

How to find all the Kaltura Capture entries via API?

Last Modified on 11/27/2024 1:04 pm IST

 This article is designated for administrators.

1. Go to the API console at <https://developer.kaltura.com/console/> (Sign In) or http://www.kaltura.com/api_v3/testme.
2. **Generate a KS** (relevant when Testme Console is used)
See [How to Start a Kaltura Session using the TestMe Console](#).
3. **Session Service:** baseEntry
4. **action:** list
5. **filter:** KalturaBaseEntryFilter
 - a. **Edit > adminTagsLike (string):** katuracapture
6. **Send**

Kaltura API session (string):
djJ8NDgzNDZMnyvjQsl5Ad6HF1zW

language (string):

Select service:
baseEntry

Select action:
list

filter (KalturaBaseEntryFilter):
KalturaBaseEntryFilter

pager (KalturaFilterPager):
KalturaFilterPager

adminTagsLike (string):
katuracapture

tagsLike (string):

tagsMultiLikeOr (string):

tagsMultiLikeAnd (string):

adminTagsMultiLikeOr (string):

adminTagsMultiLikeAnd (string):

 To filter the results before or after a specific date use the following filter parameters respectively: **createdAtLessThanOrEqualTo (int)** **createdAtGreaterThanOrEqual (int)**. For example, date May 27, 10 am UTC use the stamp 1622098820 (<https://www.unixtimestamp.com/>)

 When the output exceeds the page limit, use **pager (KalturaFilterPager)** to make all the entries displayed set **page size = 500** and **pageIndex = 1**, then 2, and so on.
