

# Introduction to Auth broker

Last Modified on 06/04/2026 9:15 am IDT

 This article is designated for administrators.

## About

Auth Broker is a central gateway that manages authentication at the partner (account) level across Kaltura applications. It supports external identity providers (IdPs) using the SAML and OAuth 2.0 protocols.

Auth Broker is currently used in:

- legacy Video Portal
- Rich Media Content Management System (Rich Media CMS)
- Events
- Webinars

Users authenticated through Auth Broker are shared users - they can access multiple applications within the same partner account.

## Key benefits

- Set up and manage SAML profiles once, then subscribe to them from multiple applications.
- Streamline authentication across your Kaltura environments.
- Reduce administrative overhead by centralizing IdP configurations.

To enable Auth Broker or learn more, contact your Kaltura representative.
