

Upgrade Kaltura LMS Video integration for Canvas from LTI 1.1 to LTI 1.3

Last Modified on 06/14/2026 7:44 pm IDT

 This article is designated for administrators.

About

This article explains how to upgrade the Kaltura LMS Video integration for Canvas from LTI 1.1 to LTI 1.3.

The integration is implemented using LTI external tools, added via an LTI Developer Key in Canvas.

Update - June 2026

Recent changes to Canvas have affected the process for creating new Scoped API Developer Keys.

Kaltura is currently working with Instructure to validate a revised configuration process. Until updated instructions are available, the steps for creating and configuring a new Scoped API Developer Key in this article may not work as expected.

As of the publishing of this update, existing Canvas integrations and previously created Scoped API Developer Keys continue to function normally.

If you are setting up a new Canvas integration or have questions about updating an existing Canvas integration, contact your Kaltura representative before proceeding.

Changes in user experience

Canvas does not support multiple tools by the same vendor in the same tool placement. With LTI 1.3, you can no longer have both [My Media](#) and [Media Gallery](#) together in the course navigation as was possible with LTI 1.1.

For more information, see section [Canvas LTI tool placements](#) below.

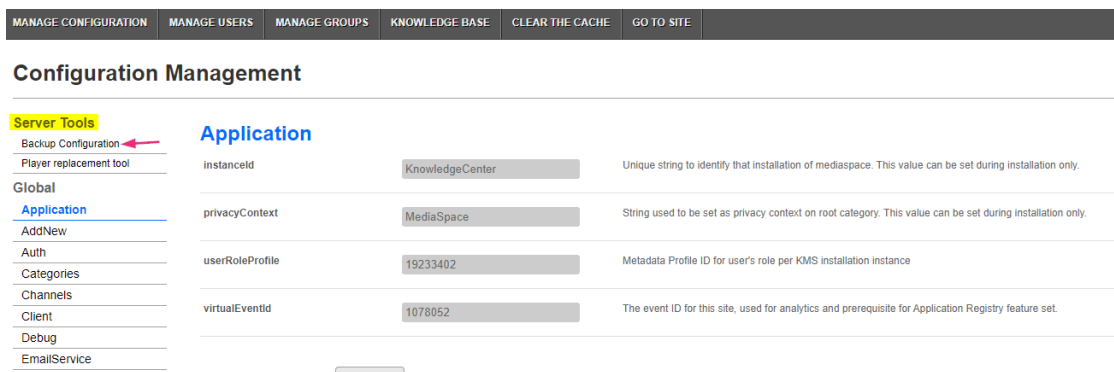

Existing embedded videos created under LTI 1.1 will continue to work.

Prerequisites

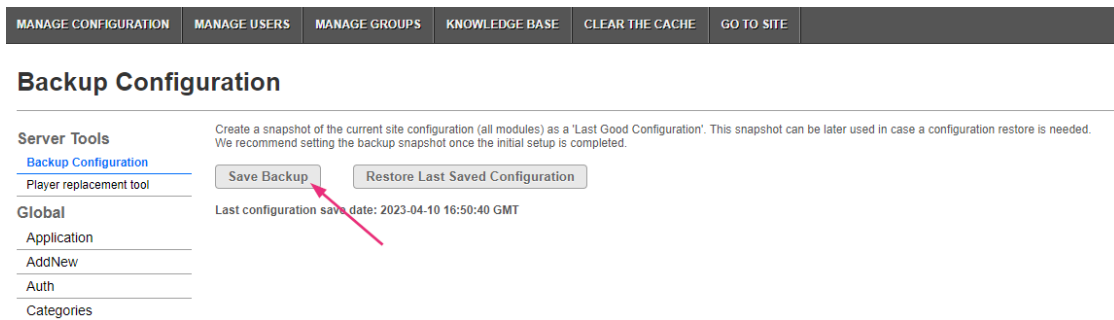

- A Kaltura administrator account
- Kaltura LMS Video integration for Canvas, minimum version 5.99.46
- A Canvas administrator account

Step 1 - Backup your configuration

1. Log into your Configuration Management console (https://{your_KAF_base_URL}/admin).
2. Under **Server Tools**, click **Backup Configuration**.

3. On the 'Backup Configuration' page, click **Save Backup**.

A confirmation message displays: *Are you sure you want to save current configuration? Remember that previous backups will be deleted.*

4. Click **Yes, Save**.

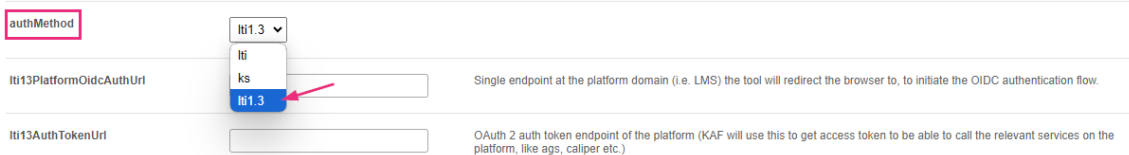

Once the backup is complete, you'll see a confirmation message: *Configuration file was saved successfully.*

The backup page will display the 'last configuration save date', which reflects the date when the configuration settings were last modified, not the date the backup was performed.

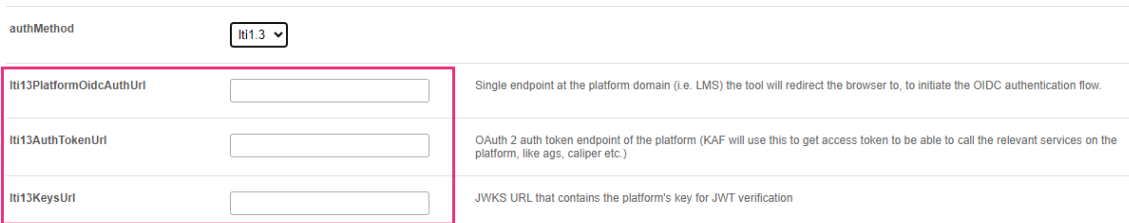

Step 2 - Enable LTI 1.3

1. In your Configuration Management console, navigate to the [Hosted module](#).
2. On the Hosted module page, locate the **authMethod** field and select **lti1.3** from the dropdown.

The screenshot shows the configuration interface for the LTI 1.3 module. The **authMethod** dropdown is highlighted with a red box and set to **lti1.3**. A red arrow points to the selected option. Below it, the **lti13PlatformOidcAuthUrl** field is visible, with a red arrow pointing to its input box. The **lti13AuthTokenUrl** field is also visible below it.

An additional section displays.

The screenshot shows the configuration interface for the LTI 1.3 module. The **authMethod** dropdown is set to **lti1.3**. Below it, the **lti13PlatformOidcAuthUrl**, **lti13AuthTokenUrl**, and **lti13KeysUrl** fields are highlighted with a red box. The **lti13PlatformOidcAuthUrl** field is empty, and the **lti13AuthTokenUrl** and **lti13KeysUrl** fields are also empty.

3. Configure the following fields:

- **lti13PlatformOidcAuthUrl** = `https://{your_Canvas_Domain}/api/lti/authorize_redirect`
- **lti13AuthTokenUrl** = `https://{your_Canvas_Domain}/login/oauth2/token`
- **lti13KeysUrl** = `https://{your_Canvas_Domain}/api/lti/security/jwks`

4. Scroll down to the **LTI3service** section and click **Generate key pair here**.

lti13ServicePrivateKey

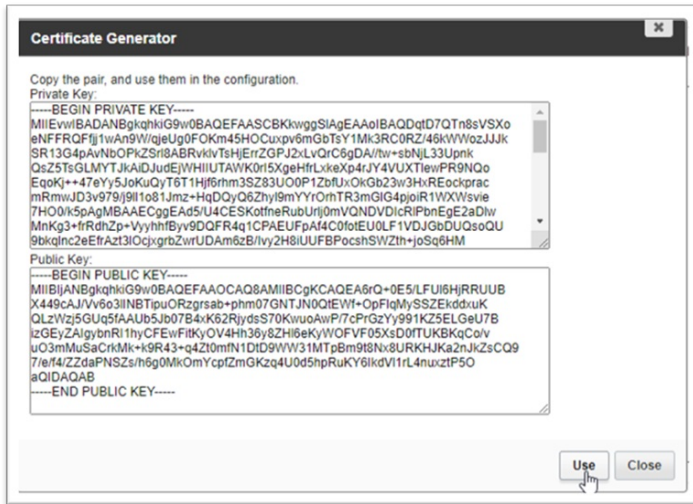

Service Private Key - this is used to sign the JWT or other calls done from KAF to the platform like in Deep Linking Response. You can [generate key pair here](#)

The screenshot shows the **lti13ServicePrivateKey** field. A red arrow points to the **generate key pair here** link in the text above the field.

This generates the keys.

5. In the Certificate Generator window, click **Use** to have the key pairs saved to the **lti13ServicePrivateKey** and **lti13ServicePublicKey** fields.

6. Scroll to the bottom of the Hosted module page and click **Save**.

Step 3 - Generate LTI developer key JSON

Enter the following URL in your browser: `https://{your_KAF_URL}/canvas/config/create-json-for-instance` Example: `https://12345.kaf.kaltura.com/canvas/config/create-json-for-instance`

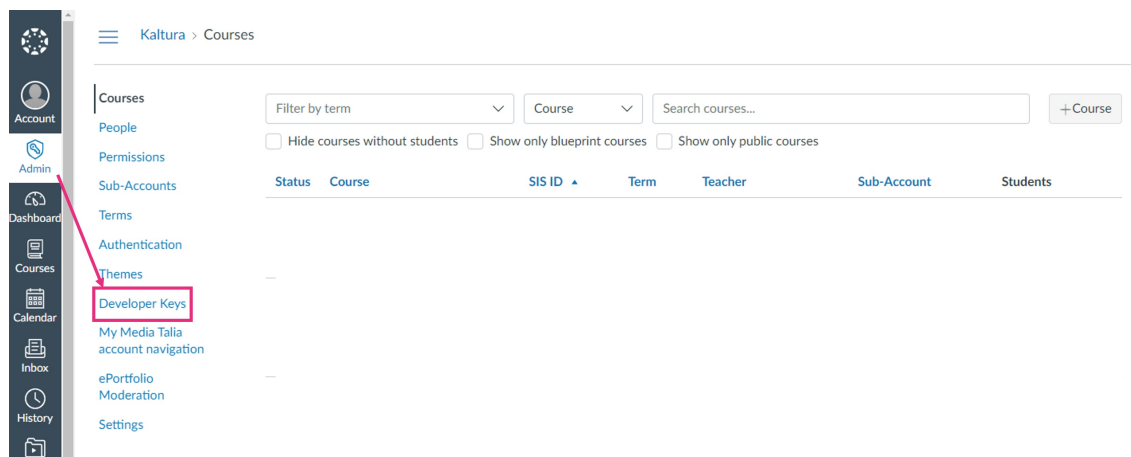

If you're using a KAF domain other than `.kaltura.com`, make sure to use it as the input for your_KAF_URL.

The JSON will be used in the next step to create the LTI developer key.

Step 4 - Create LTI developer key

1. Log into your Canvas instance as an administrator.
2. Click the **Admin** tab.
3. Click the **Developer Keys** tab.

The **Developer Keys** page displays.

3. Scroll down to the **LTI Advantage services** section and click to expand the section.

LTI Advantage Services

Services must be supported by the tool in order to work. Check with your Tool Vendor to ensure service capabilities.

- Can create and view assignment data in the gradebook associated with the tool.
- Can view assignment data in the gradebook associated with the tool.
- Can view submission data for assignments associated with the tool.
- Can create and update submission results for assignments associated with the tool.
- Can retrieve user data associated with the context the tool is installed in.
- Can update public jwk for LTI services.
- Can lookup Account information.
- Can view Progress records associated with the context the tool is installed in.
- Can view the content of a page the tool is launched from.

4. Make sure the following **LTI Advantage services** are turned on in addition to others that are enabled:

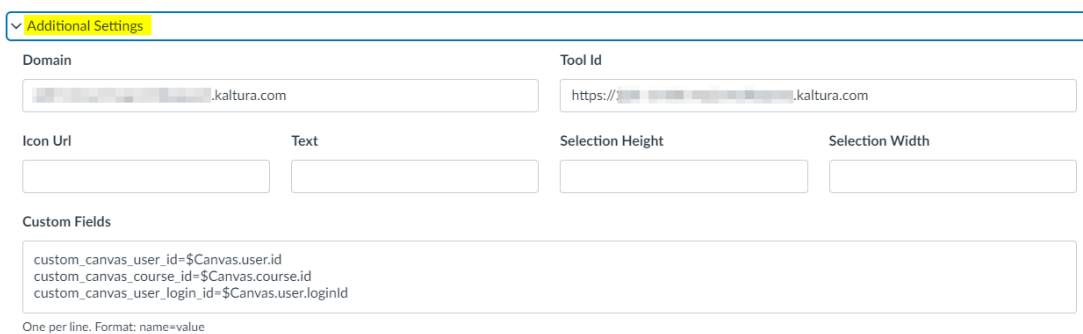

- Can create and view assignment data in the gradebook associated with the tool.

- Can view assignment data in the gradebook associated with the tool.
- Can view submission data for assignments associated with the tool.
- Can create and update submissions for assignments associated with the tool.
- Can retrieve user data associated with the context the tool is installed in.
- Can update publish jwk for LTI services.

5. Click **Save** if you have made any changes.

Step 6 - Confirm values in LTI developer key additional settings

1. Click **Additional Settings** to expand the section.

2. Review the following fields:

- **Domain** - your KAF domain without the `https://`
- **Tool Id** - your KAF URL including `https://`
- **Icon Url, Text, Selection Height, Selection Width** - leave blank
- **Custom Fields** - include the following three custom parameters:
 - `custom_canvas_user_id=$Canvas.user.id`
 - `custom_canvas_course_id=$Canvas.course.id`
 - `custom_canvas_user_login_id=$Canvas.user.loginId`

Step 7 - Confirm or edit LTI developer key placement settings

Clicking on the bubble in the placements box will delete the placement. To edit a placement, click on the `>` icon to the left of each placement listed.

> LTI Advantage Services

> Additional Settings

Placements

Link Selection x Course Navigation x Global Navigation x Editor Button x Assignment Selection x

> Link Selection

> Course Navigation

> Global Navigation

> Editor Button

> Assignment Selection

Canvas only allows each placement to be used once per developer key. The JSON file generated by Kaltura includes five placements.

Review and edit the **Text** field for each tool placement as needed:

- **Link Selection:** For the Kaltura Browse Search and Embed tool, used to create video pages.
- **Course Navigation:** For the Kaltura Course Media Gallery.
- **Global Navigation:** For the Kaltura My Media tool in the global left-hand navigation.
- **Editor Button:** For the Kaltura Browse Search and Embed tool in the Canvas Rich Content Editor.
- **Assignment Selection:** For the Kaltura Interactive Video Quiz in the Canvas Assignment tool.

Step 8 - Set 'lti13ClientID' value for LTI developer key

1. In Canvas, navigate to the [Developer Keys page](#) (https://{your_Canvas_base_URL}/accounts/1/developer_keys).
2. On the **Developer Keys** page, locate the listing for the developer key you created in [Step 4 - Create LTI Developer Key](#) and copy the **Client ID** from the **Details** column.

Developer Keys

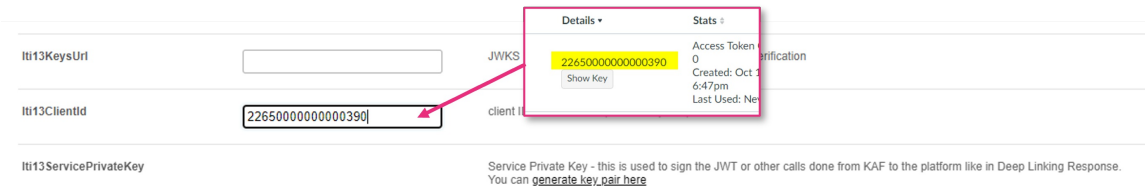

Account Inherited

All ▾ Clear

+ Developer Key

Name ▾	Owner Email ▾	Details ▾	Stats ▾	Type ▾	State ▾	Actions
Kaltura Video Plugin	No Email	<div style="border: 1px solid #ccc; padding: 2px;"> 2265000000000390 Show Key </div>	Access Token Count: 0 Created: Oct 14 at 6:47pm Last Used: Never	🔑	🟢	🗑️

3. Log into your Configuration Management page (https://{your_KAF_base_URL}/admin).
4. Navigate to the [Hosted module](#) (https://{your_KAF_base_URL}/admin/config/tab/hosted).
5. Scroll down to the **Iti13ClientID** field and paste in the **Client ID**.

The screenshot shows the configuration page for the Hosted module. The field **Iti13Clientid** is highlighted with a red box and contains the value `2265000000000390`. A red arrow points from this field to the **Details** dropdown menu in the Developer Keys table above, which also shows the same Client ID value highlighted in yellow.

6. Scroll to the bottom of the Hosted module and click **Save**.

Step 9 - Configure Kaltura user ID value

The default Kaltura User ID is your Canvas User ID, which is often the same as the user's email address. If your organization uses a different value for User IDs, please refer to [Configuring the Kaltura User ID Value to Use with Your LMS Integration](#) before proceeding.

With the Kaltura LMS integration, user ID records are passed from the LMS to Kaltura during the LTI Launch. When using LTI 1.3 authentication, admins can configure which LTI attribute to use for the user ID in the KAF Hosted module.

Kaltura uses a custom parameter in Canvas to store the User ID value. To set this up:

1. Log into your Configuration Management page (https://{your_KAF_base_URL}/admin).
2. Navigate to the [Hosted module](#)

(https://{your_KAF_base_URL}/admin/config/tab/hosted).

3. Scroll down to the **ItiUserIdAttribute** setting.
4. Set **ItiUserIdAttribute** to **custom_canvas_user_login_id**.
5. Scroll to the bottom of the Hosted module and click **Save**.

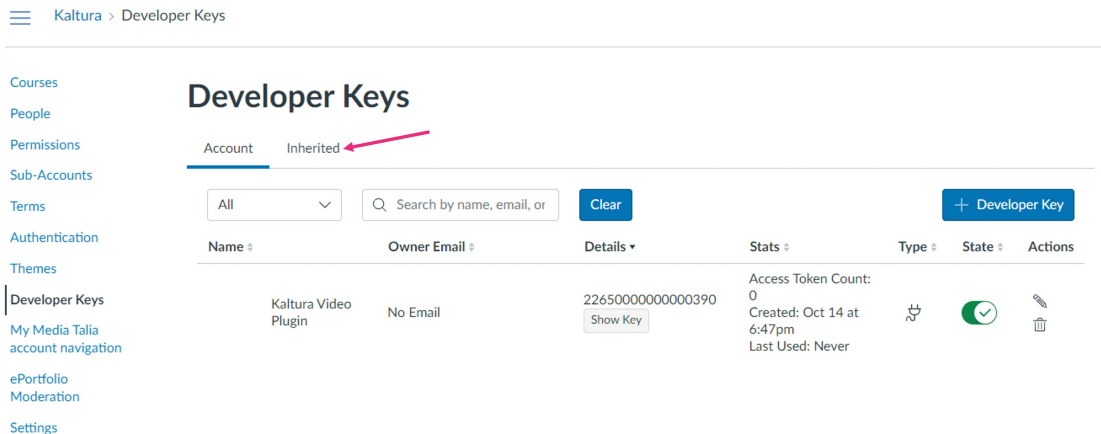

Step 10 - Set API developer key

Option 1 - Inherited API Key

If your KAF domain is on `*.kaltura.com`, you can use the existing inherited Kaltura key without creating a new API key. You may, however, prefer to use a Scoped API Developer Key. In that case, jump to **Option 2** below.

1. Log into Canvas as an administrator.
2. Navigate to the [Developer Keys](#) page.
3. On the **Developer Keys** page, click the **Inherited** tab.

Kaltura > Developer Keys

Developer Keys

Account Inherited

All Search by name, email, or Clear + Developer Key

Name	Owner Email	Details	Stats	Type	State	Actions
Kaltura Video Plugin	No Email	2265000000000390 Show Key	Access Token Count: 0 Created: Oct 14 at 6:47pm Last Used: Never		On	

4. Scroll down and click **Show All Keys**.
5. Scroll to the listing for the Kaltura key and click the toggle to enable it.

6. A confirmation message displays: *Are you sure you want to change the state of the developer key [name]?*
7. Click **Switch to On**. When the key is enabled, it turns green.

Go to [Step 12 - Add Kaltura tools](#).

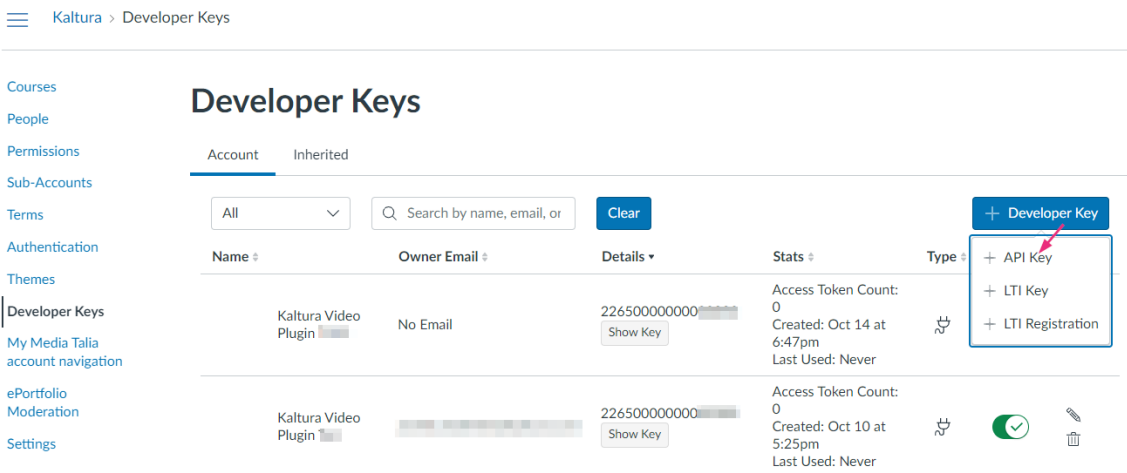

Option 2 – Scoped API developer key

Important

Recent Canvas changes have affected the process for creating new Scoped API Developer Keys. See the update notice at the top of this article before proceeding with Option 2.

If your KAF domain is not on *.kaltura.com, or you prefer added security, you'll need to create a Scoped API Developer Key.

1. Log into Canvas as an administrator.
2. Navigate to the [Developer Keys](#) page.
3. On the **Developer Keys** page, click on **+ Developer Key** and select **+ API Key** from the drop-down list.

The screenshot shows the 'Developer Keys' page in Canvas. On the left is a navigation sidebar with options like Courses, People, Permissions, Sub-Accounts, Terms, Authentication, Themes, Developer Keys, My Media Talia account navigation, ePortfolio Moderation, and Settings. The main content area has a 'Developer Keys' title and tabs for 'Account' and 'Inherited'. Below the tabs is a search bar with 'All' selected and a 'Clear' button. A table lists developer keys with columns: Name, Owner Email, Details, Stats, and Type. Two keys are listed, both for 'Kaltura Video Plugin'. The first key has 'No Email' and a 'Show Key' button. The second key has a masked email and a 'Show Key' button. To the right of the table is a '+ Developer Key' button with a dropdown menu open, showing options: '+ API Key', '+ LTI Key', and '+ LTI Registration'. A red arrow points to the '+ API Key' option.

The **Key Settings** page displays.

- url:GET|/api/v1/courses/:course_id/students GET

7. Check the following scopes:

- url:GET|/api/v1/courses
- url:GET|/api/v1/courses/:id

8. Scroll down to **Users** and click to expand.

9. Check the following scope:

- url:GET|/api/v1/users/:user_id/profile - required for Kaltura to retrieve the user profile. If this scope isn't enabled, users may be prompted to reauthorize when switching between multiple Canvas environments or Kaltura tools in the same Canvas account.

10. Click **Save**.

11. Click the toggle to enable the key.

A confirmation message displays: *Are you sure you want to change the state of the developer key [name]?*

12. Click **Switch to On**. When the key is enabled, it's green.

Step 11 - Set API developer key in Canvas module

The `lti13ClientID` value in the Hosted module tells KAF which Canvas LTI developer key to connect to.

Only complete this step if you used [Option 2 - Scoped API Developer Key](#) above.

1. Log into your Configuration Management console (https://{your_KAF_base_URL}/admin).
2. Navigate to the [Canvas module](#) (https://{your_KAF_base_URL}/admin/config/tab/canvas).
3. In the **useScopedKey** field, set to 'Yes'.

This exposes the **Canvas Account API Developer Key** settings.

useScopedKey	<input type="text" value="Yes"/>	Please make sure that your Canvas key covers the following scopes: url:GET/api/v1/courses url:GET/api/v1/courses/id url:GET/api/v1/users/user_id/profile
enableUserProfileScope	<input type="text" value="Yes"/>	This is a temporary field, and should be set to "1" when using a scoped key. In case your Canvas scope key does not have the "url:GET/api/v1/users/user_id/profile" scope, set this field to "0" as a temporary solution until your Canvas admin adds the scope.
customAppId	<input type="text"/>	
customAppKey	<input type="text"/>	
useCustomContextValues	<input type="text" value="No"/>	The contents of this section affect only the My Media publishing capability. When enabled, you can customize the following context values: 1. context ID which affects the Kaltura category 2. context label which affects the display of the Kaltura category name

4. Set the **enableUserProfileScope** setting to 'Yes'.
5. Fill in the **customAppId** and **customAppKey** fields using the Key ID and Key for the API Developer Key you created in [Option 2](#) above, as follows:
 - a. Navigate to the [Developer Keys page](#) and locate the Canvas API developer key you created.

Developer Keys

Account Inherited

All

Name	Owner Email	Details	Stats	Type	State	Actions
Kaltura Video Plugin	No Email	<p>Client ID 22650000000000390</p> <p><input type="button" value="Show Key"/></p>	<p>Access Token Count: 0</p> <p>Created: Oct 14 at 6:47pm</p> <p>Last Used: Never</p>		<input checked="" type="checkbox"/>	<input type="button" value="Edit"/> <input type="button" value="Delete"/>

Account Settings

Account Name:

Default Language:

This will override any browser/OS language settings. Preferred languages can still be set at the course/user level.

Default Due Time:

This influences the user interface for setting due dates. It does not change the time due for any existing assignments.

Default Time Zone:

Maintenance windows: 1st and 3rd Thursday of the month from 3:05am to 5:05am (Thursday from 8:05am to 10:05am UTC)
Next window: Thu Nov 7, 2024 from 3:05am to 5:05am
For maintenance window details please see the [release notes](#).

Allow Self-Enrollment:

Trusted HTTP Referers:

This is a comma separated list of URLs to trust. Trusting any URL's in this list will bypass the CSRF token when logging in to Canvas.

Default View for Dashboard:

Overwrite all users' existing default dashboard preferences

5. Click the **Apps** tab.

External Apps Manage App List View App Configurations

Apps are an easy way to add new features to Canvas. They can be added to individual courses, or to all courses in an account. Once configured, you can link to them through course modules and create assignments for assessment tools.

acclaim

On the 'External Apps' page, you'll see a list of the Kaltura External apps that have been implemented.

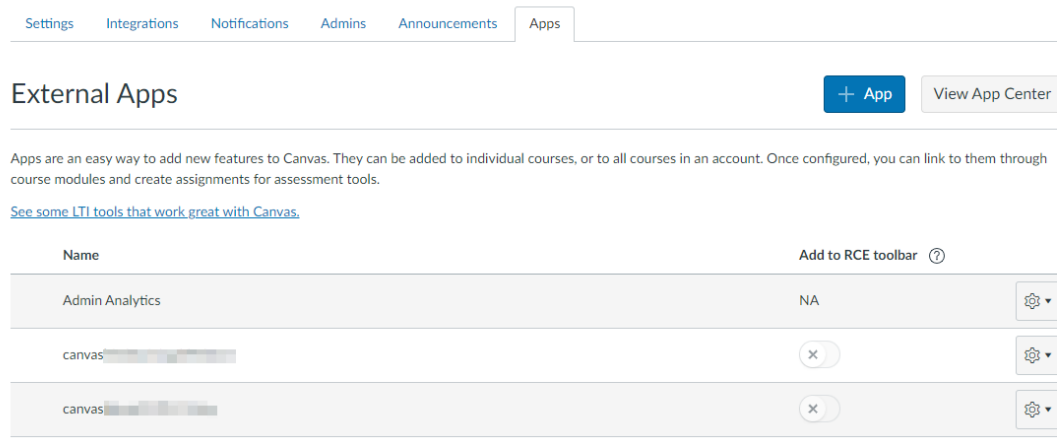

Your list may look different based on the external learning tools implemented at your institution and the name used when the tool was implemented.

6. On the External Apps page, click **View App Configurations**.

The list of apps displays.

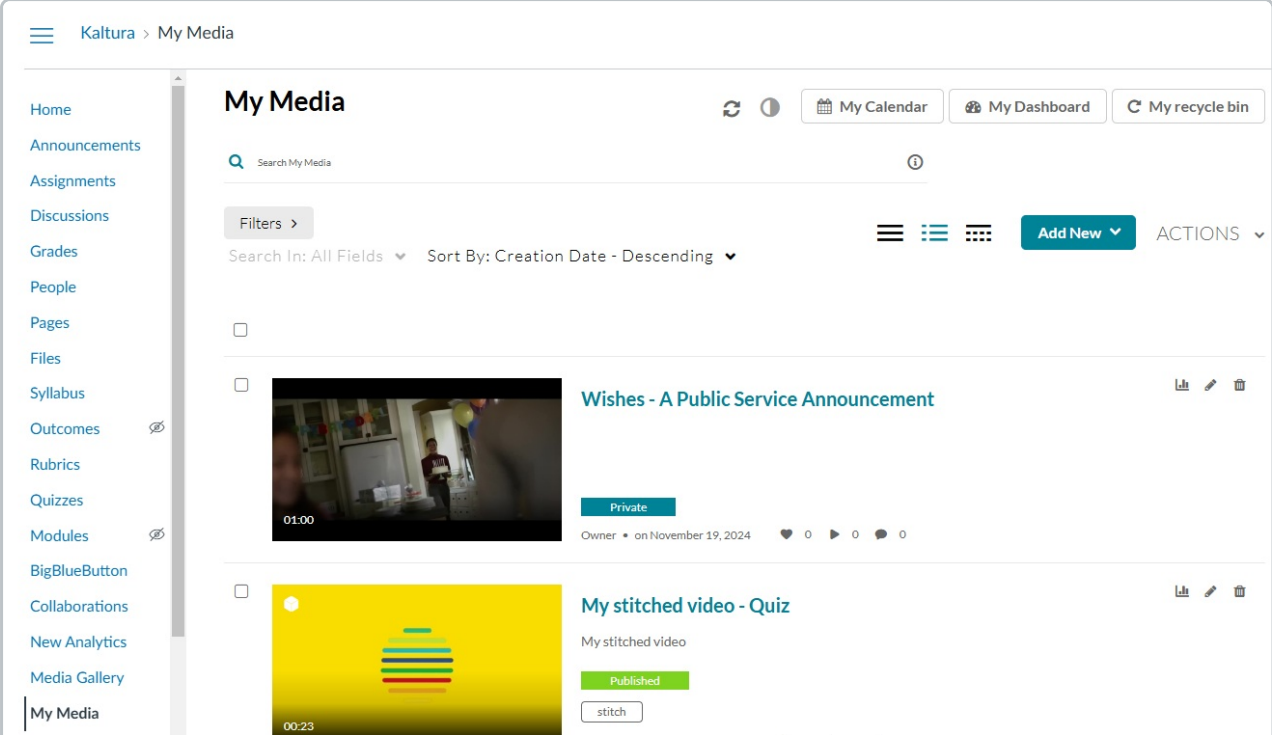

7. Find the Kaltura LTI 1.1 apps, click the gear icon next to each app, and select Delete.
8. Confirm the deletion in the pop-up message. The app and its placement will be removed.

Canvas LTI tool placements

Instructure provides multiple placements for external tools in Canvas. The recommended Kaltura placements align with those used in earlier LTI versions.

Note that placement limitations may apply depending on where the Kaltura tools are added within the Canvas account structure (account, sub-account, course). See [Step 12 - Add Kaltura tools](#).
