# Custompages module

Content updated: 04/06/2022

**This article is designated for administrators.**

## About

The **Custompages** module lets you create additional site pages using templates from the TemplatePages module. With this module, you can select a template, set its URL and permissions, and publish the page with ease.

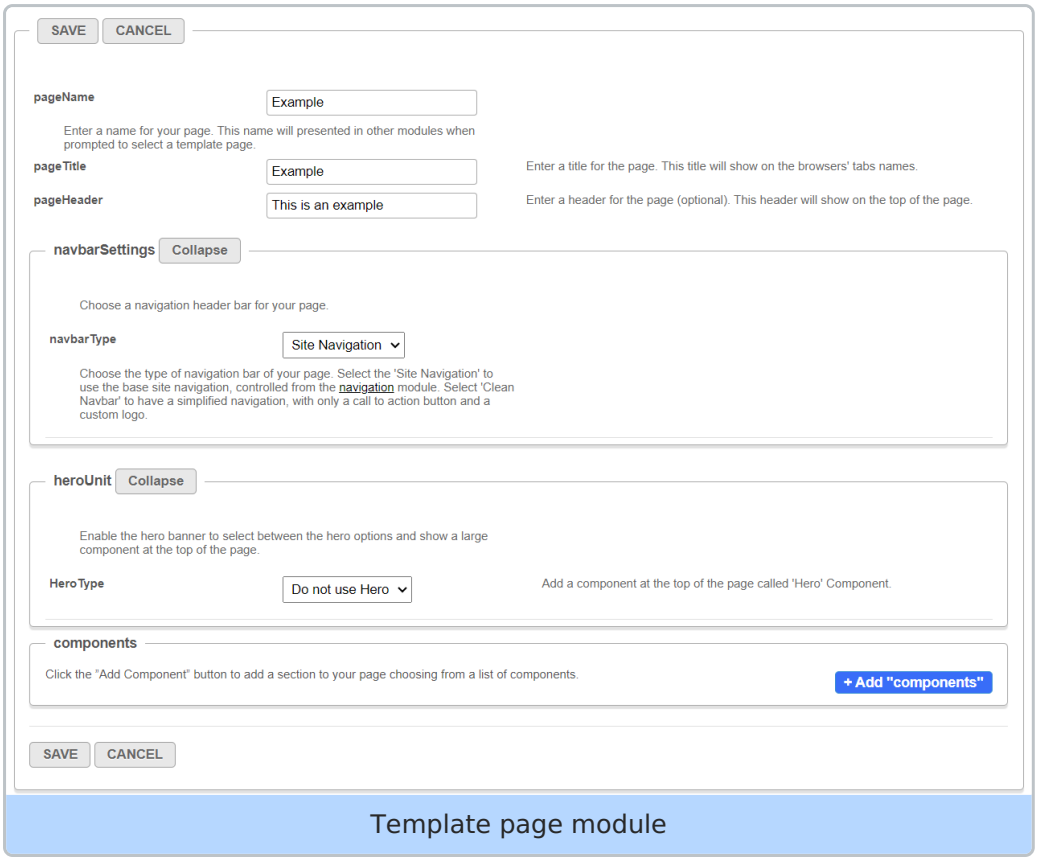

For step-by-step guidance on templates and custom pages, check out our article Create and use a template page.

This module is available for Content Hubs.

## Before you start

To use the **Custompages** module, you must first create at least one page in the Templatepages module. In our example below, we have created a template page called 'Example'.

## Configure

1. Go to your Configuration Management console, locate the **Custompages** module in the left panel, then select it. You can also navigate directly using a link: https://{your_site_URL}/admin/config/tab/custompages.

The Custompages page displays.

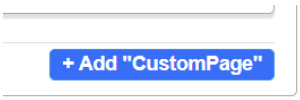

2. Configure the following:

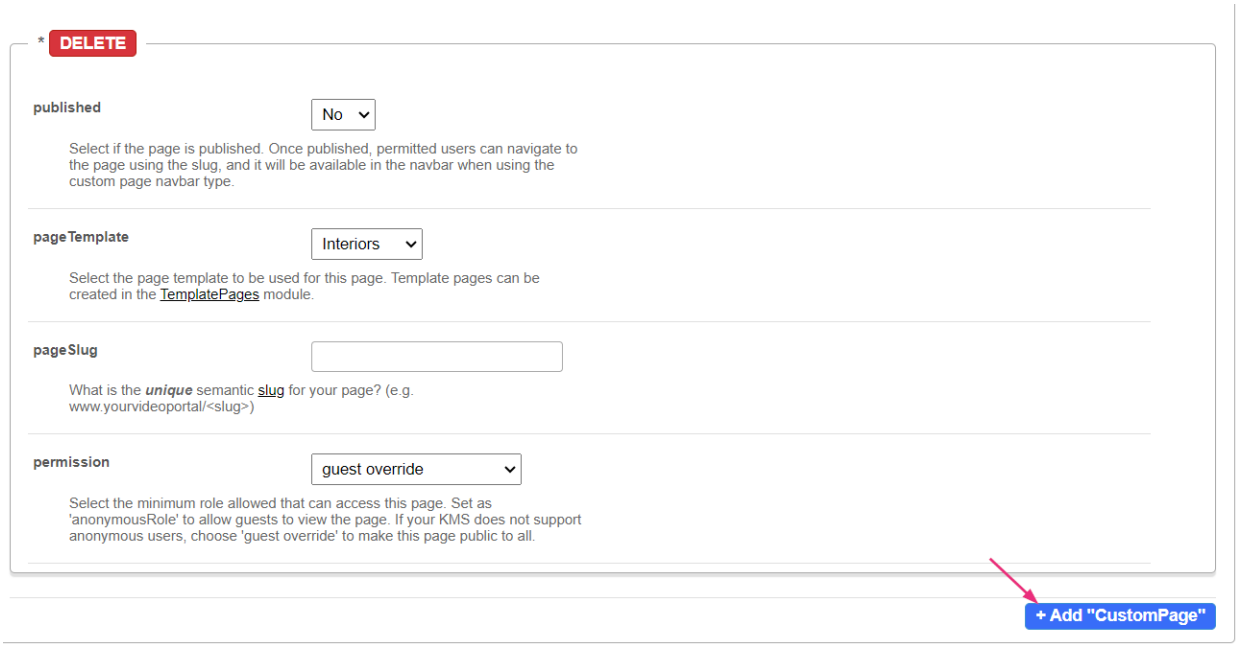

**enabled** - Set to 'Yes' to enable the module.

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

Click the **+ Add "CustomPage"** button to add your templatepage to the site.

A new section displays.

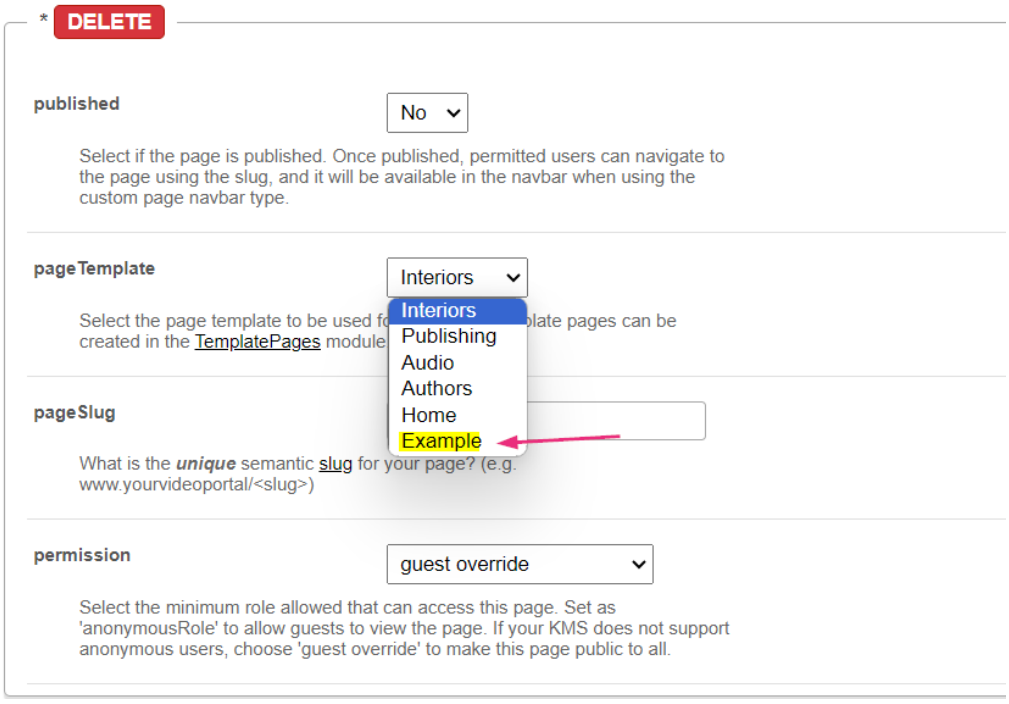

Set the following fields to enable your new custom page and determine its availability:

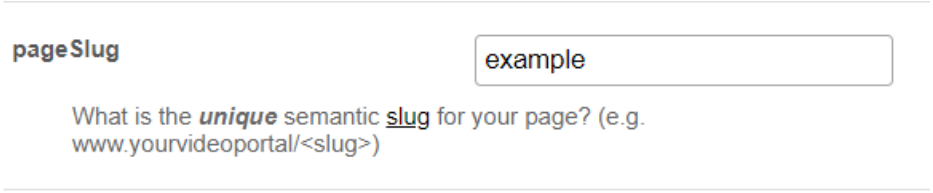

**published** - When your page is ready to be used, set the **published** field to 'Yes'. Once published, users with permission can view the page. As long as it is set to 'No', the page won't be available to any user.

**pageTemplate** - This field provides a drop-down menu of the templates you created in the templatepages module. Select the desired template page. Below you can see that the example template page we created is now in the menu:

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

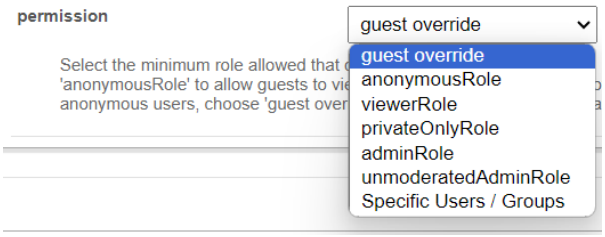

**pageSlug** - Enter a unique semantic slug for your page. This will create a new URL in the format `https://{your_site_url}/{slug}`. For example, entering the slug 'help' will create the URL .

Users with permission can access the page using the slug. You can also add the page to the navigation menu. For more details, see our article Navigation module.

Use only alphanumeric characters without spaces. While underscores ("_") are allowed, avoid using capital letters and spaces.

**permission** - Select the minimum role needed to access this page.

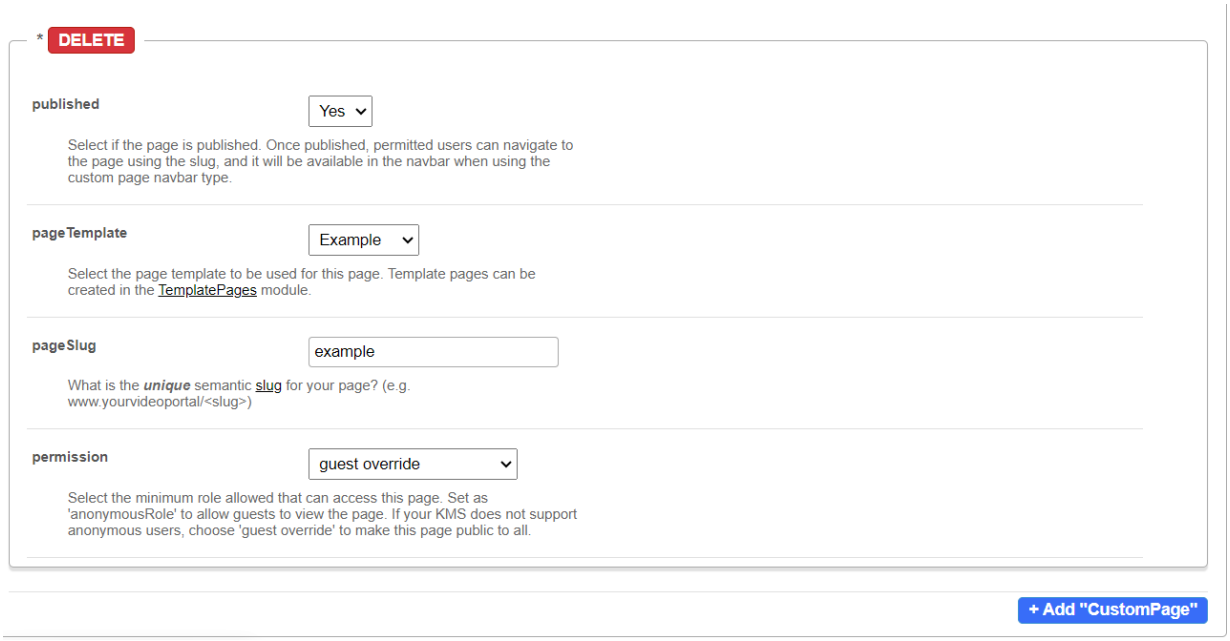

Use **anonymousRole** to allow guests to view the page if your site is set to support

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

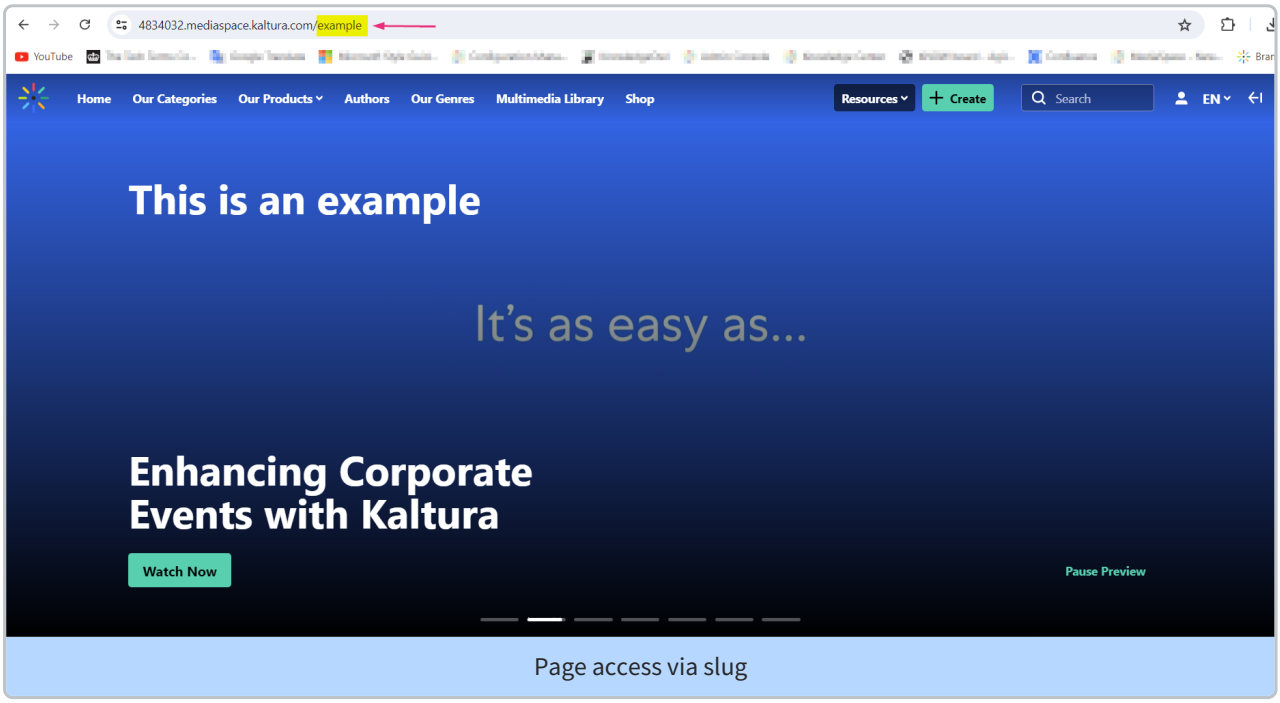

anonymous users (set in the Auth module). If not, choose **guest override** to make the page public.

3. Scroll to the bottom of the page and click **Save**.

Below is the final configuration:

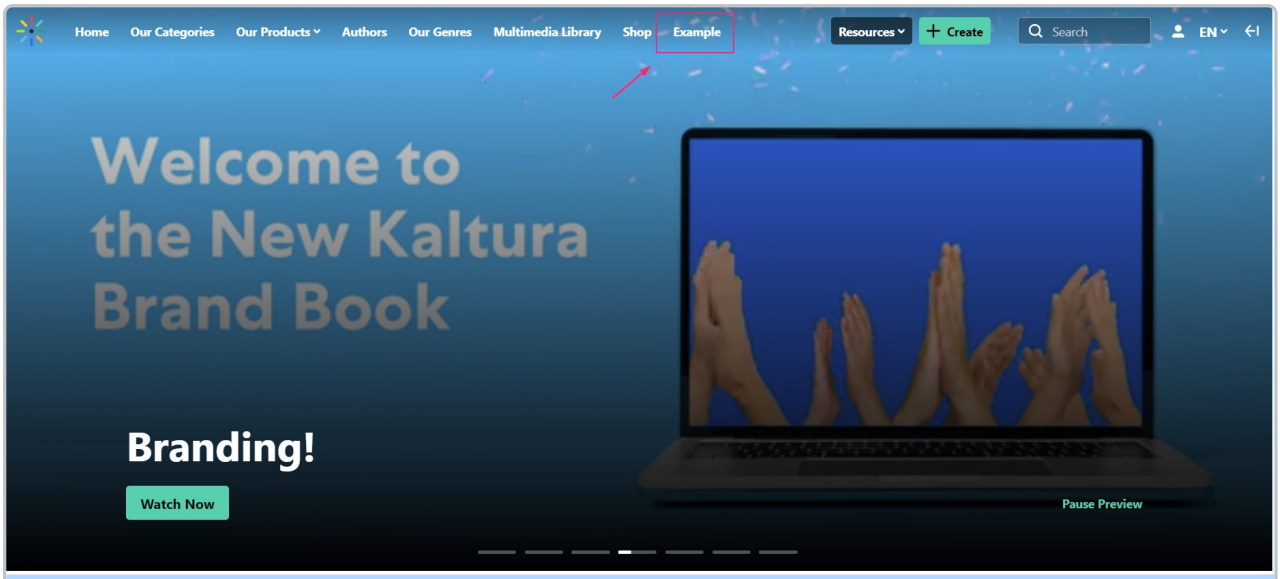

## User experience

Page access via slug
