About

Kaltura Player is an open-source media player that supports video-on-demand and live streaming across web and mobile environments.

The player can be customized to match your organization's branding and user experience requirements, and its source code is available for **developers** who want to build and host their own deployments.

Key capabilities include:

- Cross-platform playback for web, iOS, and Android
- Adaptive bitrate streaming
- Live streaming support
- Player plugins and extensions
- Customization using CSS and HTML

Open-source availability

The Kaltura Player source code is available in the [Kaltura GitHub repository](#).

- Developers can:
- Download the player source code
- Build the player library using the provided build instructions
- Customize player functionality and appearance
- Host the player library in their own environment

To use the player independently, you must build the player library and host the resulting files on a publicly accessible web server or CDN.
