

Related content on player

Last Modified on 01/18/2026 4:05 pm IST

 This article is designated for all users.

About

Related content on the player lets you display suggested videos directly within the video player, helping viewers discover and continue watching relevant content.

Related items can appear when playback is paused or ends, or when viewers click the icon (four squares) at the top right of the player. This creates a smooth viewing flow and encourages continued engagement without leaving the player.

Setup

To learn how to set the **Related** plugin on the player, see [Enable related content on the player](#).

Features

- Related videos can be displayed when:
 - playback is paused
 - when clicking on the Related icon
 - at the end of the video
- Related videos can be selected manually by users or set to auto-continue by

default.

- Related videos can be grouped by tags, Playlist ID, or by a specified Entries list.
