

Create a recording with Express Capture - Theming

Last Modified on 02/10/2025 1:03 pm IST

 This article is designated for all users.

About

Record content effortlessly with Kaltura's Express Capture, directly from your browser - no extra software needed. Easily add your recording to your Video Portal or KAF application when you're done!

These instructions are for [Theming](#) users. If you don't have Theming enabled on your account, please see our article [Express Capture](#).

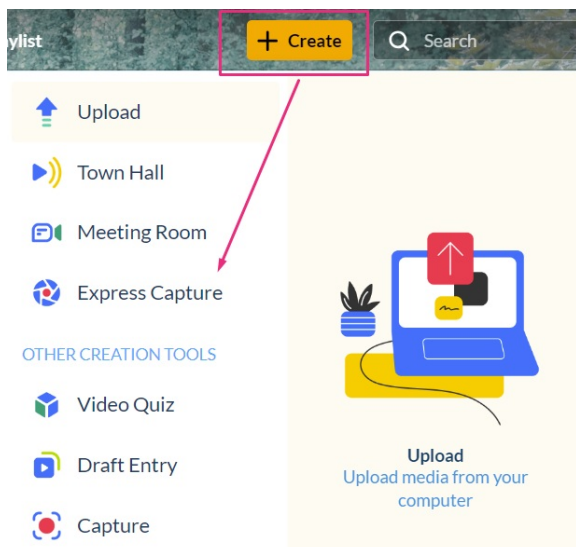

Before you start

Enable the recorder module - Express Capture requires the [Recorder module](#) to be enabled. Once you enable and save the module configuration, the V7 player is created automatically.

Check System Requirements - Ensure your instance uses HTTPS, as Express Capture does not work over HTTP. Additionally, verify that your browser supports WebRTC. For more details, refer to the [Kaltura Express Capture Supported Browsers / Devices](#) guide.

Create a recording

Select **Express Capture** from the **+ Create** drop-down menu.

The Record Media page displays.

Express Capture

You can record your screen, yourself, or both, and choose whether to include only audio or video. If you choose to record both your screen and yourself, your video will contain two side streams that can be laid out in different ways in the player.

Check your settings

The default camera and audio settings are your personal computer's webcam and audio device.

Camera

1. Click on the arrow next to the camera to display the available cameras and the on/off toggle for the camera.

Express Capture

You can record your screen, yourself, or both, and choose whether to include only audio or video. If you choose to record both your screen and yourself, your video will contain two side streams that can be laid out in different ways in the player.

2. Select the camera type, or toggle off the camera if you don't want to record yourself.

Audio

1. Click on the arrow next to the microphone icon to display the available microphones and the on/off toggle to record audio.

Express Capture

You can record your screen, yourself, or both, and choose whether to include only audio or video. If you choose to record both your screen and yourself, your video will contain two side streams that can be laid out in different ways in the player.

2. Toggle the audio off if you want to create a visual-only recording.

The audio indicator displays on the top left of the screen if you're recording audio only.

Screen

1. Click on the arrow next to the screen icon to display the on/off toggle for the screen share.

Express Capture

You can record your screen, yourself, or both, and choose whether to include only audio or video. If you choose to record both your screen and yourself, your video will contain two side streams that can be laid out in different ways in the player.

2. Toggle on (blue = on) to open the screen share window.
3. Choose the browser tab, window or entire screen you want to share.

Choose what to share with .mediaspace.kaltura.com
The site will be able to see the contents of your screen

4. Click **Share**.

When you share a **tab**, a notification displays at the top of your browser.

When you share a window or screen, the following notification displays at the bottom of your screen.

5. Click **Stop sharing** to stop the screen share.

Start recording

1. Click the red button to begin your recording.

A three second countdown displays on the screen.

Express Capture

You can record your screen, yourself, or both, and choose whether to include only audio or video. If you choose to record both your screen and yourself, your video will contain two side streams that can be laid out in different ways in the player.

A timer displays next to the Stop button as the recording is in progress.

Express Capture

You can record your screen, yourself, or both, and choose whether to include only audio or video. If you choose to record both your screen and yourself, your video will contain two side streams that can be laid out in different ways in the player.

2. Click the red stop button to end your recording. The following window displays.

Click the play button in the middle of the screen to preview the recording. If there's no audio, test your computer's speakers by watching a YouTube video or adjusting the volume in the control panel. If the webcam isn't showing, make sure it's turned on. For built-in laptop cameras, ensure the screen is open and the camera is enabled.

If there are issues with inputs, check out our article [Input settings](#).

3. If you'd like to discard the recording and do a new one, click **Record Again (1)**. You'll be reverted to the main screen where you can click the red button to record again.

Save your recording

When you're satisfied with your recording (after as many retakes as needed), you can download the recording straight to your computer by clicking **Download a Copy (2)**.

Downloading directly to your computer generates a WebM file.

You can also save the recording to your **My Media** library in the Video Portal as follows:

1. Click **Use This (3)**.
The edit media window displays.

Audio Recording - Tue Dec 26 2023 13:44:37 GMT+0200

Date Established

Cancel Save

The uploaded file receives a default name and is saved automatically. The name is of the following format: “Video Recording - July 23, 2022 7:43pm EST” or “Audio Recording - July 23, 2022 7:43pm EST”.

2. Enter metadata information for the media: Name, description, tags, department name / division, and date. To learn more about editing your recording details, see our article [Edit Media](#).
3. Click **Save**. (If you click Save before the file is completely uploaded, the media information is saved after the media is uploaded.)

To view the recording, click **Media Page** at the top of the edit page, or navigate to **My Media**. For more information about the My Media library, visit our article [My Media](#).
