

Genie's sources

Last Modified on 02/22/2026 7:19 pm IST

 This article is designated for all users.

About

Genie builds its answers using your organization's verified videos and documents. This article explains how to view, identify, and interact with the sources used in a response.

Sources are included in text-based Genie responses.

Where to find sources

Under each answer, Genie displays a Sources section. This applies to:

- Flashcard responses
- Text responses

The Sources section includes:

- Thumbnails for each video or document used
- The entry title, and if available, additional info (like season/episode or document type)
- A plus (+) icon if more sources were used than fit in the visible list

Sources are shown per answer; in threaded conversations, each answer has its own Sources section.

Displaying sources is optional and determined by the system. You may not see this section for every answer.

Metadata vs Custom Metadata Schema Fields in Kaltura

Metadata refers to the predefined standard fields (Name, Description, Tags, Categories) available by default in Kaltura for tagging and managing content. Custom Metadata Schema fields are user-defined, organization-specific fields created in KMC that extend the standard metadata to capture additional descriptive information tailored to your organization's needs.

All-generated content may contain errors or omissions.

Supported source types

Genie supports the following source types:

- **Video entries** - Used with spoken dialogue or OCR (on-screen text)
- **Document entries** - Including PDFs, PowerPoint files (PPTX), and Word documents (DOCX)

Interact with sources

Click any source tile to open the original entry in a new tab. When available:

- Videos open at the relevant timestamp
- Documents open at the relevant slide or page
- OCR images shown in flashcards represent captured on-screen text

Genie follows your organization's permissions and users only see and access content they're allowed to view. If you don't have permission to access a source, it won't appear in the list.
