> 🧑‍💼 **This article is designated for administrators.**

About

The **Conditionalentrypageurl** module adds a button to the Entry page, which is displayed conditionally based on a custom metadata field. Follow the steps to log into the Configuration Management section and configure the Conditionalentrypageurl module.

> ℹ️
> This module is for both Theming and non-Theming users.

> ✅
> For technical support, contact Kaltura Customer Care. For all other inquiries, reach out to your Customer Success Manager.
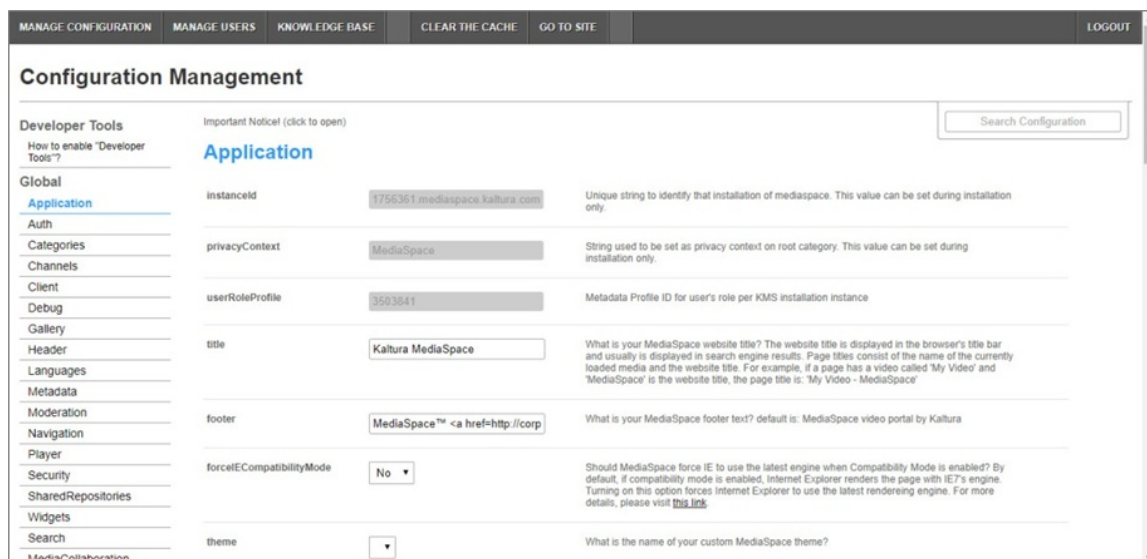

Before you begin

The button will display on the Entry page **only if** the following conditions are met:

1. A custom schema is added in the KMC.
2. The Customdata module is enabled and configured. The custom metadata profile displayed **depends** on the custom metadata profile selected on the Customdata module.
3. The metadata field that controls the button's visibility is set with a value.
4. A valid URL is provided in a separate custom metadata field designated for the button link.

Configure

1. Log into the Configuration Management console by going to your video portal URL and adding */admin* at the end.
2. Enter your Kaltura user ID and password.
3. Click **Sign In**.
   The Configuration Management console displays.

4. In the list of configurable items on the left of your screen, locate and click on Conditionalentrypageurl. (The item will be crossed out because it's disabled by default.)

> ⚠
>
> If this module is not in your video portal application, please get in touch with your Kaltura representative to inquire about adding it.

The Conditionalentrypageurl window displays.

The **Module Info** box displays the module name, description (what enabling this module allows users to do), and version number.

5. In the enabled pull-down list, select **Yes** to enable the Conditionalentrypageurl module.

Other configurable items following the enabled pull-down list are as follows.

Configuration Name	Options	Description
conditionalMetadataField	Depends on configuration of Customdata module.	The metadata field that controls whether the button will be displayed in the media page. If the metadata field value is one of: '0', 'false', 'no' - the button will not be displayed, otherwise it will.
urlMetadataField	Depends on configuration of Customdata module.	The metadata field that contains the URL. Note: this module does a basic verification of the URL value. If this metadata field's value is empty or doesn't have a valid URL, the button will not be displayed.
URLButtonIcon	None Add Star Full External Link Mail Share Download Upload Resolved Warning Circle Warning Triangle	Icon for the button (Example: icon-shopping-cart).
URLButtonColor	Free text	Background color for button in hex format (Example: #A7F51B)
urlButtonText	Free text	Text for the button

6. Click **Save.**

   You receive a notice that your configuration for Conditionalentrypageurl was saved and the cache was cleared.

Upload media and configure button

1. Upload media.
2. Navigate to the Edit media page.
3. Type in the conditional metadata field.
4. Select a value for URL Metadata field.
5. Click **Save**.
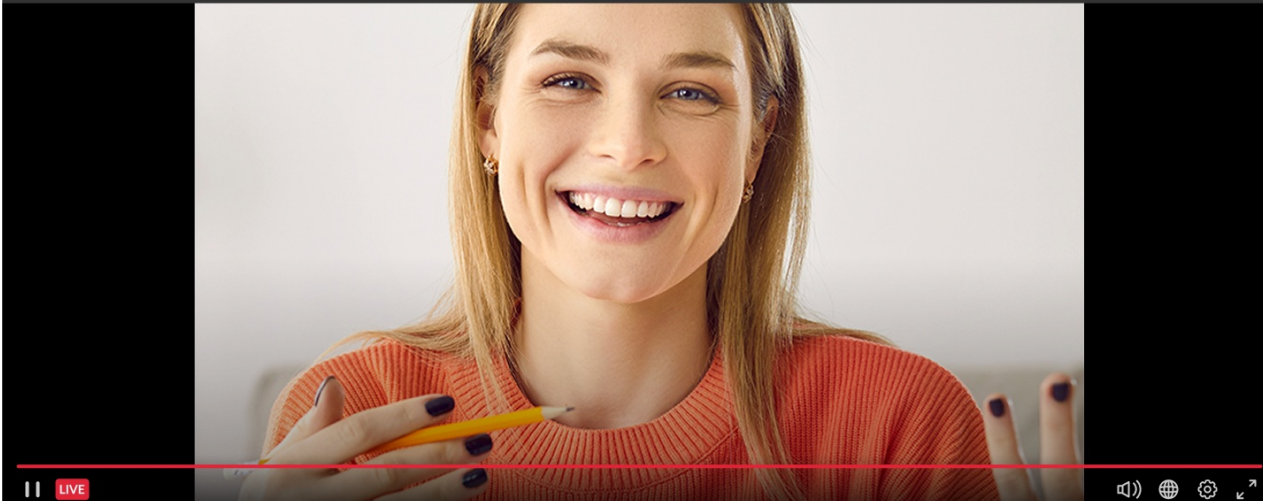

User experience

Once enabled, the button appears on the entry page for the end user.

This example shows the entry page for a Theming user, with the button circled.
