

Assign resource location

Last Modified on 09/30/2025 9:13 pm IDT

 This article is designated for all users.

Once you have a configured resource, it becomes available as a resource and appears in the live resource location list. You can then select it when creating a new webcast session to easily stream from that source.

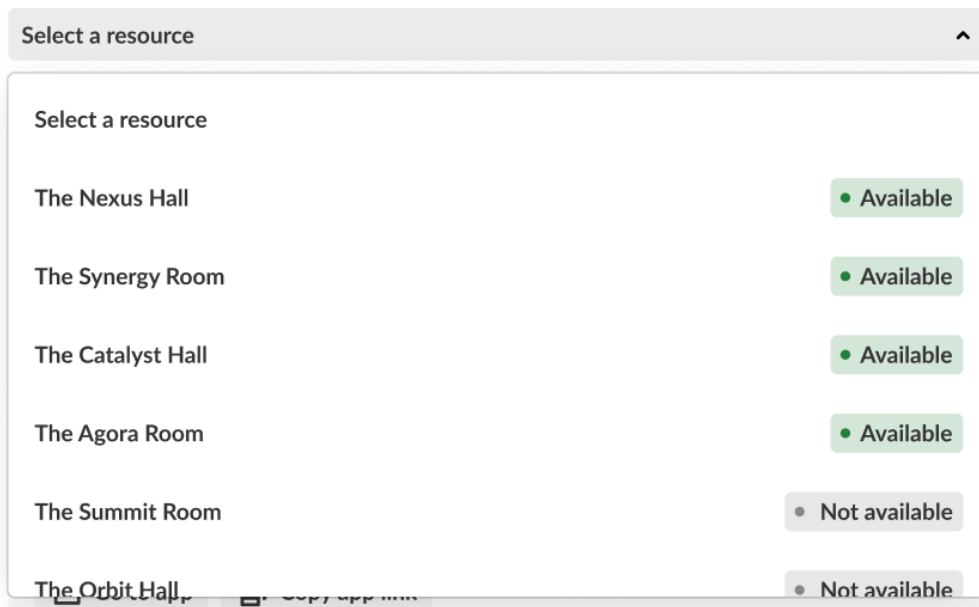

Supported hardware encoders include Epiphan, Extron, Lumens, and Vizrt.

In order to configure resources, contact a Kaltura representative.

1. Click on the Assign resource location pull-down list. A list of resources displays, along with their availability.

Assign resource location

Resource	Availability
Select a resource	
The Nexus Hall	Available
The Synergy Room	Available
The Catalyst Hall	Available
The Agora Room	Available
The Summit Room	Not available
The Orbit Hall	Not available

2. Click on the desired (available) resource. The resource displays as selected.

Assign resource location

The Synergy Room

To ensure a seamless webcast experience, please assign all required resources **at least 20 minutes** before your scheduled start time. This buffer helps maintain stream integrity and prevents any disruptions to your broadcast.
