## About

With our enhanced Theme Builder, you have the power to craft a unique and personalized theme for your video portal effortlessly. By simply selecting a single primary color, you can seamlessly transform your entire site with perfectly coordinated complementary shades. The process of refining your site's appearance to align with your vision is now remarkably simple, granting you the ability to achieve your desired aesthetic effortlessly.

 Changes made in the Theme Builder will apply to all pages across your site that are part of the **Theming** design system!

Check out our improved Theme Builder below:

The screenshot shows the 'Edit theme' interface. On the left, there are five callout boxes with pink backgrounds and white text, each pointing to a specific control in the theme editor:

- Brand color – use for CTA buttons, links and highlighted elements.** Points to the 'Brand color' field with the hex code #006EFA.
- Mode – choose a light or dark theme, or go custom!** Points to the 'Mode' section with 'Dark' selected.
- Three color variations add a unique touch to your theme.** Points to the 'Variations' section showing 'Neutral' and 'Monochromatic' options.
- Choose from a selection of fonts or upload your own custom fonts.** Points to the 'Font Family' section with 'Lato' selected.
- Control the shape of elements such as buttons and menus.** Points to the 'Roundness' section with 'Slightly Rounded' selected.

The main preview area shows a dark-themed interface with the Kaltura logo, a 'Live stage' button, and a chat window. The headline reads 'Put your brand in the forefront'. Below the headline, there are three buttons: 'Call to action' (blue), 'Secondary button' (grey), and 'Select button' (grey with a dropdown arrow). The chat window shows messages from Celine Garnier, Julian Lang, Julia Brice, and James Li.

## Access the Theme Builder

1. To access the Theme Builder, go to your KMS or KAF admin page, and navigate to the **Theming** module. Your link should look like this: [https://{your\\_KMS\\_URL}/admin/config/tab/theming](https://{your_KMS_URL}/admin/config/tab/theming).

- Staticpages
- Styling
- Templatepages
- Theming** ←
- Thumbnails
- Twitter
- Uploadmedia
- Userreports

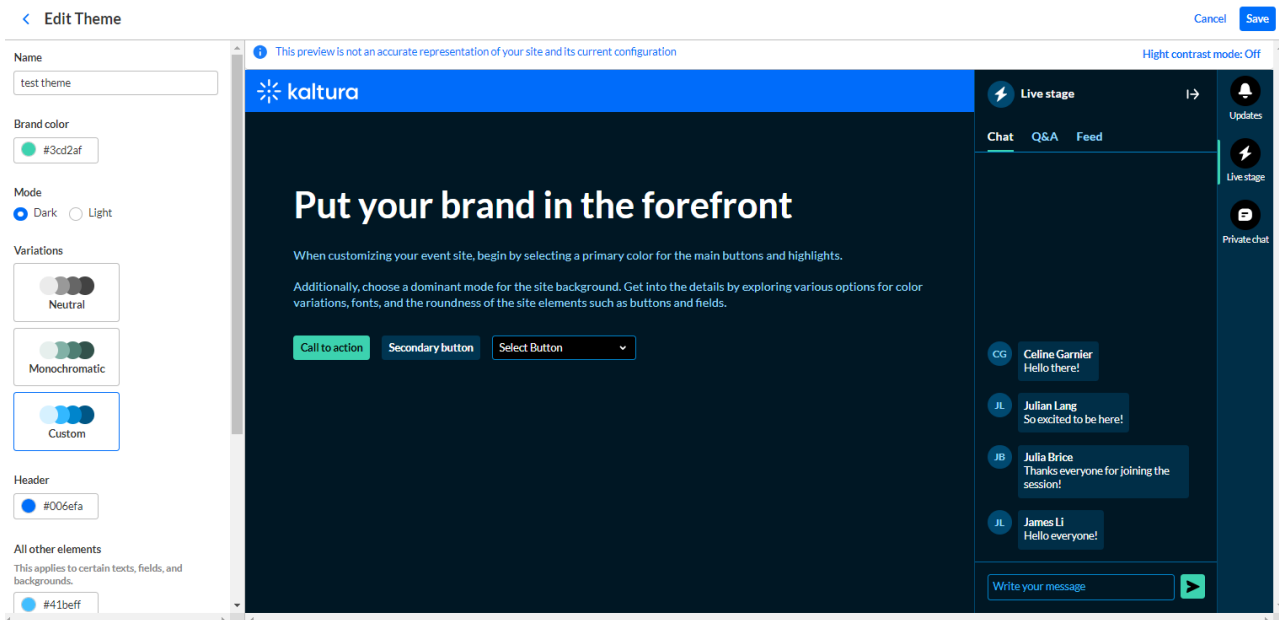

2. In the Themes section, click **Add Themes**.

3. Click **Edit**.

The Theme Builder displays.

## Create a theme

**⚠** Please note that if you're editing an older version of the theme using this editor, any changes you make will replace previous modifications and cannot be reversed.

## Brand color

The brand color is used as an accent color, reflected in interactive elements such as call-to-action buttons, links, and highlighted elements.

---

### Brand color

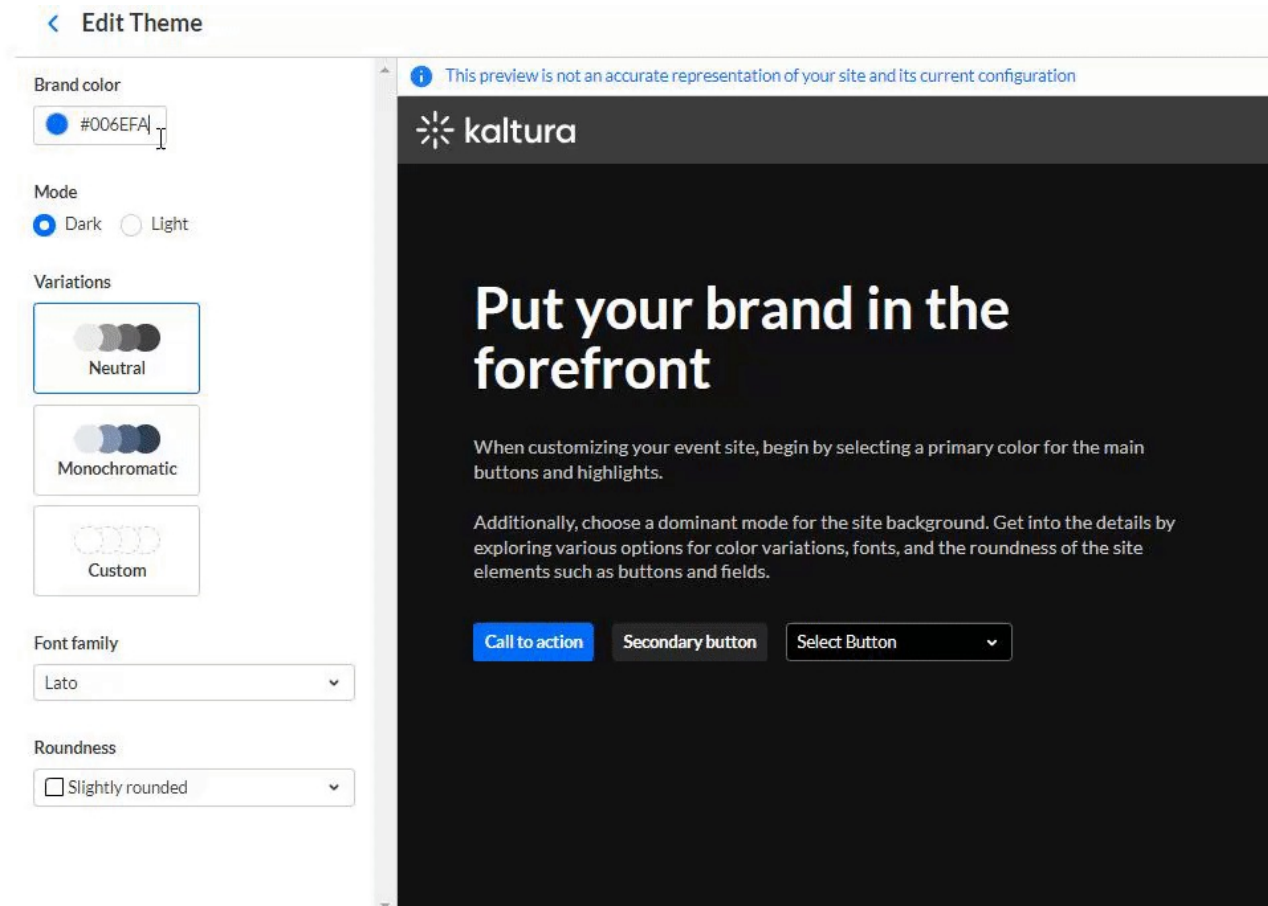

You can change the color by clicking on it and opening the color palette, or by typing in a Hex code.

When you change the color, you can see how it looks in real-time in the Preview window.

 **Note:** The preview is simply a guide and not an accurate representation of your whole site and its current configuration.

## Mode

Select the theme color mode from one of the following options:

- Dark Mode
- Light Mode

The mode also allows you to create your own custom theme.

## Variations

The color scheme offers several options to add a unique touch to your theme. It controls the colors of your backgrounds, text, and other UI elements. You can select from three options:

- **Neutral** - The scheme will be composed with shades of neutral tones.
- **Monochromatic** - The scheme will use hues from your brand color to create a low-saturated color palette.
- **Custom** - This gives you more options, for example, you can set a color for your header and choose a specific color to create the color palette for the rest of the UI elements.

Mode  
 Dark  Light

Variations

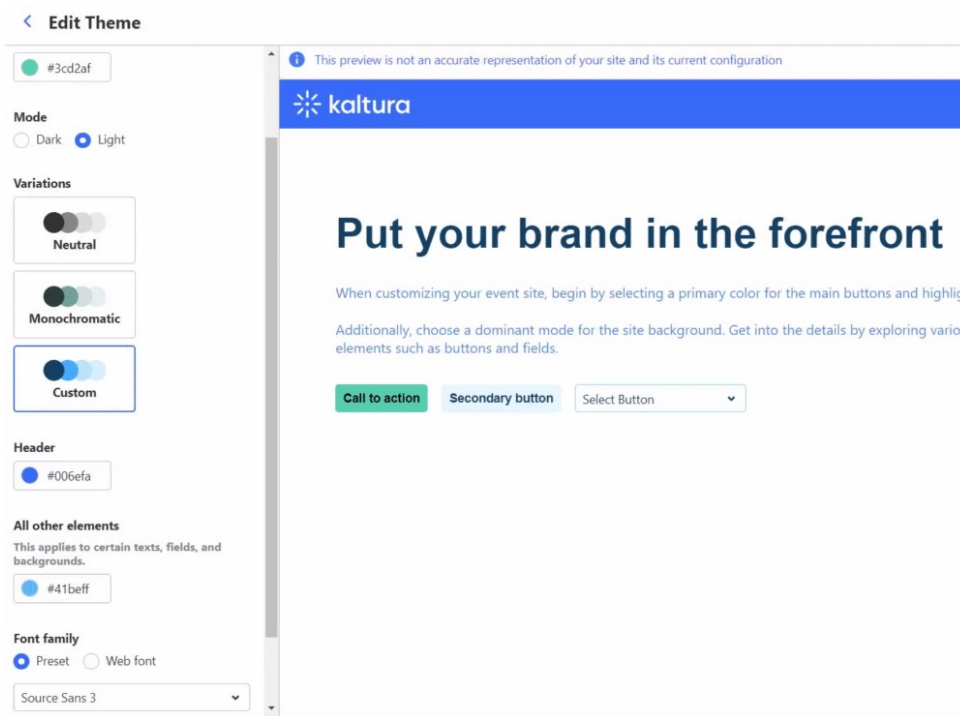

## Custom

Note that there are two different colors you can use. You can choose a color for the header and a secondary color that will affect the hue of your site.

The screenshot shows the 'Edit Theme' interface. On the left is a configuration sidebar with sections for 'Mode' (Dark/Light), 'Variations' (Neutral, Monochromatic, Custom), 'Header' (color #006efa), 'All other elements' (color #41beff), and 'Font family' (Preset/Web font, Source Sans 3). The main preview area shows a blue header with the Kaltura logo and the text 'Put your brand in the forefront'. Below the header are two buttons: a green 'Call to action' button and a white 'Secondary button' with a dropdown arrow. A 'Select Button' dropdown menu is open below the secondary button. On the right, a 'Live stage' chat interface is visible with messages from Celine Garnier, Julian Lang, Julia Brice, and James Li.

The 'Select Button' demonstrates the chosen Theming for drop-down menus.

## Font family

Choose **Presets** or **Web font**:

**Presets** - Select a font family from one of the following 26 options:

<ul style="list-style-type: none"> <li>• Arial</li> <li>• Garamond</li> <li>• Georgia</li> <li>• Lato (Default)</li> <li>• Sans-serif</li> <li>• Tahoma</li> <li>• Times New Roman</li> <li>• Trebuchet MS</li> <li>• Verdana</li> </ul>	<ul style="list-style-type: none"> <li>• Cardo</li> <li>• DM Sans</li> <li>• Fira</li> <li>• Inter</li> <li>• Libre Baskerville</li> <li>• Libre Franklin</li> <li>• Merriweather</li> <li>• Nunito Sans</li> <li>• Open Sans</li> </ul>	<ul style="list-style-type: none"> <li>• Roboto</li> <li>• Roboto Condensed</li> <li>• Roboto Slab</li> <li>• Rubik</li> <li>• Source Sans 3</li> <li>• Space Grotesk</li> <li>• Work Sans</li> <li>• Zilla Slab</li> </ul>

Lato

Roundness

Slightly rounded

**Web font** - When you click Web font, additional functions display:

Font family

Preset  Web font

External stylesheet URL  

https://...

Font family name 

Example: 'Tangerine'

**External stylesheet URL** - Enter a stylesheet URL that contains your embedded fonts, for example:

<https://fonts.googleapis.com/css2?family=Roboto:wght@400;700&display=swap>

 Only a single font family should be embedded. We recommend to include the following weights: 400 (normal) and 700 (bold).

**Font family name** - Enter the font family name (for example, 'Tangerine') as specified in the stylesheet, or as supplied by your provider.

## Roundness

Select the roundness of UI elements such as buttons, input fields, and certain menus. Choose from the following options:

- Sharp Edges
- Slightly Rounded (Default)
- Rounded
