

Using Meetings to create dual screen recordings

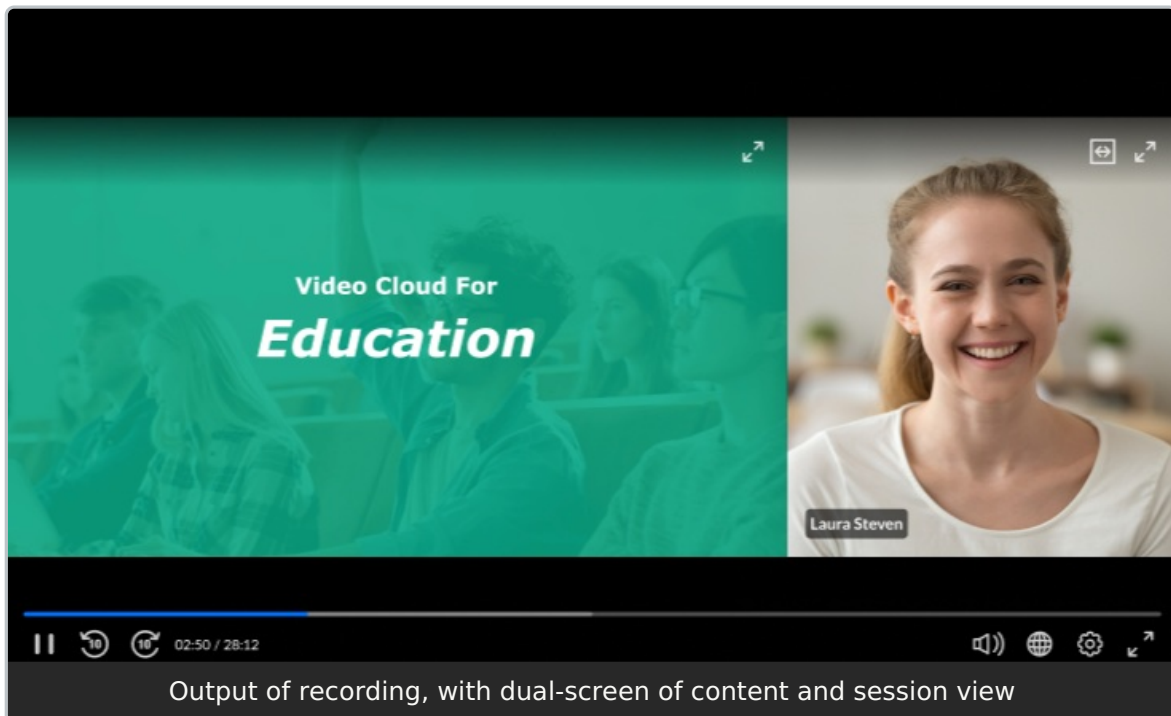

Last Modified on 03/27/2025 8:35 am IST

 This article is designated for all users.

i Legacy notice

This article documents the **legacy KME Room**. For information on the new room, please visit the [new Kaltura Room documentation](#).

With Kaltura Meetings, you can generate dual screen media using the Recordings tool. When you record in a Meetings room, the recording can show two viewing streams simultaneously: one from your camera, and the second from the screen in the room itself. If the room is displaying your shared screen, with materials such as documents or presentations, then the second stream will show that content.

Additionally, each time that the presenter changes slides, cuepoints will be automatically added to the recording. Viewers then can easily navigate to the point in the recording where a specific slide was presented.

The output of this dual stream recording, including the preset slide cuepoints, can be seen with the Kaltura player when both the [Dual Screen](#) and [Navigation](#) features are enabled. Users can search and browse through slide cuepoints on the slides tab, and in

the "All" tab on the player's navigation plugin.

The screenshot displays the Kaltura video player interface. At the top, there is a navigation bar with the Kaltura logo, a search bar, and a language selector (EN). The main video player area shows a speaker, Ron Yekutiel, presenting a slide titled "The Video Cloud". A search bar is overlaid on the right side of the video player, showing the "All" tab selected. Below the video player, the video title "Kaltura Connect Opening Keynote" is displayed, along with a "Take Survey" button. The video description and a "Read More" link are also visible. A "Related Media" section on the right lists other videos, including "Kaltura Connect Opening Keynote", "Looking into the Future", and "How CIOs Think About Video: The Oracle Story". At the bottom of the player, a caption reads: "Output with dual-screen, with chapters, content view, and session view".
