Embed Your Virtual Classroom or Webinar Anywhere

Content updated: 08/25/2025

> **Legacy notice**
> This article documents the **legacy KME room**. For our next-generation virtual classroom and collaborative meeting solution, please visit the **Kaltura Room documentation**.

You can create a simple iframe to embed the guest view of your virtual classroom on any website page.

- This article explains what you need to do to setup an iframe to embed your virtual classroom on any website page.
- This article does NOT review integrating your virtual classroom using API or LTI integrations. If you are interested in learning more about integrating this virtual classroom into your Learning Management System (LMS) or 3rd party portal, please contact your Kaltura representative. A support team member will be happy to discuss available options.

What is an iframe?

- An iframe (inline frame) is an HTML document that can be embedded inside another HTML document on a website.
- iframes are typically used to embed multimedia content into a web page.

Why embed your virtual classroom or webinar?

- I prefer having my class participants join directly via the *Invite Link*.
- Joining through the direct link is easy and the virtual classroom automatically scales to fit each participant's window. With an iframe, the size of the virtual classroom is fixed for all participants regardless the size of their screen.
- Embedding your virtual classroom is still a very nice option. If you want to have your participants join your virtual classroom or webinar from your website/blog or from a specific website, then embedding your virtual classroom lets you set that up.
- Let's say you are running a public class or webinar as a promotional event to attract more students or you have a room available to customers to connect directly with your support team.
- You can create a landing page and embed your virtual classroom or webinar directly on that page.
- Instead of sending direct room links to your participants, they can go to your landing page to join the live session.

What do you need to embed your virtual classroom or webinar?

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

- An account and an active virtual classroom.
- Destination web page or blog of which you are a webmaster or admin. Destination web page or blog must have an SSL certificate (URL is in HTTPS).

Great, so let's generate your iframe

You can use the following iframe as your reference iframe for you to copy:

```
<iframe src="" allow="microphone *; camera *; speakers *; usermedia *; autoplay *; fullscreen *; display-capture *;" allowfullscreen="" width="Embed Width" height="Embed Height"></iframe>
```

Copy the text and enter in your specific information. The bold text in the above iframe refers to the elements specific to your needs:

- - This is the invite link you use to invite people to join you. Checkout out Invite People To Join to see how to find your virtual classroom/webinar direct link.
- **Embed Width** - Enter in a whole number value. This number refers to the width of the embed in pixels. The minimum width of a virtual classroom is 1000 pixels. We do not suggest embedding anything small.
- **Embed Height** - Enter in a whole number value. This number refers to the height of the embed measured in pixels. We recommend starting at 640 pixels minimum for the height of your embed when the width is 1000 pixels.

When you have entered in your virtual classroom embed information, you are ready to copy and paste your iframe on to a web page or blog post.

Example virtual classroom iframe:

```
<iframe src="https://smart.newrow.com/#/room/cxa-968" allow="microphone *; camera *; speakers *; usermedia *; autoplay *; fullscreen *; display-capture *;" allowfullscreen="" width="1000" height="640"></iframe>
```
