

Search module

Last Modified on 02/10/2025 2:40 pm IST

 This article is designated for administrators.

About

The Search module unlocks your vast video library, offering convenient access through both the header bar and the dedicated global search page. Optimized for video content, it provides accurate and efficient search capabilities.

This module is exclusive to the [Video Portal](#).

Key features

- **Tailored for video:** Understands video-specific metadata for relevant results.
- **Comprehensive search:** Covers regular, custom, and temporal metadata.
- **Complete access:** Search your entire library, including private and niche content.
- **Fine-grained control:** eSearch API empowers advanced query construction.
- **Elasticsearch integration:** Delivers seamless and unified search results across all data fields.

Search options

- **Instant header search:** Quickly find specific videos using keywords on any page.
- **Deep dive with global search:** Explore the entire library, browse categories, and refine your search.

Specially for Theming users!

- **Customized homepage:** Transform the search page into your site's entry portal. Customize the title and description to reflect your site's identity or brand, and create a unique starting point for your users' adventures.

These instructions will help you choose the right tools for your use case.

For Theming users, check out our [Global search](#) user guide.

Using the Search module

1. Go to your Configuration Management console, and navigate to the **Search** module.

You can also navigate directly using a link: `https://{your_KMS_URL}/admin/config/tab/search`.

- PlaylistPage
- Recaptcha
- Search** ←
- Security
- SharedRepositories
- Widgets
- TimeAndDate

The Search page displays.

Search

Module Info

Info

The search module provides and controls the search capabilities on the site, such as the search bar on the header, and the global search page (<https://15932.nvg2.mediaspace.kaltura.com/search>). In addition, when using the theming module, this module provides a copy of the search page in the form of a 'All content' page (<https://15932.nvg2.mediaspace.kaltura.com/all-content>) with additional description text at the top of the page. This is a KMS only module.

allContentText Enter text to display at the top of the 'All content' page. HTML markup is supported.
Note: Only available for **theming** based search page.

View and search all published content of the site.

GalleryResults Choose to display or hide the galleries results on the global search page.
Note: Only available for **theming** based search page.

Hide ▾

2. Configure the following settings depending on whether you have Theming enabled or not.

For non-Theming users

If you don't have the **Theming** feature set enabled, this section is for you.

Configure eSearch options

eSearch

In this section, you can choose searchable data on your site by using the eSearch options (matches in the title and subject of media are always included).

tags - Set to 'Yes' to have media tags returned in the search results.

Owner - Set to 'Yes' to have media owners returned in the search results.

RefId - Set to 'Yes' to have media reference IDs returned in the search results.

captions - Set to 'Yes' to have captions returned in the search results. Please note that this feature can be enabled regardless of the [captions module](#) status.

custommetadata - Navigate to the [Customdata](#) module to have media custom metadata returned in the search results.

kwebcast - Navigate to the [Kwebcast](#) module to have kwebcast fields returned in the search results.

mediaCollaboration - Navigate to the [MediaCollaboration](#) module to enable the ownership filter.

pageSize - Select how many search results to display per page. Remember, higher numbers may slow down page loading. We suggest a page size of 30 results for best performance.

SearchContext - Choose how search suggestions are shared between KMS instances.

SearchContext How are search suggestions shared bewteen KMS instances

- suggestions are shared bet ▾
- suggestions are shared between all KMS instances
- suggestions are private per KMS instance
- suggestions are shared between KMS instances having the same search context below

- Suggestions are shared between all video portal instances.
- Suggestions are private per video portal instance.
- Suggestions are shared between video portal instances having the same search context below:
 - An additional field will open named **CustomSearchContext** - Fill in the [CustomSearchContext](#) field with a privacy context. This allows search suggestions to be shared with apps having the same context. For example, if you have many video portal sites and want suggestions shared between two, type in a context like 'MediaSpace Travel' in the Search module's [CustomSearchContext](#) field for both. This links the sites, enabling shared suggestions.

Your **SearchContext** selection determines the 'recent searches' suggestions that will display in the search box.

Configure the remaining settings as follows:

showMediaSearch - Choose to display or hide the on-page media search.

inVideoPageSize - Choose the number of results to show in the media entry page's timeline tab 'search in media' feature (for example, 5).

instantSearch - Choose whether search results on the global search page should appear instantly or only after pressing **Enter**. We recommend lowering the page size to allow faster results population.

This does not apply to the header on the navigation bar.

showinfo - Select 'Yes' to provide an information icon ⓘ next to the search field.

infotext - This text will show as a tool tip when hovering over the information icon ⓘ . If left empty, the following default text will be used: *To search for an exact match, please use Quotation Marks. Example: "computer"*

When you have finished, click **Save**.

For Theming users

If you have Theming enabled on your site, this is the section for you. Just make sure to set the **globalsearch** configuration to 'Yes', found under the **Features** section of the [Theming](#) module:

features Collapse

Choose which of the theming features and pages to enable. Once a feature is set to **Yes**, the theming based page layout and design will be applied to all users, and be affected by the selected theme in the **CurrentTheme** field. Keep a feature set to **No** to be able to preview it before enabling using the Preview feature, as the 'Preview' feature will show all pages as if they are set to **Yes**.

NOTE: Some theming based pages and features won't be shown in the list, as they are theming based only and cannot be used without the theming module enabled (see module description for more pages)

header	Yes ▾	
The header feature is a must when using any of the theming features and pages set. Keeping it set to No will result in different headers in different pages on the site.		
login	Yes ▾	Configured from the login section
mediapage	Yes ▾	
Turn on the theming based media page design for all types of media, including draft, video, audio, image, ivq, live, kwebcase, interactive (path), meeting rooms, and playlist. Note: Only player v7 is supported on these pages. Please make sure to update all players to the v7 player version.		
globalsearch	Yes ▾	Turn on the theming based global search page.

Theming module

allContentText - This section is specifically for using the search page as a homepage. Check it out [below](#) if you're interested!

Search

Module Info

Info

The search module provides and controls the search capabilities on the site, such as the search bar on the header, and the global search page (<https://15932.nvq2.mediaspace.kaltura.com/search>). In addition, when using the theming module, this module provides a copy of the search page in the form of a "All content" page (<https://15932.nvq2.mediaspace.kaltura.com/all-content>) with additional description text at the top of the page. This is a KMS only module.

allContentText

View and search all published content of the site.

Configure the remaining settings as follows:

GalleryResults - Choose to display or hide the gallery results on the global search page.

ChannelResults - Choose to display or hide the channel results on the global search page.

eSearch

Choose searchable data on your site by using the eSearch options (matches in the title and subject of media are always included).

tags - Set to 'Yes' to search for media tags and have tags returned in the search results.

Owner - Set to 'Yes' to search for media owners and return results based on media they own.

Refid - Set to 'Yes' to have media reference IDs searched for and returned in the search results.

captions - Set to 'Yes' to have captions searched for and returned in the search results. Please note this feature can be enabled regardless of the [captions module](#) status.

customMetadata - Navigate to the [Customdata](#) module to configure the handling of custom metadata in the search results.

kwebcast - Navigate to the [Kwebcast](#) module to configure which kwebcast fields will be returned in the search results.

mediaCollaboration - Navigate to the [MediaCollaboration](#) module to enable the ownership filter.

pageSize - Select how many search results to display per page. Remember, higher numbers may slow down page loading. We suggest a page size of 30 results for best performance.

SearchContext - Choose how search suggestions are shared between KMS instances.

The screenshot shows a dropdown menu for the 'SearchContext' field. The label 'SearchContext' is on the left. The dropdown is open, showing four options: 'suggestions are shared bet', 'suggestions are shared between all KMS instances', 'suggestions are private per KMS instance', and 'suggestions are shared between KMS instances having the same search context below'. The first option is selected, and the second option is highlighted in blue. To the right of the dropdown is the text 'How are search suggestions shared bewteen KMS instances'.

- Suggestions are shared between all KMS video portal instances.
- Suggestions are private per KMS video portal instance.
- Suggestions are shared between KMS video portal instances having the same search context below:
 - An additional field will open named **CustomSearchContext** - Fill in the [CustomSearchContext](#) field with a privacy context. This allows search suggestions to be shared with apps having the same context. For example, if

you have many video portal sites and want suggestions shared between two, type in a context like 'MediaSpace Travel' in the Search module's `CustomSearchContext` field of both. This links the sites, enabling shared suggestions.

Your **SearchContext** selection determines the 'recent searches' suggestions that will display in the search box.

Customizing search filters

Choose which filters to display on the search filters. This will affect search in all locations.

MediaType	<input type="checkbox"/> Yes ▾
Webcasts	<input type="checkbox"/> Yes ▾
Captions	<input type="checkbox"/> Yes ▾
Duration	<input type="checkbox"/> Yes ▾
CreationDate	<input type="checkbox"/> Yes ▾
LastUpdateDate	<input type="checkbox"/> Yes ▾
Ownership	<input type="checkbox"/>
PublishStatus	<input type="checkbox"/> Yes ▾
Scheduling	<input type="checkbox"/> Yes ▾

MediaType - Provides the ability to filter content by type, such as video, image, audio, and more.

Webcasts - Provides the ability to filter live content by its scheduling time.

Captions - Provides the ability to filter content with or without captions.

Duration - Provides the ability to filter content by duration of the media.

CreationDate - Provides the ability to filter content by creation date of the media.

LastUpdateDate - Provides the ability to filter content by the last update date of the media.

Ownership - Configured from the [mediaCollaboration module](#).

PublishStatus - Provides the ability to filter content by its publishing status. Available for the [My Media page](#) only.

Scheduling - Provides the ability to filter content by its scheduling status. Available for the [My Media page](#) only.

To control customized filters, please visit the [customData module](#).

When you have configured all the settings, don't forget to activate the global search page by setting the **globalsearch** configuration to 'Yes', found under the **Features** section of the [Theming](#) module.

Below is an example of a Theming-based global search page:

Global search as homepage

allContentText - Enter the text you want to display at the top of the page (HTML markup is supported).

allContentText

Enter text to display at the top of the 'All content' page. HTML markup is supported.
 Note: Only available for **theming** based search page.

View and search all published content of the site.

Next, you'll need to set up the page in the [Navigation module's pre-menu](#) section. This ensures users land on it first when logging in.

Below is an example of a global search page that also serves as a homepage (Theming):

The screenshot displays the Kaltura 'All Content' interface. At the top, there is a navigation bar with 'Channels', 'Webcasts', 'Help', 'Resources', and '+ Create' buttons, along with a search bar and user profile icons. The main heading is 'All Content', with a subtext 'View and search all published content of the site.' Below this, a search bar shows '2754 Result found'. A left sidebar contains various filters: 'Sort By', 'Media Type', 'Webcasts', 'Ownership', 'Captions', 'Duration', 'Creation Date', 'Last Update Date', 'Media Release Day', and 'Related Products'. The main content area lists several video items:

- Rec Itamar Friedman Sparkpro lecture**: Rec Itamar Friedman Sparkpro lecture. Duration: 01:10:50. Tags: lecture, all.
