This article is designated for administrators.

About

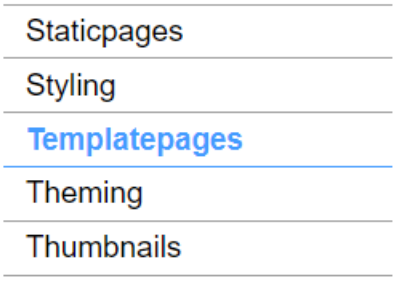
You can use the **Templatepages module** to create multiple pages containing different components suitable for each page.

Once a template page has been configured, use the CustomPages module to set it with its own unique URL and permissions. To learn more, visit Create a custom page in Content Hubs using template pages.

Applies exclusively to Content Hubs. The Theming module must be enabled.

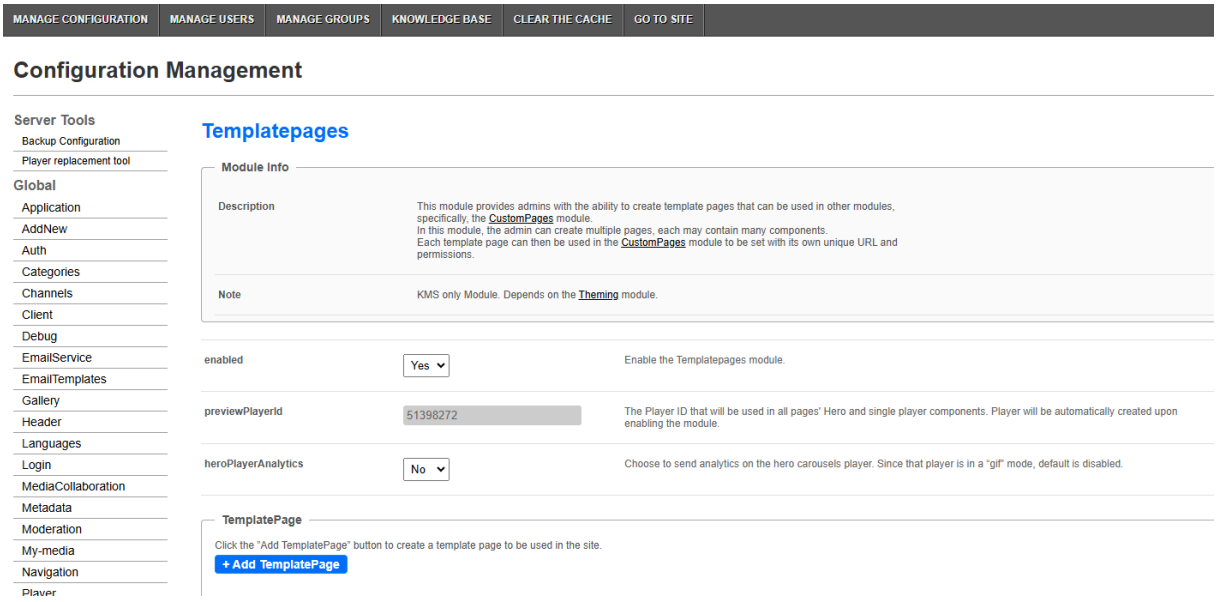
Configure

1. Go to your Configuration Management console, and select the **Templatepages** module. You can also navigate directly using a link: https://{your_site_url}/admin/config/tab/templatepages.



The 'Templatepages' page displays.

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.



2. Configure the following:

enabled - Set to 'Yes' to enable the module.

previewPlayerId - This is the player ID that will be used for hero and single player components across all pages. The player will be automatically created upon enabling the module.

heroPlayerAnalytics - By default, player analytics for the hero banner on template pages are disabled because the player operates in a "gif" mode. To activate analytics for the hero carousel player, simply set to 'Yes' to enable this option.

Create a template page

1. Click the **+Add TemplatePage** button.

2. Configure the following page fields:

pageName - Defines the internal page name displayed in other modules when selecting a template page, for example, in the Custompages module.

pageTitle - Defines the browser tab title.

pageHeader - Defines the page header displayed when using a hero section.

Configure page elements

Template pages support three main page elements:

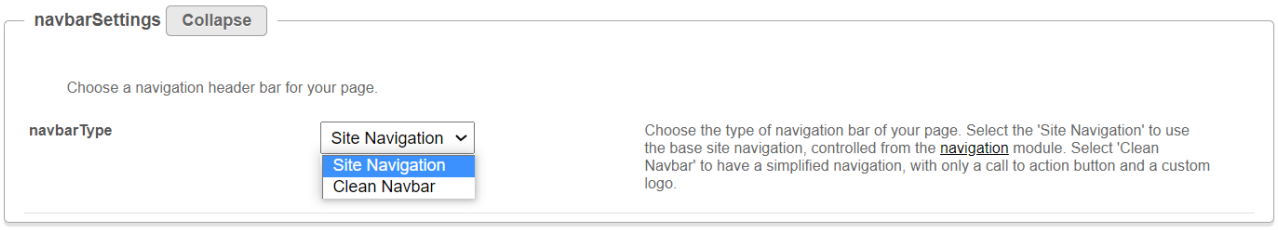
- Navigation Bar
- Hero section
- Components

Below you will find the information on each type.

Configure the navigation bar

Each landing page includes a navigation bar. Available navigation types include:

- Site Navigation
- Clean NavBar



Site navigation

Displays the standard site navigation configured in the Navigation module, and will be the same on all the site's pages.

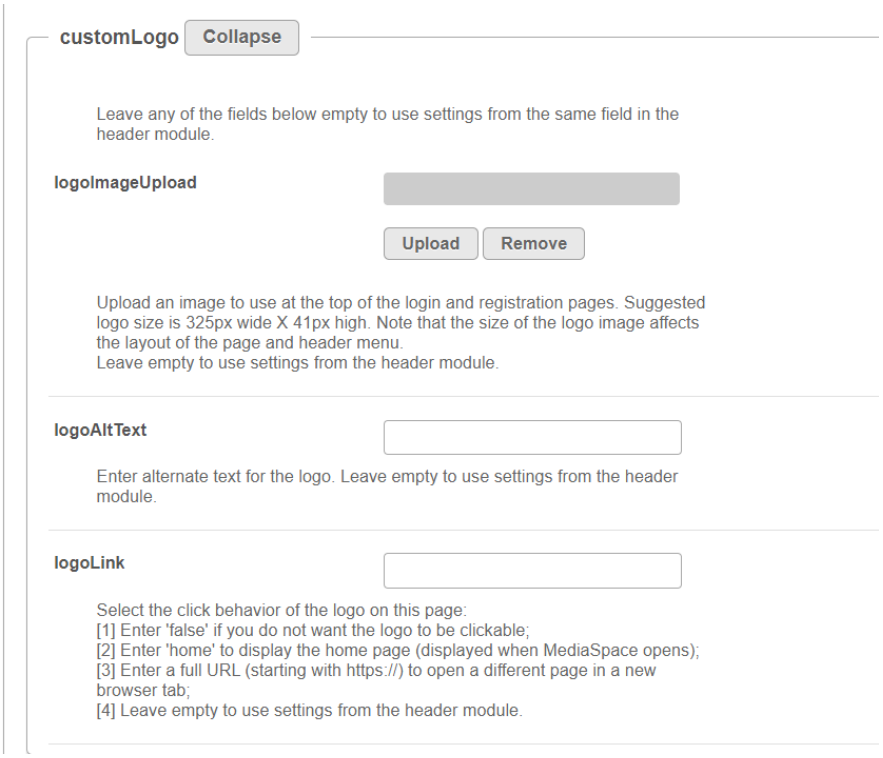
Clean navbar

Displays a simplified navigation bar with:

- Custom logo
- CTA button
- Optional language selector

If you choose a clean navbar, additional fields display:

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.



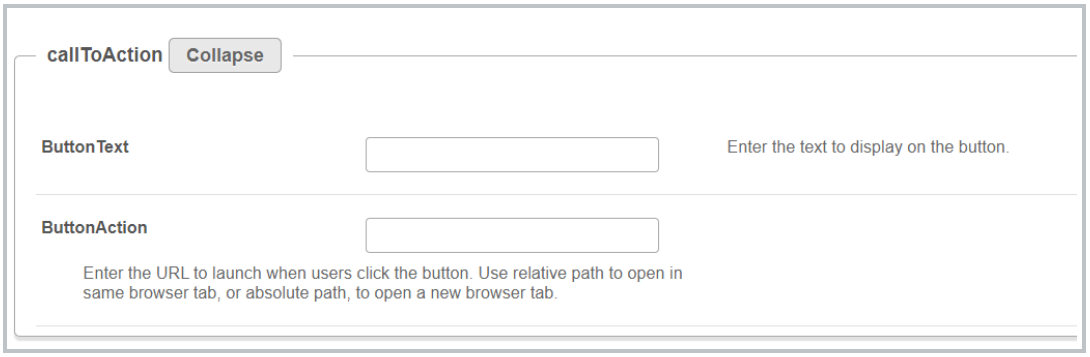
Configure the following fields:

logoImageUpload - Upload your own or use the site's logo.

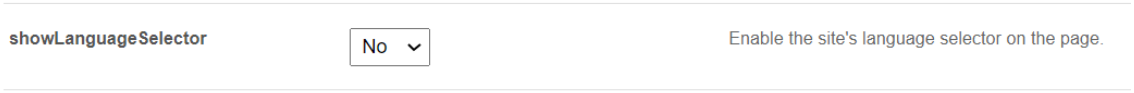
logoAltText - Enter alternate text for the logo.

logoLink - Select the click behavior of the logo.

If you'd like to have a call-to-action button, fill in the **callToAction** section.



If you'd like to present the language selector (assuming it is available on the site), set the **showLanguageSelector** field to 'Yes'.



Configure hero sections

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

Hero sections control the top area of a landing page and provide the main entry experience for users.

Available hero section types include:

- Player Carousel
- Text & Counter

For detailed configuration instructions, see Configure hero sections for landing pages.

Configure landing page components

Landing page components populate the body of the page with media, text, playlists, banners, registration flows, interactive content, custom HTML, and single videos.

For detailed component configuration instructions, see Configure components for landing pages.

Save the template page

After configuring the template page, click **Save** at the bottom of the page.

Saving the page also clears the site and module cache.

Configure page URLs and permissions

After creating a template page, use the CustomPages module to:

- Assign a page URL
- Configure permissions
- Control page visibility
- Configure page access behavior

To configure a homepage using a template page, see Set up a homepage in Content Hubs.
