 This article is designated for all users.

About

The Kaltura Player supports 360° video and VR on desktop and mobile devices with any motion - mouse, touch, device motion, and keyboard keys.

Immersive videos, also known as 360 videos, 360-degree videos, or spherical videos, are video recordings of a real-world panorama, where the view in every direction is recorded at the same time, shot using an omnidirectional camera or a collection of cameras. Kaltura supports navigation using the mouse, keyboard (using WASD keys), and on mobile devices.

Use cases for 360 / VR are varied and include university lectures, conferences, sports events, and more.

360° videos are only available for viewing in a web browser. The player supports a VR source, but not an immersive, 3D experience as with a VR headset.

Setup

To learn how to set the **360 & VR Plugin** on the player, see [Enable 360° and VR playback in the player.](#)

Supported browsers

- Google Chrome
- Microsoft Edge
- Firefox
- Internet Explorer 11
- Safari
- Mobile Chrome
