

## How to update the Entry Design default player

The newly created V7 Player is used for the playback of media designed for specific media pages in your Kaltura MediaSpace and KAF applications. For additional information, see the [Entrydesign](#) module.

By default, the [Entrydesign](#) module uses the site's default player. If a different player is specified, follow the steps below.

### Step 1 - Create a new player

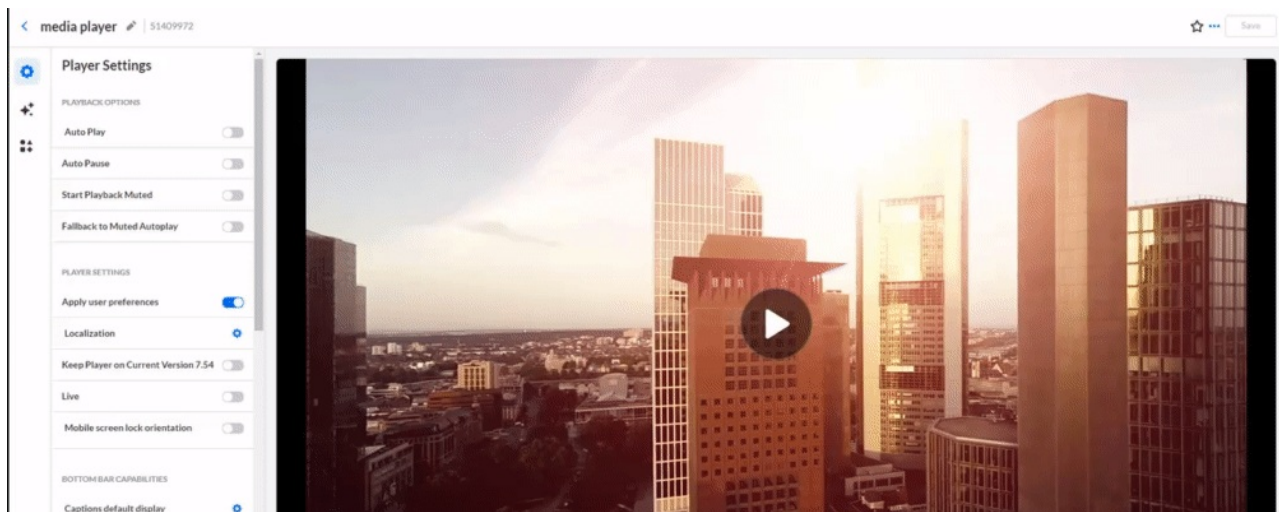

Go to your KMC and create a player via the **Kaltura Player Studio**. See [The Kaltura Player Getting Started Guide](#) for more information.

| Name   | ID       | Last Modified | Creation Date | Plays (Last 30 days) | Domains (Last 30 days) |
|--|----------|---------------|---------------|----------------------|------------------------|
| MediaSpace Default Webcast Homepage Preview Player (Do Not Delete) | 51398672 | 21/11/2022    | 21/11/2022    | 0                    | 0                      |
| MediaSpace Default Registration Player (Do Not Delete)             | 51398572 | 21/11/2022    | 21/11/2022    | 0                    | 0                      |
| MediaSpace Default Path Player (Do Not Delete)                     | 51398562 | 21/11/2022    | 21/11/2022    | 0                    | 0                      |
| MediaSpace Default TemplatePages Player (Do Not Delete)            | 51398272 | 21/11/2022    | 21/11/2022    | 0                    | 0                      |
| MediaSpace Default Recorder Widget Player (Do Not Delete)          | 51010512 | 16/11/2022    | 21/09/2022    | 45                   | 2                      |
| New Player css   | 50970682 | 14/09/2022    | 14/09/2022    | 0                    | 0                      |
| Knowledge Center Player - DO NOT DELETE                            | 50952692 | 12/09/2022    | 12/09/2022    | 3                    | 2                      |

### Step 2 - Configure your player

Configure the player with the desired capabilities and style using the **Kaltura Player Studio**. To learn more, see [Player Plugins & The Kaltura Player Admin Guides](#). After your player is configured, copy the player ID.

### Step 3 - Apply the new player on your KMS/KAF application

1. Go to your KMS/KAF admin page and navigate to the [Entrydesign](#) module.
2. Under **players**, set **playerId** with the uiConfId of the new player.
3. **Save.**

### Entrydesign

**Module Info**

|                    |   |
|--------------------|---|
| <b>name</b>        | Entry Design  |
| <b>description</b> | Enable the entryDesign Module to allow media owners and co-editors to specify the look and feel of the entry view page. |

**enabled**  Yes Enable the Entrydesign module.

**entryDesignRole**  Roles that are allowed to theme entries

**players**

Fill in the player ID and player display name you wish to allow the users to use in the entry page. If no Player ID is filled, the site's default player will be used.

DELETE

|                          |                                       |                                    |
|--------------------------|---------------------------------------|------------------------------------|
| <b>playerDisplayName</b> | <input type="text" value="video"/>    | <small>Player Display Name</small> |
| <b>playerId</b>          | <input type="text" value="51398652"/> | <small>Player ID</small>           |
| <b>entryType</b>         | <input type="text" value="Video"/>    | <small>Entry Type</small>          |

**showEmbedPlayerOption**  Force Entrydesign Player in Select the EntryDesign players behavior with the Embed and default players. Select 'User Selects' to show a new button for the users called 'Set as Embed Player' next to the player selection. For more info about each value, [visit Kaltura Knowledge Base](#)

**showEmbedElements**  Select which elements can be displayed for the media owners to control. The media owners will be able to choose which of the elements
