

# Kaltura Webcasting - Managing Live Captions

Last Modified on 09/16/2024 12:21 pm IDT

 This article is designated for all users.

## About

Kaltura Webcasting supports two main types of live captions for webcasts: live captions that are ingested with the original stream, and live captions that are produced through Kaltura's Reach services and added onto the stream.

## Using the Kaltura Live Captioning Service

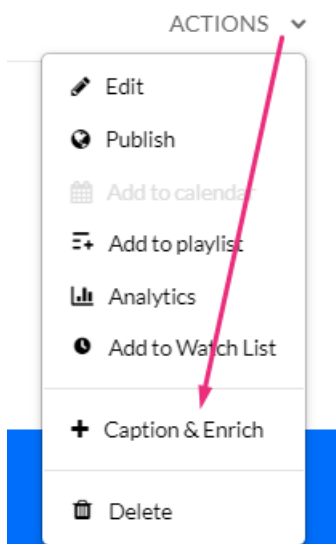

Kaltura's Live Captioning service offers both **Machine Generated Live Captions (ASR)** as well as **Human Generated Live Captions (Professional)**. This service is currently available only in the English language; additional languages will be added later.

Once Live Captions are enabled on your account, any webcasting event will allow ordering a live captioning task through the scheduled event entry page in KMS or via the KMC edit entry window. This article will walk you through the ordering process of live captions via both applications.

 In case the Live Captions option is not available to you, please contact your Kaltura representative to have it enabled on your account.

## Ordering Live Captions via MediaSpace Video Portal

1. Select **Caption & Enrich** option from your live event **Actions** drop-down menu

The captions and enrichment services screen displays. It is divided into two sections: **Requests** and **Order Captions & Enrichment Services**.

The **Requests** section lists existing captions requests.

 If there are no existing captions requests this section will be left empty.

Details Share Attachments  ACTIONS 

---

Captions Requests 

---

REQUEST DATE 	SERVICE TYPE	FEATURE	LANGUAGE	STATUS 	
10/07/17	Professional	Translation	English	 Completed	 
05/07/17	Machine	Captions	English	 Processing	
13/06/17	Professional	Captions	Spanish	 Pending Approval	 
24/05/17	Professional	Captions	German	 Rejected	

The **Order Captions & Enrichment Services** section is used to add Reach services to the Live Event:

## Order Captions & Enrichment Services

Service:	Source Media Language:
Professional	English
Feature:	Turnaround Time:
Live Captions	Best Effort
Live Captions Start Time:	Live Captions End Time:
At the beginning of the event	At the end of the event
We recommend to extend the live captions scheduling to avoid disconnections before the event ends	
Instructions & Notes:	
<input type="text"/>	
<input type="submit" value="Submit"/>	

2. Use the following fields to order live captions for the live event:

- **Service**
  - Machine - for automated captioning process
  - Professional - For human captioning
- **Source Media Language** - Select the spoken language of the live stream (currently only English is supported).
- **Feature** - Select Live Captions
- **Live Captions Start Time** - Select a time interval in case you'd like the captions service to start before the scheduled start time of your event.
  - At the beginning of the event.
  - 15 minutes before the event starts. (Recommended)
  - 30 minutes before the event starts.
  - 60 minutes before the event starts.
- **Live Captions End Time** - Select a time interval in case you'd like to keep the captions service running if the event runs longer than expected.
  - At the end of the event.

- 15 minutes after the event ends.
- 30 minutes after the event ends.
- 60 minutes after the event ends.

✔ We recommend extending the live captions scheduling to avoid disconnections before the event ends. Technically, there should be at least a 3-minute grace period between the live caption request and the live caption start time. E.g. in case your event is scheduled for 12:00, you can either order captions to start on the start time of the event up to 11:57 or, if you wish to start captioning 15 minutes before the event order must be placed before 11:42.

3. Click **Submit**.

## Ordering Live Captions via KMC

1. Log into your KMC.

The **Entries page** displays.

2. Locate the webcasting entry and click the 3 dots menu to the right.

3. Select **Captions & Enrich** (or choose the Captions tab from within the specific entry page).

Thumbnail	Name	ID	Type	Created On	Duration	Plays	Status	
<input type="checkbox"/>	 New Webcasting Event	1_s0ap8m60		11/02/2024 15:49	N/A	0	Ready	⋮
<input type="checkbox"/>	 Tutorial How to Create a Powtoon (2)	1_j1u7nui8		29/01/2024 15:31	02:56	2		
<input type="checkbox"/>	 Tutorial Intro to Powtoon (2)	1_cdyzlmzy		29/01/2024 15:31	03:40	1		
<input type="checkbox"/>	 Tutorial Exporting (1)	1_2irp4dev		29/01/2024 15:31	01:32	0		

The **Captions & Enrich** page displays.

## Existing Requests

No requests were found **×**

## Order Captions &amp; Enrichment Services

Service:	Source Media Language:
Machine	English
Feature:	
Live Captions	
Live Captions Start Time:	Live Captions End Time:
At the beginning of the event	At the end of the event

4. On the **Captions and Enrichment Services** screen follow steps 2 and 3 as described in the KMS section above.

**TIPS**

- Ensure your content starts streaming a few minutes before the scheduled event to guarantee captions cover the entire session.
- Live caption sessions last up to 8 hours.
- For machine captioning, order at least 15 minutes prior to the event; for human captioning, allow 5 working days.
- Cancel machine-generated jobs anytime before the session; human captioning requires cancellation at least 2 days before.
- Rescheduling an event with live captioning requires canceling and setting up a new job.
- VOD captions ordered for a live event will replace live captions.
- Reach live captions are available only for the primary stream; failover to a backup stream won't display captions.
- The event duration should be more than 10 minutes, otherwise, the live captions request might meet an error (min(600)/max(43200) valid time range in seconds).

**Ingesting captions with your video stream**

Kaltura supports live captions carried over the ingested stream using the CEA/EIA-608 and CEA/EIA-708 standards (aka embedded captions).

When setting up your encoder, make sure to annotate the caption track's language so it will be represented correctly in the Captions Selector menu in the player.

Go to the "Captions" tab on the relevant entry page in KMC to configure your ingested captions tracks.

### Captions

Reach captions

User ingested captions

CEA-708 Special Characters Support

#### Captions containers

ID	Protocol	Language	Label	
CC1	<input type="text" value="CEA-608"/>	<input type="text" value="English"/>	<input type="text" value="English"/>	<input type="button" value="−"/>

"Captions" tab in KMC

- Choose "User ingested captions" to ingest embedded captions with your video stream.
- Switch on CAE-708 if at least one of the captions tracks includes special characters.
- Add caption tracks containers for each of the ingested tracks
  - Choose CAE-608 or CAE-708 captions protocol
  - Select a language from the languages dropdown
  - Optionally customize the track's label
- You can remove unnecessary tracks by clicking the red "minus" button on the right of each track
- Don't forget to save your changes before leaving the "Captions" tab

## NOTES

1. When using special character sets like Asian languages with CEA/EIA-708 captions, set the "extract\_closed\_captions\_feature" admin tag. However, note this tag does not support captions on backup video streams during failover, and should NOT be set when Reach live captions are enabled.
2. For live captions to be ported to the session recording with the right labels, set a container for each caption stream using the liveStream.updateAPI as follows:
  - a. For CEA/EIA-608 tracks set track ID to CC1-CC4 (use CAPITAL letters for container ids)
    - a. id=CC1 language=eng label=english type=closedCaptions
    - b. id=CC2 language=ger label=german type=closedCaptions
  - b. For CEA/EIA-708 tracks set track ID to SERVICE1-SERVICE63 (use CAPITAL letters for container ids)
    - a. id=SERVICE1 language=jpn label=japanese type=closedCaptions
    - b. id=SERVICE2 language=chi label=chinese type=closedCaptions
  - c. CC (608) & SERVICE (708) containers can be used concurrently as long as unique container indices are being used.
    - a. id=CC1 language=eng label=english type=closedCaptions
    - b. id=CC2 language=ger label=german type=closedCaptions
    - c. id=SERVICE3 language=jpn label=japanese type=closedCaptions
    - d. id=SERVICE4 language=chi label=chinese type=closedCaptions

See [Kaltura VPaaS API Documentation](#) for further details about Kaltura's API.
