

How to extract Live Analytics Using Adobe Omniture Plugin?

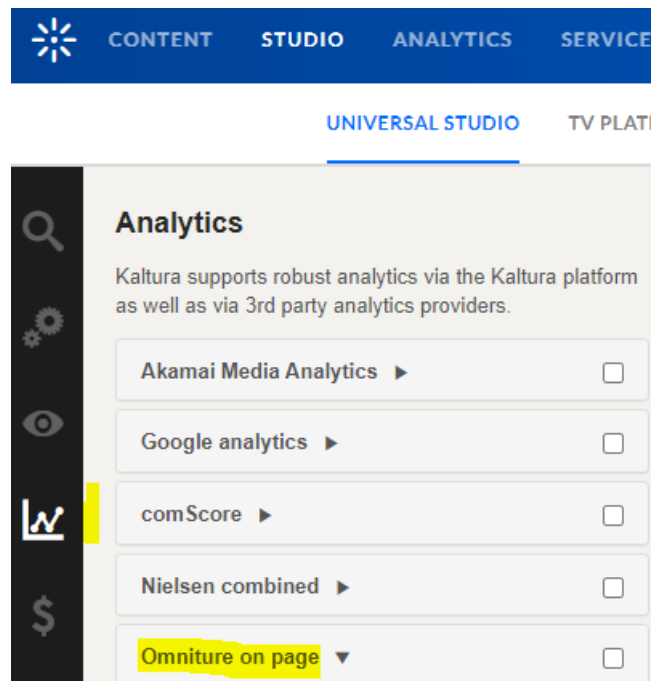

Last Modified on 06/21/2023 1:24 pm IDT

 Please note Omniture SiteCatalyst is now Adobe Analytics.

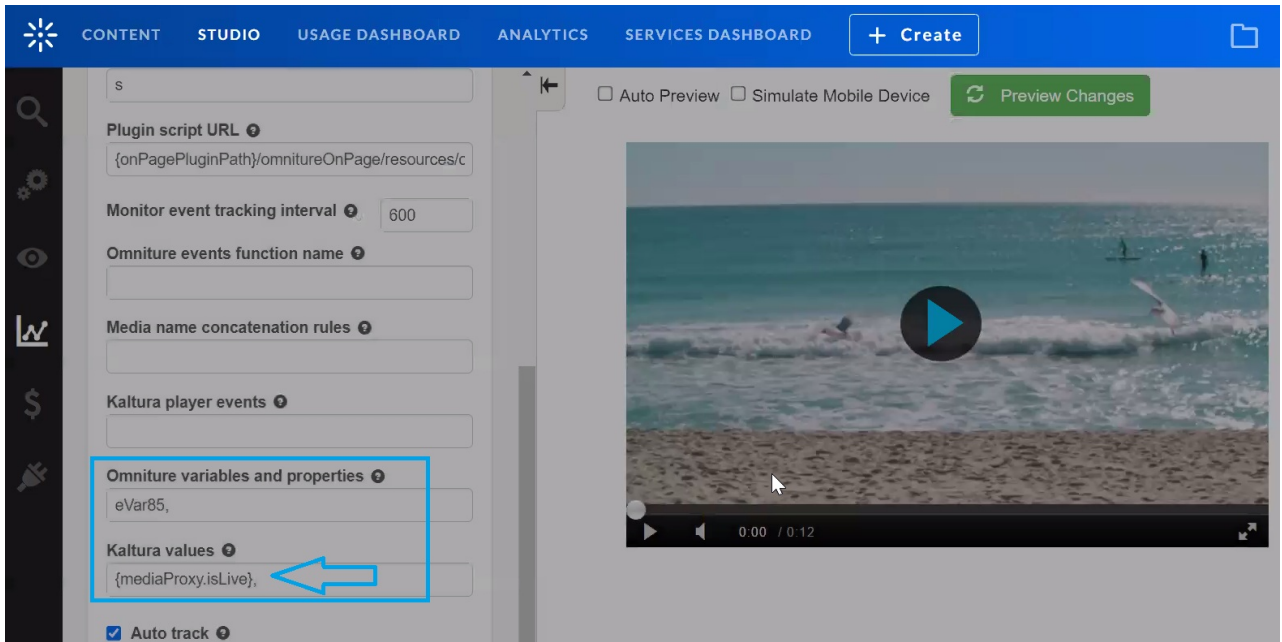

This guide demonstrates how to add a variable onto the Kaltura V2 Player to distinguish between live and VOD entries, using the 3rd party analytics plugin, Adobe Omniture.

To extract Live Analytics Using Adobe Omniture Plugin

1. Login to KMC and navigate to the Studio tab.
2. Click on the player with the Omniture plugin setup
The player setting menu is displayed.
3. Click on the Analytics tab.
4. Select Omniture on page

5. Add in Kaltura Values the variable **{mediaProxy.isLive}**, followed by a comma (it will not work without a comma).

⚠ To test this, you may create a test Live event and view it with the player with the Omniture plugin. Click F12 to open Chrome Dev Tools, and check for the Payloads True stats.
