

Listpage module

Last Modified on 09/12/2024 3:24 pm IDT

 This article is designated for administrators.

About

In the **Listpage module**, admins are able to create a new type of page containing a list of thumbnails with descriptions, each with links to external or internal pages.

 Note: KMS only Module. Depends on the [Theming module](#).

Page configurations

Enable the module, and start creating your pages. Click the **Add "listPage"** button to create a new page.

General page settings

Here are the general configurable options available for each page:

1. **Page Title** - Use the *pageTitle* field to set the top page title.
2. **Page Description** - Set a description to show at the top of the page using the *pageDescription* field.

The screenshot shows the configuration interface for a 'listPage'. At the top, it says 'listPage' and 'Add a new page with links.' Below this is a table with one row. The row has a '1' in the first column and a 'DELETE' button in the second. The main form area contains two fields: 'pageTitle' with the value 'Gamification' and a description 'Enter the title of the page. It will also show on the browser's tab'; and 'pageDescription' with a text area containing the text 'Kaltura hosts events, both online and in-person, bringing the cloud computing community together to connect, collaborate, and learn from Kaltura experts. Join us for hands-on workshops, technical sessions, live demos, and networking with Kaltura technical experts and your peers.'

Create the List

Use the **Add placeholdersList** button to create a new line in the list called a list item, or a placeholder.

For each placeholder, the following configs are available:

1. **Title** - Set the list item title from the *title* field.

2. **Description** - Set the list item title from the *description* field.
3. **Thumbnail** - Set the list item title from the *thumbnailUrl* field. A 16:9 aspect ratio is suggested.
4. **Links** - Setup links at the bottom of the list item, using the *Add buttons* button. Enter a link and a text for each

placeholdersList

The list of event placeholders

1 **DELETE**

title	<input type="text" value="GameWeek"/>	Enter the title of the links box.
description	<input type="text" value="GameWeek is a collaborative lear"/>	Enter a description for the links box.
thumbnailUrl	<input type="text" value="https://cfvod.kaltura.com/p/303138"/>	Upload a thumbnail for the links box.

3 **DELETE**

text	<input type="text" value="Learn More"/>	Link text.
link	<input type="text" value="https://event.kaltura.com/learnmor"/>	Link URL, will open in a new tab.

Gamification

Kaltura hosts events, both online and in-person, bringing the cloud computing community together to connect, collaborate, and learn from Kaltura experts. Join us for hands-on workshops, technical sessions, live demos, and networking with Kaltura technical experts and your peers.

GameWeek

GameWeek is a collaborative learning exercise that tests skills in implementing Kaltura solutions to solve real-world problems in a gamified, risk-free environment. This is a completely hands-on opportunity for technical professionals to explore Kaltura services, architecture patterns, best practices, and group cooperation.

 Each such placeholder can hold many links, however three to four is the recommended number, depending on the text of each button.

Publish your page

Each created page will have a Path making it available for users per the Permissions set in the config:

1. **Path/URL** - Select the custom page's URL using the **pageSlug** field.
 - a. Enter alphanumeric only with no spaces, with special care for capital letters (recommended not to use capital letters). Signs such as *Underscore* (" _ ") are accepted, however, do not use *Space* (" ").
 - b. The results will be a new URL in the application `https://{your_site_url}/{slug}` (e.g. Enter the slug 'help' to create a help page in the `https://mykmsite.kaltura.com/help` URL).
2. **Permissions** - Choose who can navigate to the selected page using the **permission** field.
 - a. The selection is of a minimum role, starting with everyone, up to a limited availability.
 - b. To allow this page for guests/anonymous users:
 - a. Set 'anonymousRole' to allow guests to view the page if your site is set to support anonymous users (set from the auth module).
 - b. If your KMS does not support anonymous users, choose 'guest override' to make this page public to all users.

 When choosing a path make sure it is available first. For example, the [Helppage](#) module provides a page in the /help path, do not use that path if that module is already used.

pageSlug	<input type="text" value="gamification"/>	Fill in the URL ending to allow a direct link for. The page URL will be {site_URL}/Slug
permission	<input type="text" value="guest override"/>	Select the minimum role allowed that can access this page. Set as 'anonymousRole' to allow guests to view the page. If your KMS does not support anonymous users, choose 'guest override' to make this page public to all.

Page example

Custom Links

Video has played a major role in enterprise learning for a while, but today's learners have higher expectations, greater needs, and far less time than ever before. How can L&D teams determine the right learning strategy for them and the role of video in it?
