

Emaillogin module

Last Modified on 09/04/2024 11:03 am IDT

 This article is designated for administrators.

About

The **Emaillogin** module lets users log in with an authentication link sent to their email with no need for a password. To use it, you need to have an email service configured and an email template with the {MAGICLINK} token. Once set up, the authentication link can be used in registration, invite, and login processes. Each magic link can only be used once. If you need your magic link to be used more than once, please contact your Kaltura representative.

 This module requires the [Theming module](#) to be enabled. The general login page settings are set on the [Login module](#).

 This module is available by default for **Events**, but can be enabled for non-Events sessions upon request. Contact Kaltura to activate it.

 Ensure the password field is hidden or removed from the **registration form** in the [Basesiteregistration module](#).

Configure

1. Go to your Configuration Management console and click on the **Emaillogin** module.

You can also navigate directly using a link:

https://{your_KMS_URL}/admin/config/tab/emaillogin.

Modules

Emaillogin

Module Info

description

This module allows the application users to log in using an authentication link sent to their email. To use this module you must have an email service configured, and an email template to use with {MAGICLINK} token. Once setup, the authentication link token can be used in the registration, invite and login flows.
To generate a link for a single user navigate to the [user management](#) tab. To generate and download a bulk list of links use the button below.

[Generate links](#)

Note

- Depends on the [Theming module](#)
- The general login page settings are set on the [Login module](#)
- Make sure to hide or remove the password field from the registration form on the [BaseSiteRegistration module](#)

enabled	<input type="checkbox"/> Yes	Enable the Emaillogin module.
loginEmailTemplate	<input type="text" value="Choose a template"/>	Select which email will be sent to the user once login is requested. The email should be prepared in the emailTemplates module, and must contain the {magicLink} token to allow entrance to the site.
linkExpiration	<input type="text" value="900"/>	Set how long the link in the email to the user should be available (in seconds). Default is 900 seconds (15 minutes).
emailSentPageTitle	<input type="text" value="We've sent you an email."/>	The title of the page presented after the login link was requested.
emailSentPageText	<input type="text" value="Check your inbox to find the login"/>	The text content of the page presented after the login link was requested.
showAlternativeLogin	<input type="checkbox"/> No	Show a button to allow the user to input user id/password to login.
clickToLogin	<input type="checkbox"/> No	Enable the feature to request users to manually click a "Enter site" button after clicking the magic link in the email. This feature is intended to prevent robots and clients (such as Outlook security features) from invalidating the magic link.

2. Configure the following:

enabled - Set to 'Yes' to enable the module.

loginEmailTemplate - Select from the drop-down the email that will be sent to the user once login is requested (as shown in the example below). The email must first be prepared in the [emailTemplates](#) module, and must contain the **{magicLink}** token to allow entrance to the site.

loginEmailTemplate

Choose a template ▼

- Choose a template
- Reset Password magic link
- Confirm your email

linkExpiration

linkExpiration - Set how long the email link should be available (in seconds). The default is 900 seconds (15 minutes).

emailSentPageTitle - Enter the title text that you want to appear on the page after the login link is requested (as shown in the image below).

emailSentPageText - Enter the text that you want to appear on the page after the login link is requested (as shown in the image below).

showAlternativeLogin - Set to 'Yes' if you want to display a button for users to log in with their user ID and password as an alternative login method, as shown in the image below:

clickToLogin - Set to 'Yes' if you want users to manually click an **Enter site** button after using the magic link in the email (as shown in the image below). This feature helps prevent robots and security features, like those in Outlook, from invalidating the magic link.

AdditionalLink

additionalLink Collapse

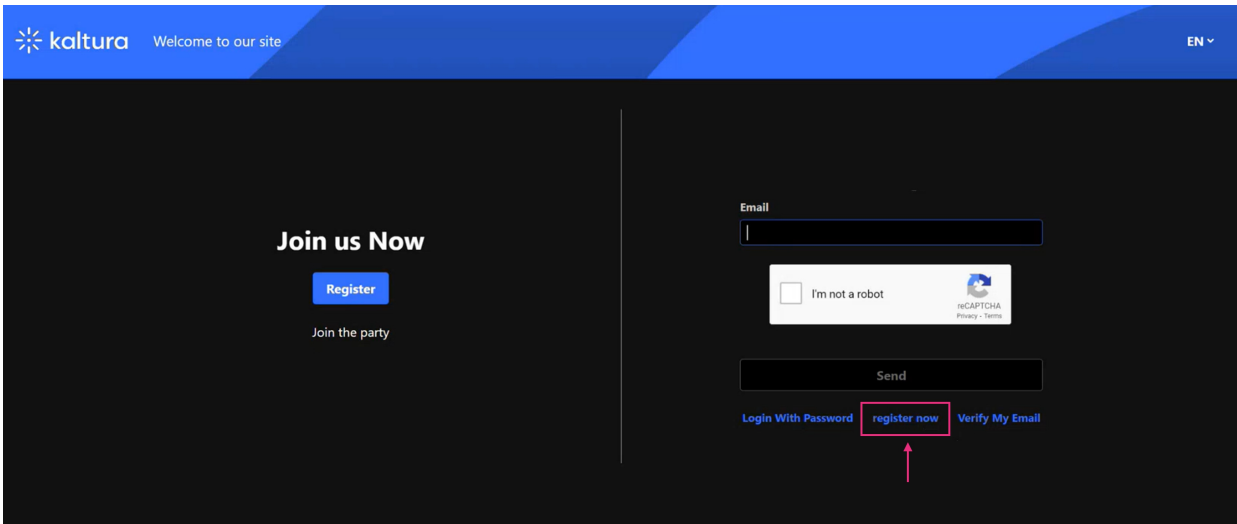

Add additional link below the login button.

linkText	<input type="text"/>	The additional link text.
linkURL	<input type="text"/>	The additional link URL.
newTab	<input type="text" value="New Tab"/>	Should the link open in a new tab or the same tab.

You can add an additional link as follows:

- **linkText** - Enter the text for the link.
- **linkURL** - Enter the URL of the link.
- **newTab** - Select from the drop-down whether you want the link to open in a **new tab** or the **same tab**.

The additional link displays on the page, as shown in the image below:

3. Click **Save**.

Once you have configured the module settings, navigate to the [Auth module](#) and make sure you select **Loginbyemail** in the auth type drop-down options.

Generate login links

After the module has been configured, you can distribute login links to users.

⚠ Please note that **each magic link can only be used once**. If you need your magic link to be used more than once, please contact your Kaltura representative.

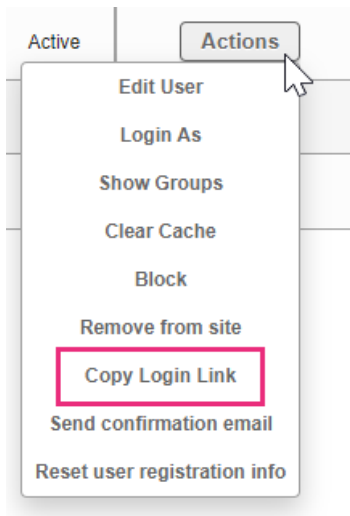

Single user

1. Go to the **Manage Users** tab in the Configuration Management console.

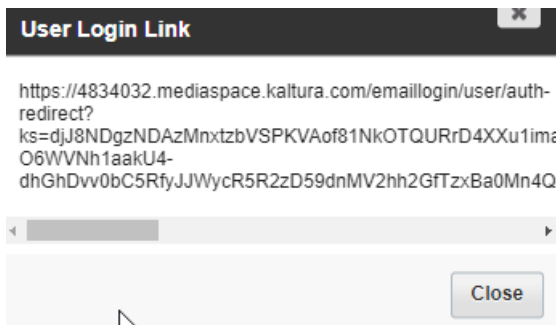

2. Navigate to the desired user and on the far right click the **Actions** button.

3. From the **Actions** drop-down options, select **Copy Login Link**.

The **User Login Link** window displays.

4. Click **Close**.

The link is copied

In bulk

1. At the top of the module page, click the **Generate links** button.
