

# How to update your default Embed player

Last Modified on 02/05/2024 8:18 am IST

The newly created V7 Player is selected for the playback of media via the Share and Embed option in your Kaltura MediaSpace and KAF applications. For additional information, see the [Embed module](#).

## Step 1 - Create a player

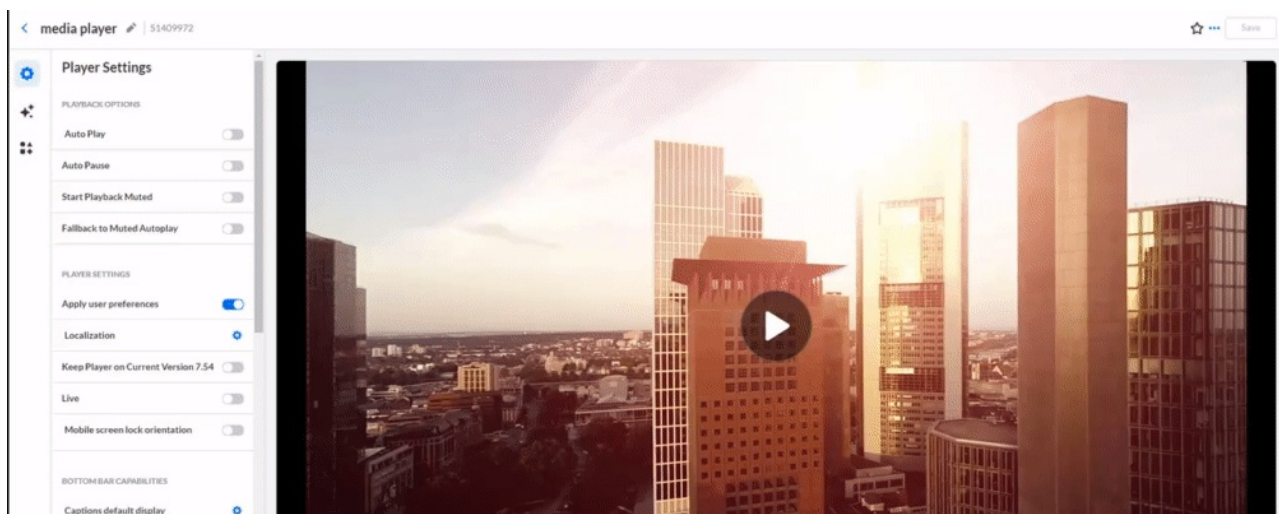

Go to your KMC and create a player via the **Kaltura Player Studio**. See [The Kaltura Player Getting Started Guide](#) for more information.

Name	ID	Last Modified	Creation Date	Plays (Last 30 days)	Domains (Last 30 days)
MediaSpace Default Webcast Homepage Preview Player (Do Not Delete)	51398672	21/11/2022	21/11/2022	0	0
MediaSpace Default Registration Player (Do Not Delete)	51398572	21/11/2022	21/11/2022	0	0
MediaSpace Default Path Player (Do Not Delete)	51398562	21/11/2022	21/11/2022	0	0
MediaSpace Default TemplatePages Player (Do Not Delete)	51398272	21/11/2022	21/11/2022	0	0
MediaSpace Default Recorder Widget Player (Do Not Delete)	51010512	16/11/2022	21/09/2022	45	2
New Player css	50970682	14/09/2022	14/09/2022	0	0
Knowledge Center Player - DO NOT DELETE	50952692	12/09/2022	12/09/2022	3	2

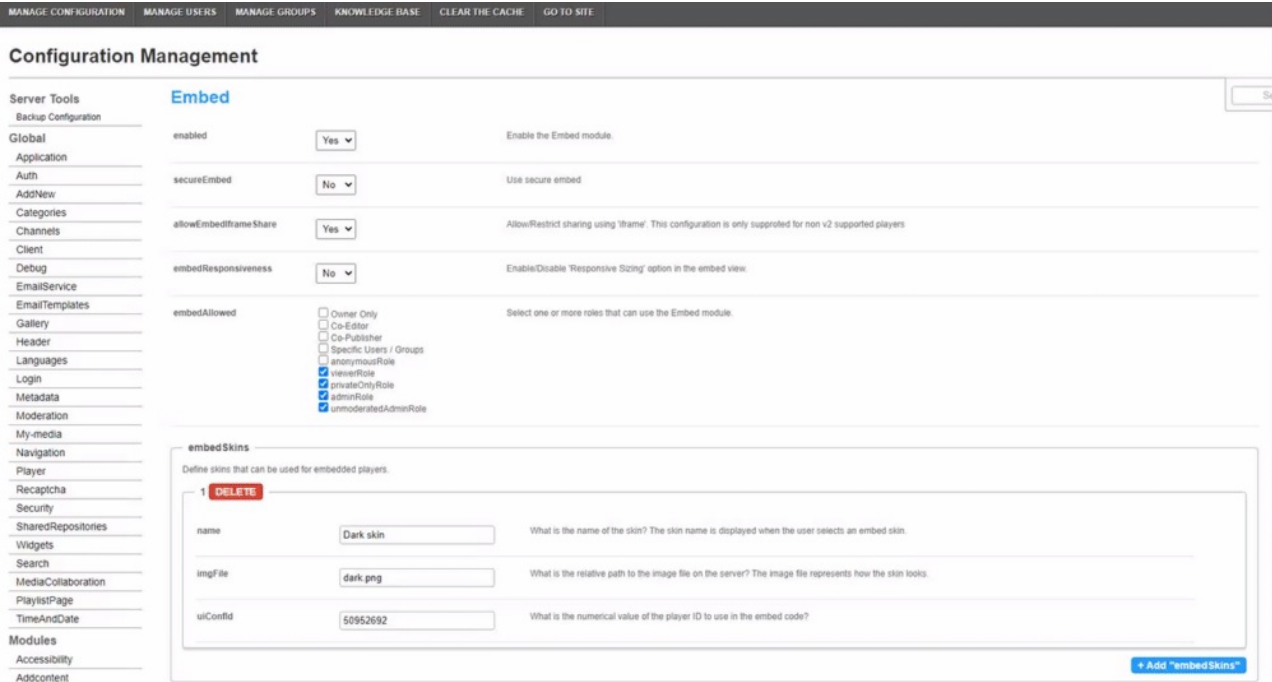

## Step 2 - Configure your player

Configure the player with the desired capabilities and style using the **Kaltura Player Studio**. To learn more, see [Player Plugins](#) & [The Kaltura Player Admin Guides](#). After your player is configured, copy the player ID.

## Step 3 - Apply the new player on your KMS/KAF application

1. Go to your KMS/KAF admin page and navigate to the [Embed](#) module.
2. Under **embedSkins**, set the uiConfId of the new player.
3. Save.

The screenshot shows the 'Configuration Management' interface for the 'Embed' module. On the left is a navigation menu with categories like 'Server Tools', 'Global', 'Categories', 'Client', 'Debug', 'EmailService', 'EmailTemplates', 'Gallery', 'Header', 'Languages', 'Login', 'Metadata', 'Moderation', 'My-media', 'Navigation', 'Player', 'Recaptcha', 'Security', 'SharedRepositories', 'Widgets', 'Search', 'MediaCollaboration', 'PlaylistPage', 'TimeAndDate', 'Modules', 'Accessibility', and 'AddContent'. The main content area is titled 'Embed' and contains several configuration rows:

- enabled**: Set to 'Yes'. Description: Enable the Embed module.
- secureEmbed**: Set to 'No'. Description: Use secure embed.
- allowEmbedFrameShare**: Set to 'Yes'. Description: Allow/Restrict sharing using 'iframe'. This configuration is only supported for non v2 supported players.
- embedResponsiveness**: Set to 'No'. Description: Enable/Disable 'Responsive Sizing' option in the embed view.
- embedAllowed**: A list of roles with checkboxes. Selected roles include: viewerRole, privateOnlyRole, adminRole, and unmoderatedAdminRole. Description: Select one or more roles that can use the Embed module.

Below these settings is the 'embedSkins' section, which allows defining skins for embedded players. It includes a 'DELETE' button and a table with the following fields:

Field	Value	Description
name	Dark skin	What is the name of the skin? The skin name is displayed when the user selects an embed skin.
imgFile	dark.png	What is the relative path to the image file on the server? The image file represents how the skin looks.
uiConfId	50952692	What is the numerical value of the player ID to use in the embed code?

A '+ Add "embedSkins"' button is located at the bottom right of the embedSkins section.
