

Addcontent module

Last Modified on 05/11/2026 2:21 pm IDT

 This article is designated for administrators.

About

Once enabled, this module allows you to add content directly to channels and galleries from their respective pages. Disabling the module won't prevent content from being published to the category via the Media Page or My Media.

Configure

1. Go to your Configuration Management console and click on the **Addcontent** module. You can also navigate to it directly using a link:
`https://{your_KMS_URL}/admin/config/tab/addcontent.`

The 'Addcontent' page displays.

Configuration Management

The screenshot shows the 'Addcontent' configuration page. On the left is a sidebar with a 'Global' section containing links for Application, AddNew, Auth, Categories, Channels, Client, Debug, EmailService, and EmailTemplates. The main content area is titled 'Addcontent' and includes a 'Module Info' section with a description: 'Once enabled, this module provides the ability to add content to the channels and galleries directly from the channel/gallery page itself. Disabling this module will not prevent publishing content to the category from the Media Page or My-Media.' Below this is a configuration row with the label 'enabled', a dropdown menu set to 'Yes', and the description 'Enable the ability to add content to channels/galleries directly from the channel/category page.' At the bottom left of the configuration area is a 'Save' button.

2. Set **enabled** to 'Yes' to enable the module.
3. Click **Save**.

User experience

When enabled, the **+Add to Channel** button is displayed on the channel page.
