

# Enable clipping on a media item

Last Modified on 08/20/2024 2:51 pm IDT

 This article is designated for all users.

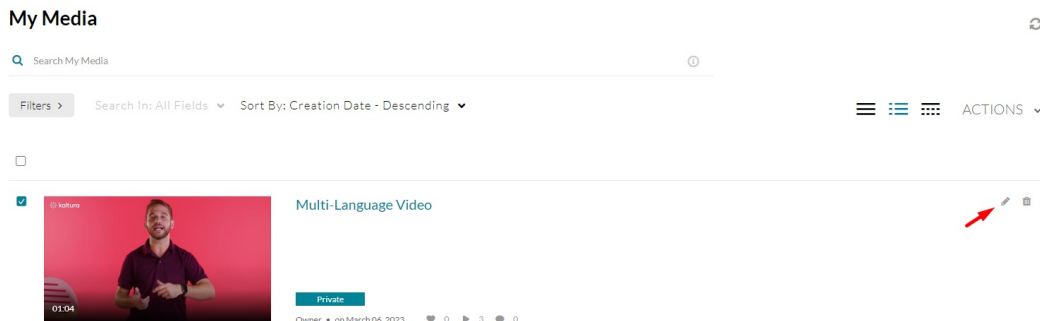

## About

Clipping creates a new entry from an existing one and lets you control the start and end time for the new entry. This is very useful if, for example, you want to shorten an intro to a long lecture or clip the lecture into several shorter clips divided by subjects. The clipped content appears in **My Media** as a new entry and doesn't affect the original one.

 Media owners can enable clipping on a media entry for any user with 'privateRole' or higher to create clips from their video.

## How to enable clipping

1. On the **My Media** page, click the pencil icon.

2. When the [Edit Media Page](#) opens, click the **Options** tab.

[Details](#) [Publish](#) [Options](#) [Collaboration](#) [Thumbnails](#) [Presenters](#) [Downloads](#) [Captions](#) [Attachments](#) [Timeline](#) [Replace Mec](#)

3. **Clipping** - Click “Enable everyone to create clips from this video”.

Clipping:  Enable everyone to create clips from this video

For guidance on creating clips from your media, see [Kaltura Video Editing Tools - Editor Tab](#).
