About

Embedding puts videos right on your site, so users stay put without being sent elsewhere. Use our simple embed code for responsive, mobile-friendly videos in no time. This guide covers the basics of embedding video on your site.

Access the Share & Embed page

1. Log into your KMC.

The **Entries** page displays by default.

2. Navigate to the entry you want to share and embed.

There are two ways to access the Share & Embed function:

- Click on the entry.

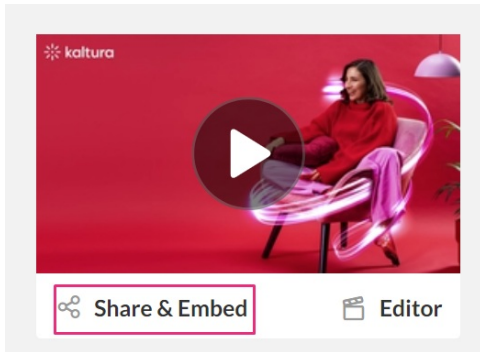

The entry details page displays.

The screenshot shows the Kaltura Content Studio interface. At the top, there is a navigation bar with tabs for CONTENT, STUDIO, ANALYTICS, and SERVICES DASHBOARD, along with a '+ Create' button and user profile information. Below the navigation bar, there is a search bar and filters for 'Filter Categories' and 'Refine'. The main content area displays a table of 365 entries. The table has columns for Thumbnail, Name, ID, Type, Created On, Duration, Plays, and Status. The first entry is 'How to add file...' with ID '1_6k4w27y3', created on 11/30/2023 at 10:22, with a duration of 01:09 and 20 plays. Other entries include 'Kaltura-Strea...', 'logo_intro_1', 'logo_intro_2', and 'logo_outro_2'.

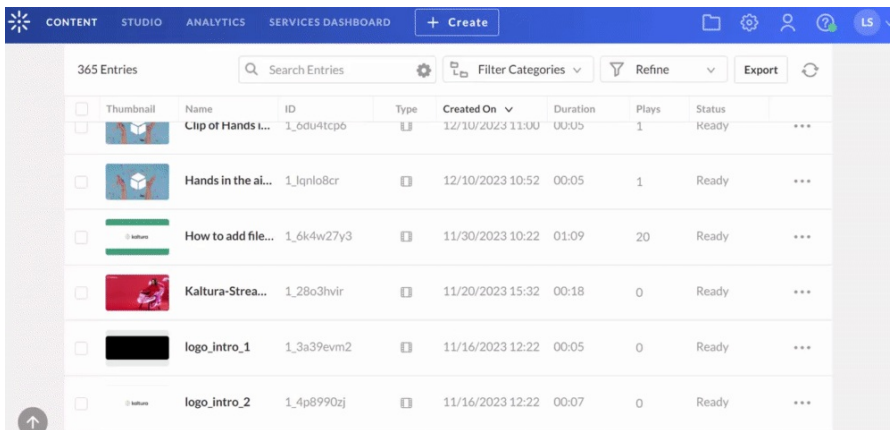

Thumbnail	Name	ID	Type	Created On	Duration	Plays	Status
	How to add file...	1_6k4w27y3		11/30/2023 10:22	01:09	20	Ready
	Kaltura-Strea...	1_28o3hvir		11/20/2023 15:32	00:18	0	Ready
	logo_intro_1	1_3a39evm2		11/16/2023 12:22	00:05	0	Ready
	logo_intro_2	1_4p8990zj		11/16/2023 12:22	00:07	0	Ready
	logo_outro_2	1_ory4qg8b		11/16/2023 12:22	00:05	0	Ready

- Below the video thumbnail, click **Share & Embed**.

OR

- o Click the **3 dots menu** to the right of the entry.
- o Click **Share & Embed**.

The **Share & Embed** page displays.

6 Embed Type ? IFrame Embed ▾

7 Support for HTTPS Embed Code

Select your preferred player from the **player drop-down menu (1)**. A search is also available when you open the players drop-down list. To learn more about players, visit our article [The Kaltura Player Studio - Getting Started](#).

If you'd like to define the order in which the players are listed, click the **settings icon**  to open the menu **(2)**.

Expand / hide icon (3) - (Optional) Click to reveal or hide the Embed code options.

Standalone Preview (4) - (Optional) Click to view a standalone page with this player by clicking on the provided link.

Scan Code for Mobile Preview (5) - (Optional) Scan the QR code to preview the content in your mobile device.

The QR code and standalone links are for preview use only. Do not use these links for production purposes.

Advanced Settings

The embed code, short link and QR code are regenerated for each change in the advanced settings. The changes are saved and reloaded for further use.

Embed types

Select the **Embed Type (6)** from the drop-down menu.

Embed Type 	IFrame Embed	^
	Dynamic Embed	
	IFrame Embed	✓
	Auto Embed	
	Thumbnail Embed	

Support for HTTPS Embed Code

The following options are available:

- **Dynamic Embed** - This is the preferred method to dynamically embed the Kaltura player into web sites and web applications.
- **Iframe Embed** (default) - iframe embed (no page JavaScript) is good for sites that do not allow 3rd party JavaScript to be embedded on their pages. This mode fits

more stringent page security requirements while supporting and HTML5 delivery.

- **Auto Embed** - Auto embed is concise embed code and is good for quickly getting a player or widget onto the page without any run time customization.
- **Thumbnail Embed** - This embed allows you to embed a video to a page without loading the player. The embed will display the video thumbnail image until the play button is clicked and only then will the player load. This is useful when embedding many players in the same page as it decreases the page load time.

Support for HTTPS embed code (7) - (Optional) Toggle on if you intend to put the player on pages that are delivered over HTTPS. The HTTPS embed URLs use protocol relative URLs so that the same embed code also works for non-secure delivery.

Support for
HTTPS Embed
Code

Logic for defining the delivery method is automated by the Kaltura player to ensure the best user experience.

If you are using Access Control Profiles and are embedding a V7 player, please note that Domain Restriction is not supported with Iframe embed. This is due to the referrer which is always taken from the parent domain, and there is no access to parent domains in the Iframe element.

Embed your video

When you're ready to embed the video, click **Copy** under the window that displays the embed code.

Embed Code

```
<iframe type="text/javascript"
src="https://cdnapisec.kaltura.com/
p/4834032/embedPlaykitJs/uiconf
_id/50952692?
iframeembed=true&entry_id=1_28
e2bvir" style="width: 560px;
```

Copy

Select the platform you want to share your media to, and paste the embed code into

the embed field.

Embed code examples

Dynamic Embed

```
<div id="kaltura_player_419173545" style="width: 560px;height: 395px"></div>
<script type="text/javascript"
src="https://cdnapisec.kaltura.com/p/4834032/embedPlaykitJs/uiconf_id/50952692"></script>
<script type="text/javascript">
try {
var kalturaPlayer = KalturaPlayer.setup({
targetId: "kaltura_player_419173545",
provider: {
partnerId: 4834032,
uiConfId: 50952692
}
});
kalturaPlayer.loadMedia({entryId: '1_fwzaeesq'});
} catch (e) {
console.error(e.message)
}
</script>
```

Iframe Embed

```
<iframe type="text/javascript" src='https://cdnapisec.kaltura.com/p/4834032/embedPlaykitJs/uiconf_id/50952692?
iframeembed=true&entry_id=1_fwzaeesq' style="width: 560px; height: 395px" allowfullscreen webkitallowfullscreen
mozAllowFullScreen allow="autoplay *, fullscreen *, encrypted-media *" frameborder="0"></iframe>
```

Auto Embed

```
<div id="kaltura_player_30467316" style="width: 560px;height: 395px"></div>
<script type="text/javascript" src='https://cdnapisec.kaltura.com/p/4834032/embedPlaykitJs/uiconf_id/50952692?
autoembed=true&targetId=kaltura_player_30467316&entry_id=1_fwzaeesq'></script>
```

Using HTML

You can create a simple HTML file with the embed code added to the body, as seen in the example below:

1. Create a simple Html file:

```
<!DOCTYPE html>
<html>
<head> <meta charset="utf-8"> <meta http-equiv="Content-Type" content="text/html; charset=utf-8"/>
</head>
<body>
</body>
</html>
```

2. Paste the embed code from the clipboard to the body:

```
<!DOCTYPE html>
<html>
<head> <meta charset="utf-8"> <meta http-equiv="Content-Type" content="text/html; charset=utf-8"/>
</head>
<body>
<div id="kaltura_player_30467316" style="width: 560px;height: 395px"></div>
<script type="text/javascript" src='https://cdnapisec.kaltura.com/p/4834032/embedPlaykitjs/uiconf_id/50952692?
autoembed=true&targetId=kaltura_player_30467316&entry_id=1_fwzaeesq'></script>
</body>
</html>
```

You now have an embedded player on your website!
