OneDrive module

Last Modified on 08/12/2024 6:23 pm IDT

The OneDrive module provides the ability for users to ingest content from their personal OneDrive folder by adding an 'Add from OneDrive' button in the Add New menu.

Field	Description
enabled	Enable the OneDrive module.
allowedRoles	Select the minimum role to be able to import files from OneDrive.
applicationId	Enter the application (client) ID from the application page in Microsoft Azure.
