

InContext category - Kaltura integration with LMS

The InContext sub-category is only used when media is embedded as a mashup. It does not apply any restrictions on the video, as it is not considered a course category. Meaning, InContext allows for the video to display embedded inside an LMS course, which is outside of the Kaltura entitlement system.

Alternately, if the student uploads a media file via **Add new - Media Upload** (and not via Mashup Tool) and then publishes it to a specific course, the entry will be listed under the course/d category, as it's being redirected to the Media Gallery of that course.

We do not recommend touching these categories, as they represent a specific part of the Kaltura integration with LMS.
