

How can I disable analytics for specific KMC roles?

Last Modified on 06/16/2024 2:30 pm IDT

This article is designated for administrators.

About

If you'd like to disable analytics for a specific KMC role, you can do so via the KMC **Roles** tab.

For more information about KMC roles, visit our article [Administration pages](#).

Access the Roles tab

1. Log into your KMC and click the administration menu icon .

The **Users** page displays.

2. Click the **Roles** tab.

The Roles page displays.

Disable analytics

1. Navigate to the desired KMC role.
2. Click the **three dots menu** at the end of the row and choose **Edit** from the dropdown menu.

The **Edit Role** page displays.

3. Scroll down until you reach **Video Analytics**.
4. Click the toggle button at the end of the row to disable it (it will turn from blue to grey).
5. Click **Save**.

A confirmation message displays: *Changes will take effect immediately. Browser page refresh should be recommended to the existing users associated with this role.*

6. Click **OK**.

This will now hide the analytics page for that specific KMC role across KMC, KAF and KMS (video portal) instances.
