panels, shop talk, demos, music, art, and unexpected moments. Let's get started." Below this, it says "Required Fields *". The registration form itself is a dark grey box with several sections: "Choose your preferred language" with a dropdown menu set to "English"; "Please enter your contact information" which includes input fields for "First Name *", "Last Name", "Country/Region" (with a dropdown menu set to "Select Country/Region"), "City", "Postal Code", and "Phone".

Registration & Recommended Content

Kaltura understands that personalized suggestions help attendees not only avoid an overload of content but also help match the attendee with content based on their interests.

While attendees register for your event, they can choose their interests by selecting

them from the list of tags prepared by you.

These will be “tags” based on which attendees will see the recommended content carousel on the event homepage.
