About

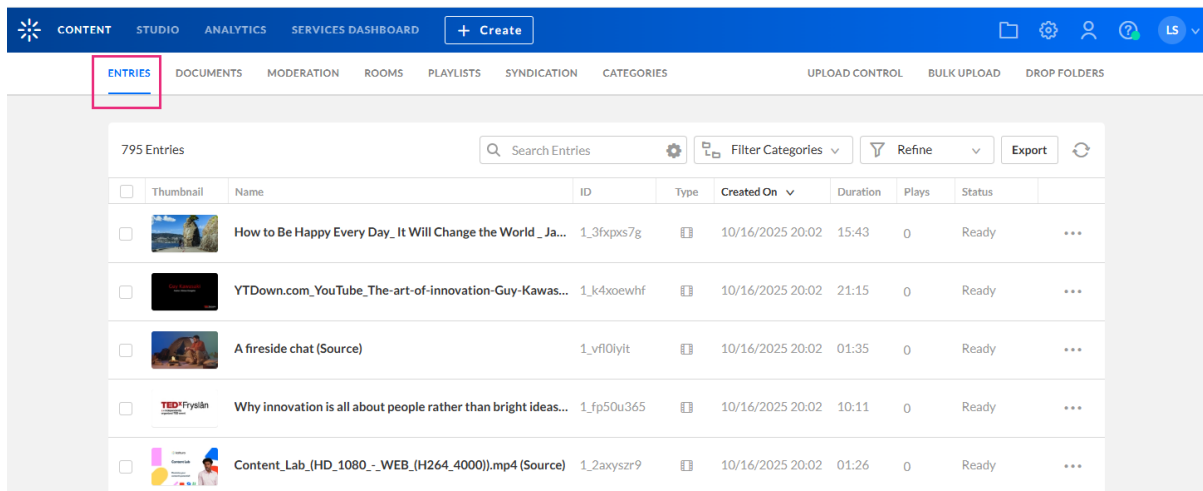

The **Access Control** tab on the entry details page lets you apply an existing access control profile to your media. Access control profiles define who can view your entry and may include restrictions such as geo-blocking, IP restrictions, authentication, or domain control.

For details about access control profiles, visit our article [Create and assign an access control profile](#).

Assign a profile to an entry

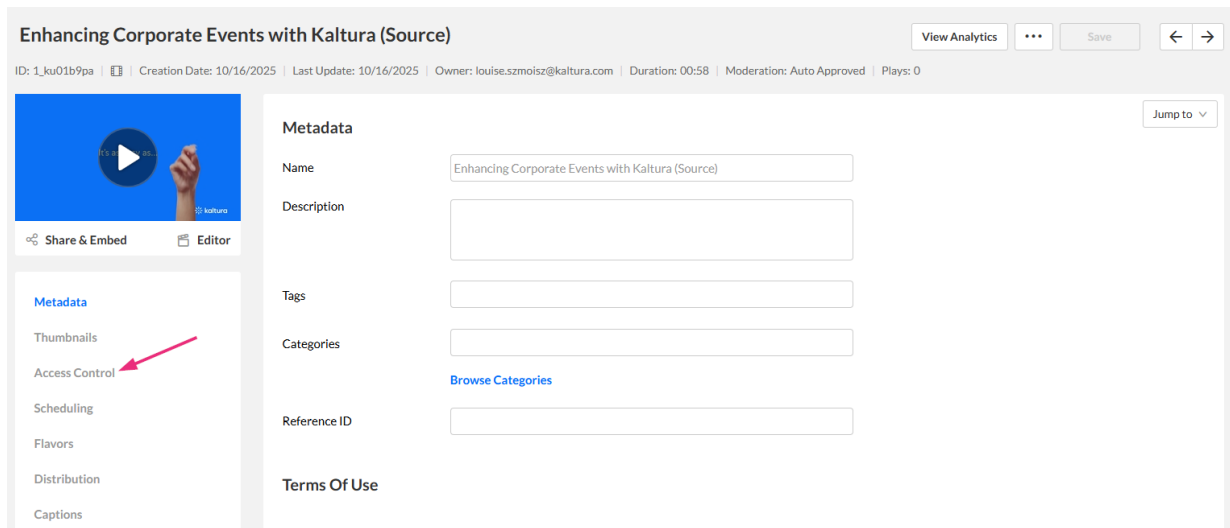

1. Log into your Rich Media Content Management System.

The **Entries** page displays by default.

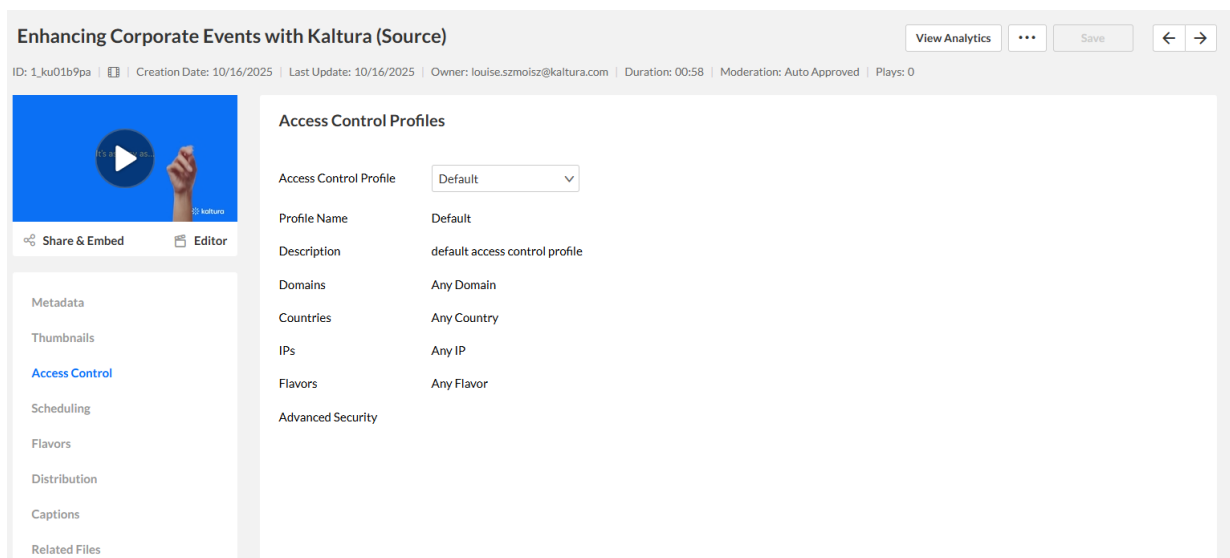

2. Click on the desired entry's title or thumbnail.

The **Metadata** page displays by default. In the left panel, select **Access Control**.

The Access Control tab displays.

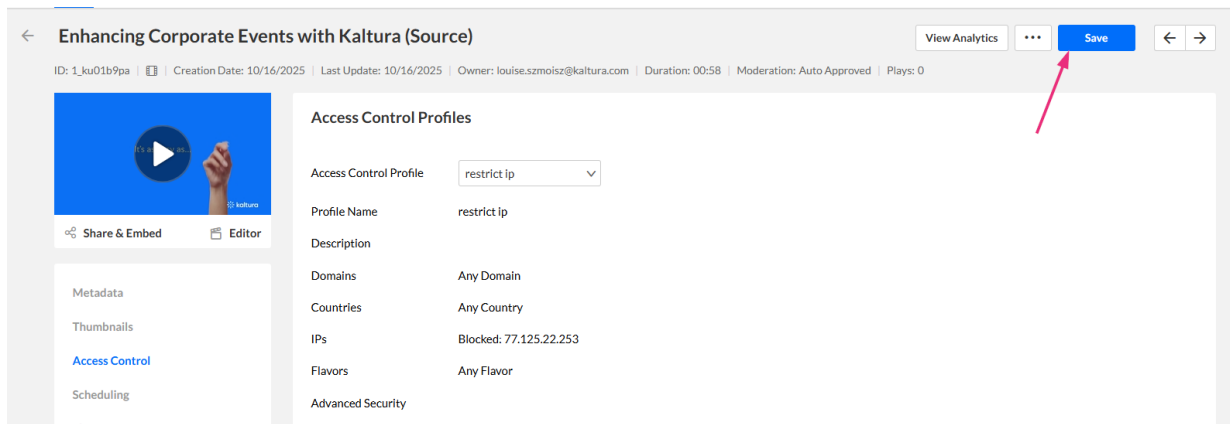

3. Select an existing profile from the drop-down menu.

Access Control Profiles

Access Control Profile	Default
Profile Name	Default
Description	restrict ip
Domains	Any Domain
Countries	Any Country
IPs	Any IP
Flavors	Any Flavor
Advanced Security	

4. Click **Save** at the top right.

Assign a profile to multiple entries via bulk upload

- Add the access control profile ID (as shown below) to the **accessControlProfileId** in your CSV file or XML file.

Add Profile		3 Profiles						
<input type="checkbox"/>	Name	ID	Created On	Domains	Countries	IPs	Flavors	Advanced Security
<input type="checkbox"/>	Default	5998512	09/12/2022	Allow All	Allow All	Allow All	Allow All	...
<input type="checkbox"/>	Test1234	7484662	05/27/2024	Allow All	3 Blocked	Allow All	3 Authorized	KS, Free Preview
