

## Documents in player

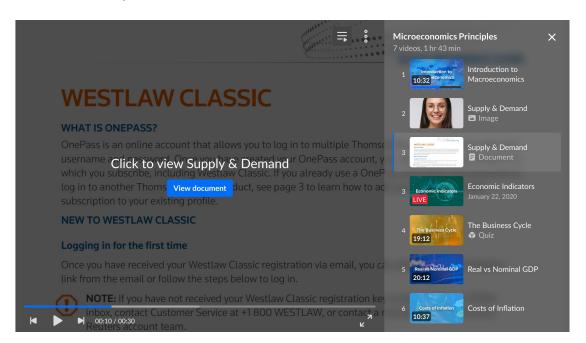

Last Modified on 11/08/2025 7:19 pm IST

28 This article is designated for all users.

## **About**

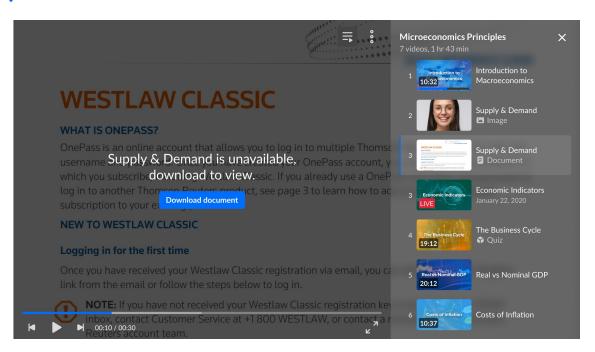

Kaltura's **Documents** plugin lets viewers access documents included with the media, such as items in a playlist. If downloads are enabled, users can download a document that isn't available for viewing.

The example below shows a document entry with a thumbnail preview. Click View Document to open it in a new tab.

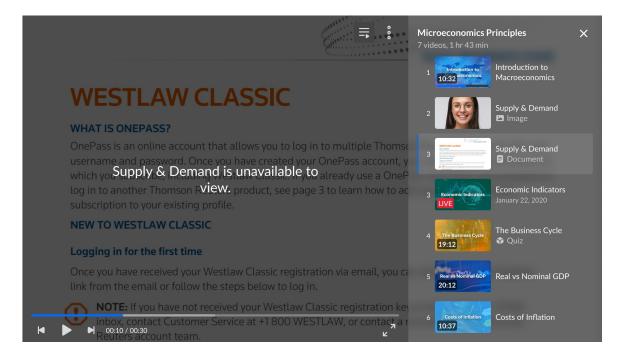

When a document isn't available for viewing, you can download it using the **Download Document** feature, provided it's enabled on your player.

Below is a document entry that's not available for viewing, and the **Download document** feature hasn't been enabled.

## Setup

To learn how to set the Documents plugin on the player, see Enable document support on the player.

## **Features**

- Document is presented in the playlist with a title and a document icon.
- Document download feature can be enabled to allow downloading documents when

unavailable for viewing.

• Thumbnail preview of document displays on the screen in the background.
