Create a custom page in Content Hubs

Content updated: 05/24/2022

This article is designated for administrators.

About

A **custom page** is a page you design and add to your Content Hubs site, such as a homepage, landing page, campaign page, or event page.

Creating a custom page has two parts. You design the page in the Templatepages module, and then you publish it by giving it a URL and permissions in the Custompages module. This article walks you through both.

This feature requires the following to be enabled:

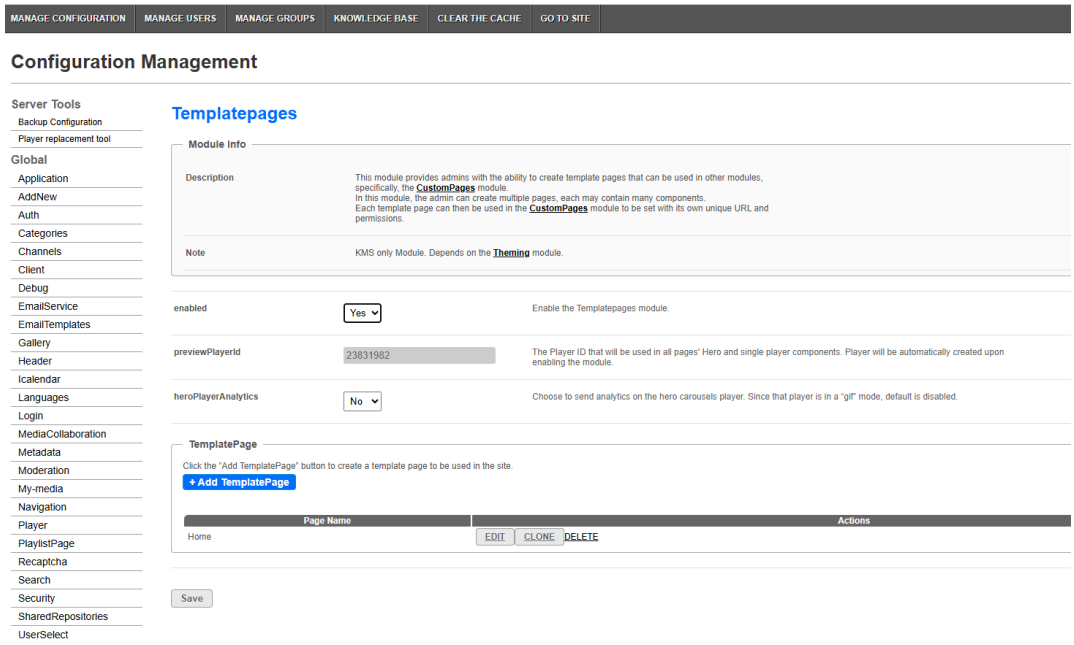

- Theming module
- Templatepages module
- Custompages module

Step 1: Create the page

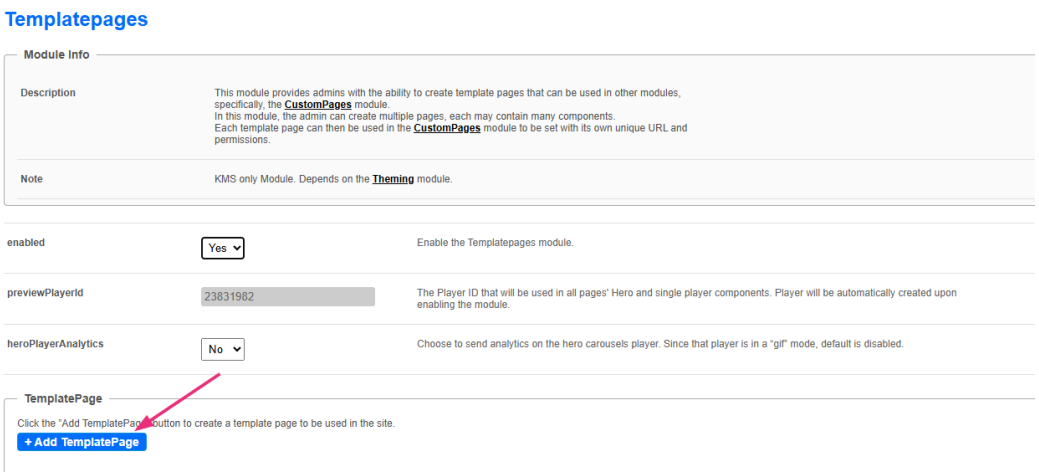

1. Go to your Configuration Management console, locate the **Templatepages** module in the left panel, then select it. You can also navigate directly using a link:
   `https://{your_site_url}/admin/config/tab/templatepages`

   The **Templatepages** page opens.

1. Select **+Add TemplatePage**.

The settings for your new page open.

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

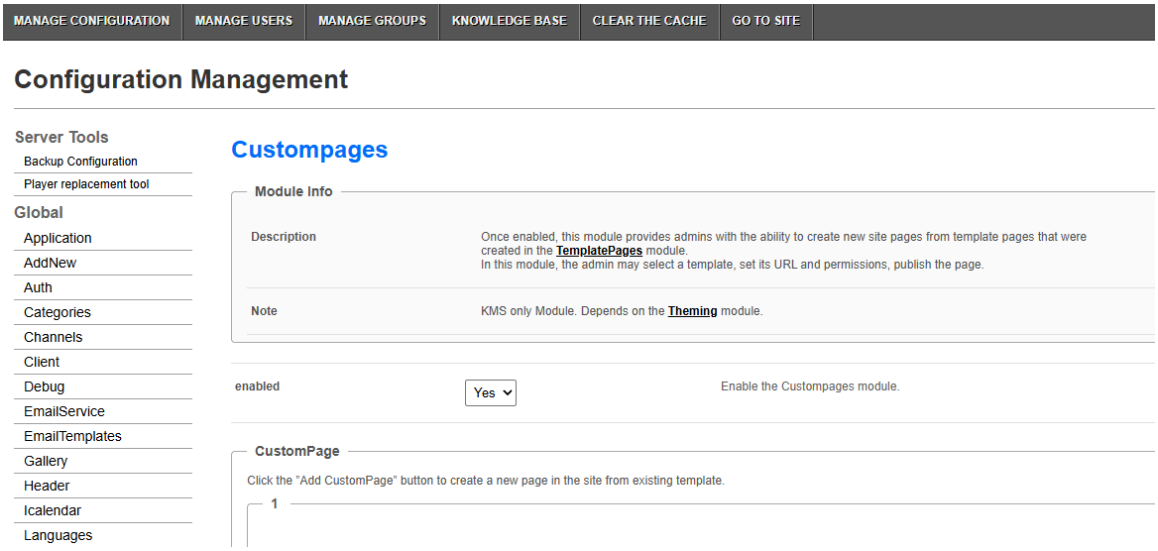

2. Configure the following:
   - **pageName** - Enter a name for the page. Other modules show this name when you select the page.
   - **pageTitle** - Enter the title shown in the browser tab.
   - **pageHeader** - Optional. Enter a header to show at the top of the page.
   - **navbarType** (in the **navbarSettings** section) - Select **Site navigation** to use your site's standard navigation, or **Clean navbar** for a simplified bar with a call-to-action button and a custom logo.
   - **HeroType** (in the **heroUnit** section) - Select a hero unit type, or keep **Do not use hero** if you don't want one.
3. Select **Save**.

For more information, see Templatepages module.

Step 2: Publish the page

1. Go to the Custompages module. You can also navigate directly using a link `https://{your_site_url}/admin/config/tab/custompages`

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

2. Select **+Add CustomPage**.

   Additional fields appear.

3. Configure the following fields. They connect your page to its own URL, and control who can see the page:
   - **published** - Leave this set to **No** while you work on the page. When the page is ready for users, set it to **Yes**.
   - **pageTemplate** - Select the page you created in Step 1.
   - **pageSlug** - Enter a unique URL slug for the page. The page URL uses the format `https://{your_site_url}/{slug}`. For example, the slug `events` creates `https://{your_site_url}/events`.
   - **permission** - Select the minimum user role that can open the page.
4. Select **Save**.

   Your page is now available at its own URL.

For more information, see Custompages module.

Make the page available from your site

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

You can share your page's URL directly, for example by email, without adding it to your site. To make the page easy to find on your site, add its URL in one of these modules:

- Navigation module: to add the page to the navigation bar
- HeaderMenu module: to add the page to the header or the user menu
- Footer module: to add the page to the footer
- HelpPage module: to add the page to the help page
- ListPage module: to add the page to any of the playlist pages

You can also link to the page from media or channel descriptions, or from other pages you built.

Use a custom page as your homepage

Your homepage is the first **pre** element in the **Navigation** module. To make a custom page your homepage, set that element to open your page. You can do this in two ways:

- **Option 1: Use a URL** - The element links to your custom page's URL.
- **Option 2: Use a custom page** - You select your custom page from a list.

For both options, create your custom page first, as described in Step 1 and Step 2.

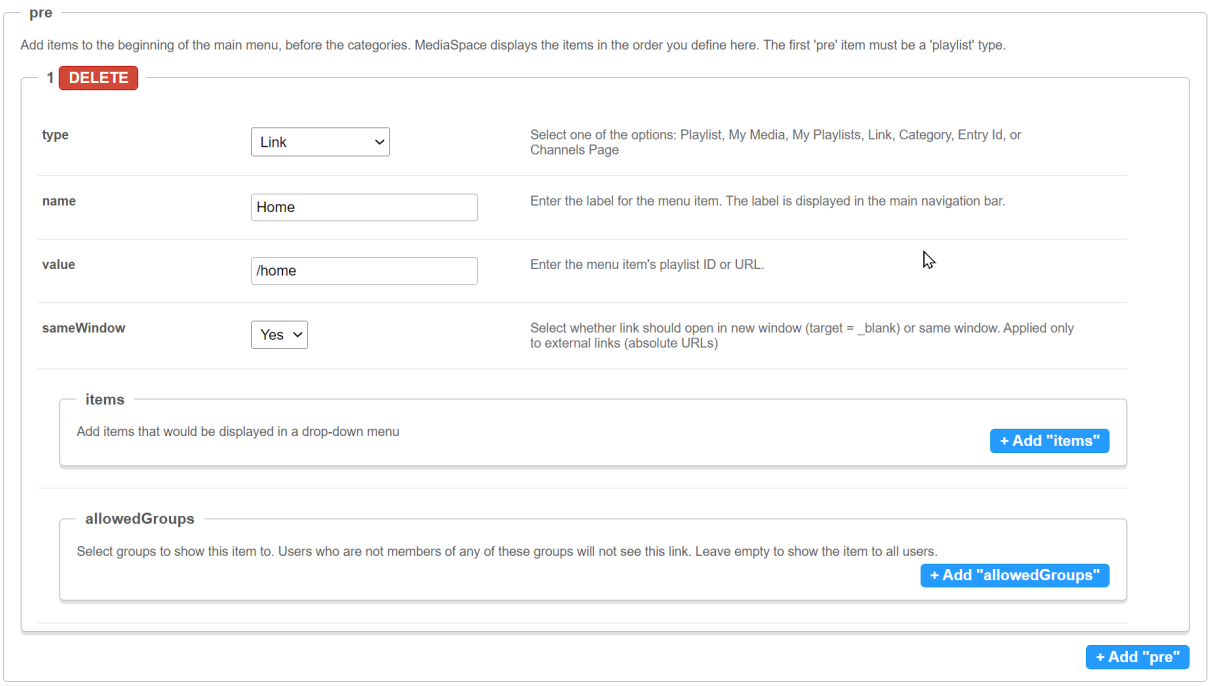

To use custom pages as your homepage, turn off the Home module.

Option 1: Use a URL

When you create the custom page, give it a URL such as `https://{your_site_url}/home`. Then, in the Navigation module, set the first **pre** element as follows:

- **Type** - Select **Link**.
- **Name** - Enter `Home`.
- **value** - Enter `/home`.
- **sameWindow** - Select **Yes**.

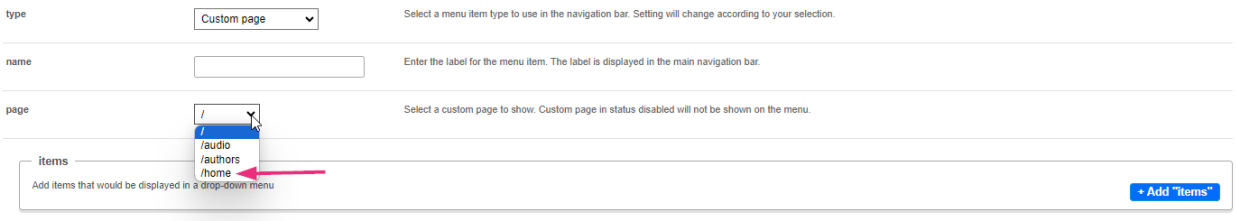

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

Option 2: Use a custom page

In the Navigation module, set the first **pre** element as follows:

- **Type** - Select **Custom page**.
- **Name** - Enter `Home`.
- **page** - Select your custom page.

Set up multiple homepages

You can give each user group its own homepage. Each user's homepage is the first **pre** element they're allowed to see. So, to set up a homepage per group, add a **pre** element for each group's page, and limit each element to its group.

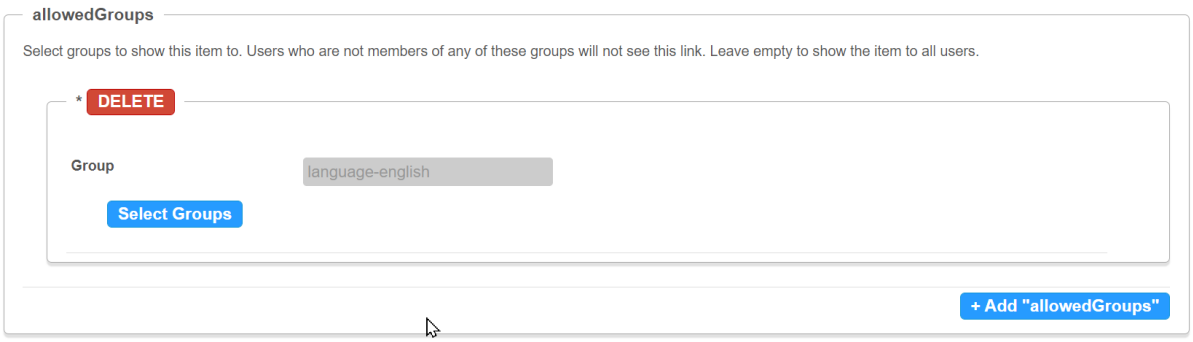

First, create and publish a custom page for each homepage, as described in Step 1 and Step 2. Give each custom page its own URL, such as `https://{your_site_url}/home_en` and `https://{your_site_url}/home_fr`.

To use custom pages as your homepage, turn off the Home module.

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

Then, in the Navigation module:

1. Set the first **pre** element as follows:
   - **Type** - Select **Link**.
   - **Name** - Enter `Home`.
   - **value** - Enter `/home_en`.
   - **sameWindow** - Select **Yes**.
2. In the **allowedGroups** section, select the group that should see this homepage. Users who aren't in that group don't have this homepage in their navigation bar.

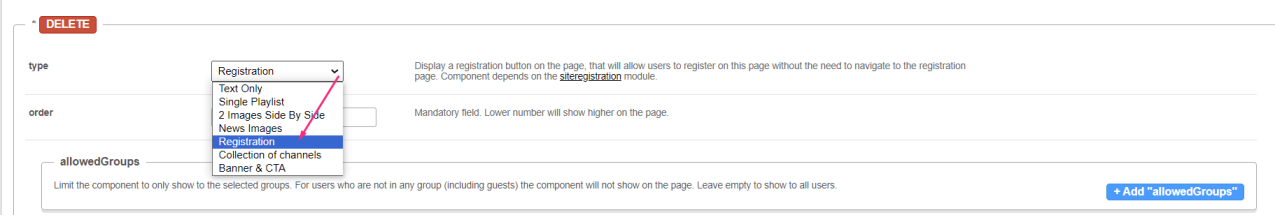

3. Create the next **pre** element. It must be second in the list. Set it as follows:
   - **Type** - Select **Link**.
   - **Name** - Enter `Home`.
   - **value** - Enter `/home_fr`.
   - **sameWindow** - Select **Yes**.
4. In the **allowedGroups** section, select the second group.

Repeat these steps for more groups. Users who aren't in any of these groups get the next available **pre** element as their homepage. This can be a general page, such as **My Media** or **All Channels**.

Add a registration component

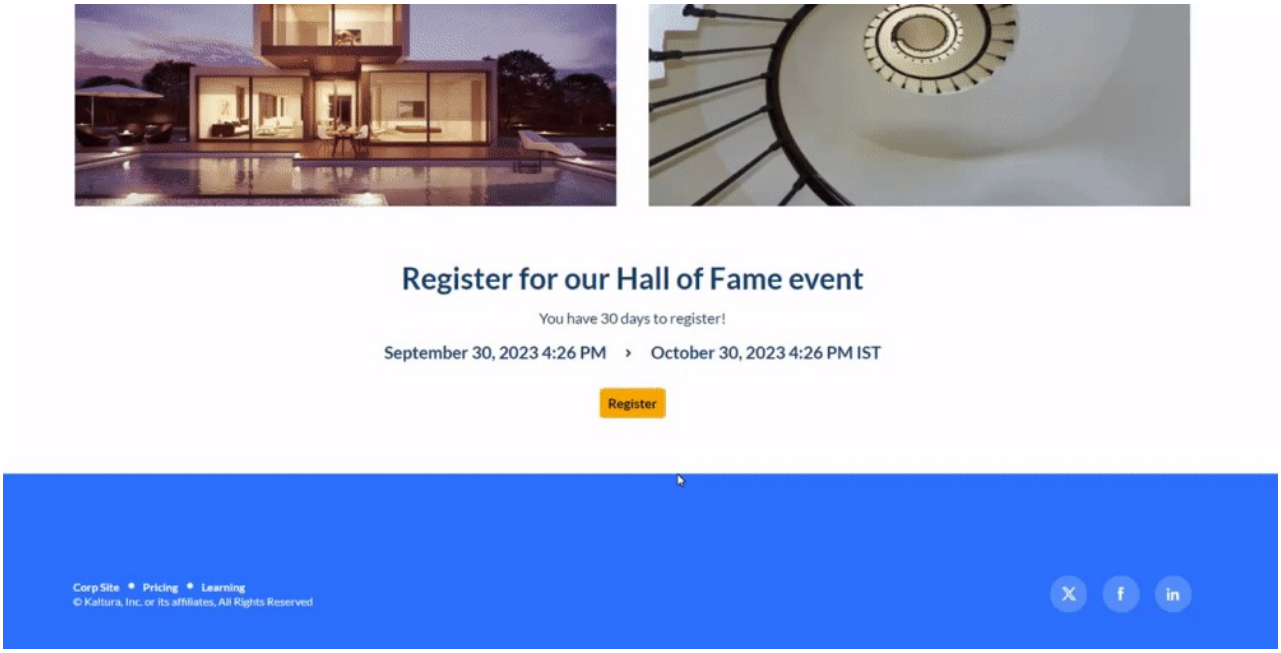

You can add the Registration component to a custom page or homepage, so users can register without leaving the page.
