About

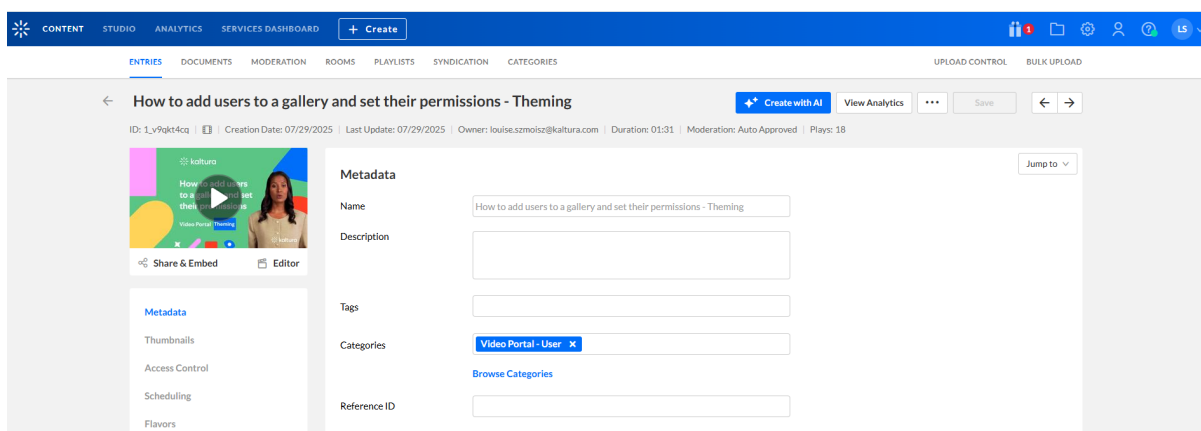

Embedding lets you add media directly to your website or application so viewers can watch without leaving your page. This article shows you how to share and embed media from the Rich Media CMS.

Access the share and embed page

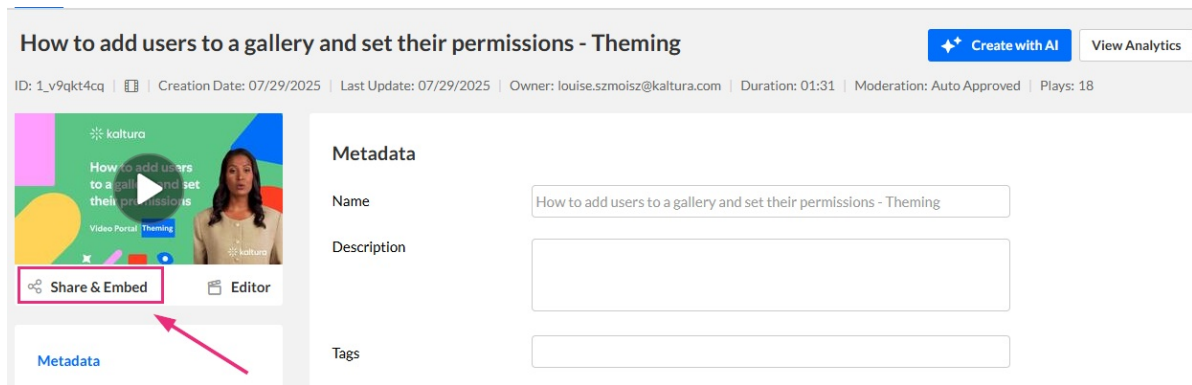

1. Log into your Rich Media CMS.
The **Entries** page displays by default.
2. Find the media entry you want to share and embed, and click its title or thumbnail.

The entry details page displays.

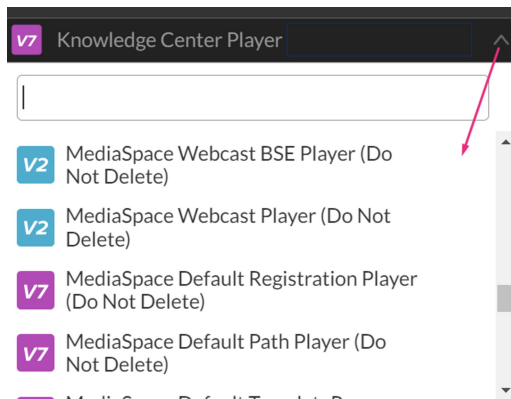

3. Below the media thumbnail, click **Share & Embed**.

The 'Share & Embed' page opens.

Choose your player

From the player drop-down menu at the top, select the player you want to use. You can search by name within the player list.

To learn more about players, visit our article [Introduction to the Player Studio](#).

Select embed options

1. Click the **Standalone Preview** link to view a standalone page with this player (or scan the **QR code** to preview the content in your mobile device).

Scan Code for Mobile Preview 

[Advanced Settings >](#)

The QR code and standalone links are for preview use only. Do not use these links for production purposes.

2. Choose the **embed type** that fits your needs.

Embed Type ?

Support for HTTPS Embed Code

Responsive

The following options are available:

- **Dynamic Embed** - This is the preferred method to dynamically embed the Kaltura player into web sites and web applications.
- **Iframe Embed** (default) - iframe embed (no page JavaScript) is good for sites that don't allow third-party JavaScript to be embedded on their pages. This mode fits more stringent page security requirements while supporting and HTML5 delivery.
- **Auto Embed** - Auto embed is concise embed code and is good for quickly getting a player or widget onto the page without any run time customization.
- **Thumbnail Embed** - This embed allows you to embed a video to a page without loading the player. The embed will display the video thumbnail image until the play button is clicked and only then will the player load. This is useful when embedding

many players in the same page as it decreases the page load time.

(Optional) Toggle on **Support for HTTPS embed code** for secure (HTTPS) pages.

(Optional) Toggle on **Responsive** to make the player adjust automatically to the size of its container.

Support for HTTPS Embed Code

Responsive

 If you are using access control profiles and are embedding a V7 player, please note that domain restriction is not supported with iframe embed.

Copy and embed your code

1. When you're ready to embed the media, click **Copy** under the window.

Embed Code

```
<iframe type="text/javascript"
src="https://cdnapisec.kaltura.com/
p/4834032/embedPlaykitJs/uiconf
_id/50952692?
iframeembed=true&entry_id=1_28
a2hvir!ctdo="width:560px"
">
```

 **Copy**

2. Paste the code into your website or platform.
