

Add media to your Watch List in Content Hubs

Last Modified on 04/15/2026 10:58 am IDT

 This article is designated for all users.

About

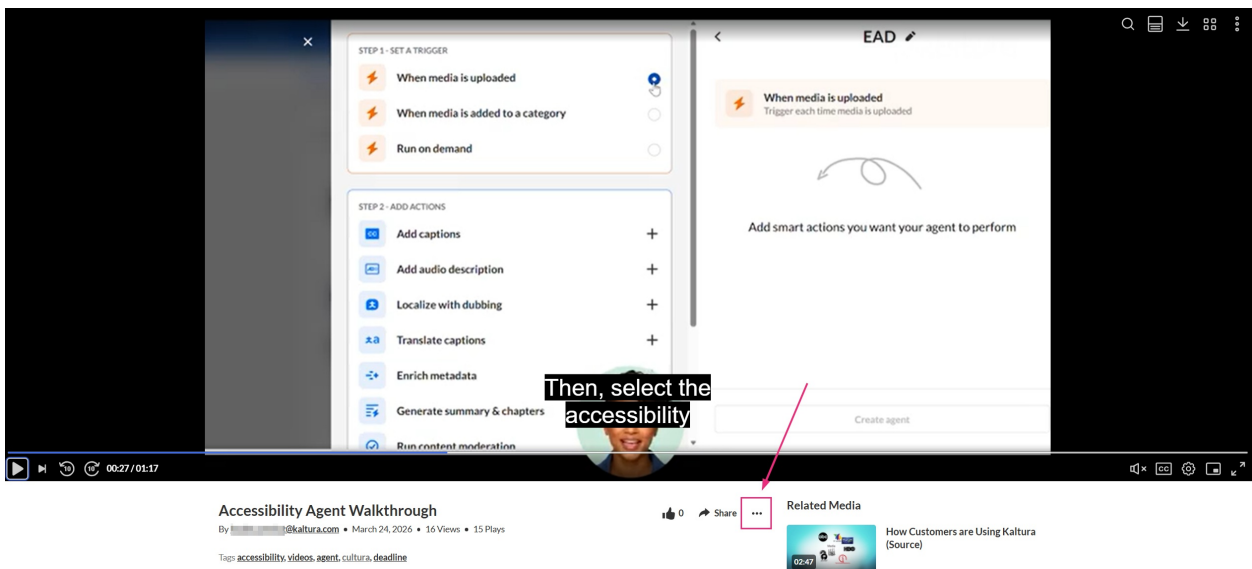

While browsing your Content Hub, you might come across media or upcoming events you want to save for later. Kaltura's Watch List lets you add them to a pre-built playlist, so you can easily find and watch them whenever it's convenient.

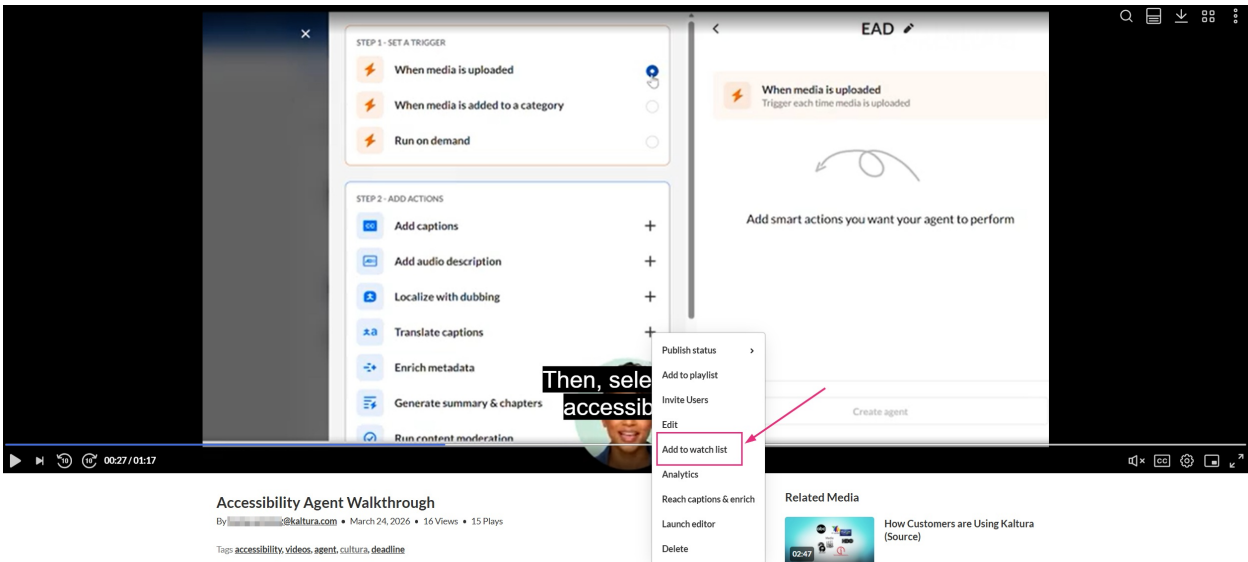

This feature requires the [WatchLater module](#) to be enabled.

Add media

While watching or browsing through videos, click the **three-dot menu** under the entry you want to save.

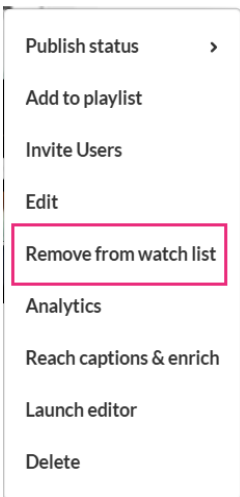

From the menu, choose **Add to Watch List**.

A success message displays: *Media successfully added to Watch List.*

If you change your mind, simply click **Remove from Watch List** to remove the entry.

After adding the media to your Watch List, it will appear at the top of the list on your Watch List page.

Watch List
