

### Distribute content in KMC

Last Modified on 11/15/2025 6:14 pm IST

This article is designated for administrators.

#### **About**

Use the **Distribution** settings in the KMC to publish a media item to connected destinations such as YouTube or Facebook. This article walks you through exporting, updating metadata, scheduling, and removing distributed entries.

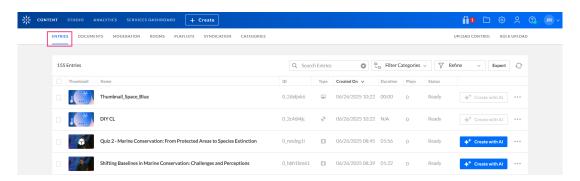

For more information about the Facebook distribution connector, visit our article Facebook Distribution Connector.

### Distribute an entry

1. Log into KMC.

The **Entries** tab displays by default.

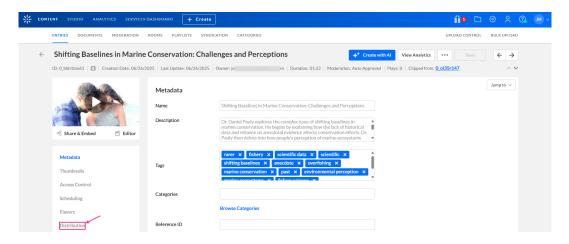

2. Click the entry's name or thumbnail.

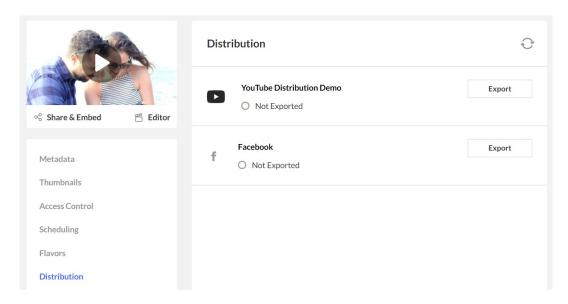

The entry details page displays.

3. In the left panel, click **Distribution**.

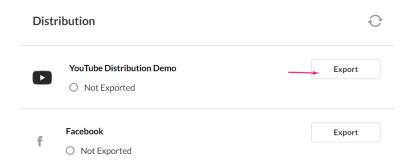

The distribution profiles configured for your account display.

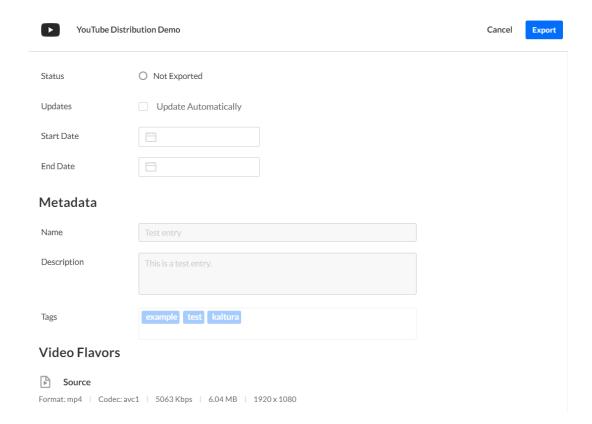

4. Find the distribution profile you want to use and click **Export**.

After you click 'Export' for the first time, the distribution details page opens. Here you can review metadata, enable automatic updates, and confirm the export.

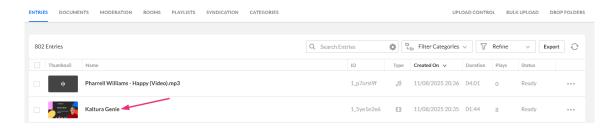

On the distribution details page, you'll see one of the following statuses:

- Not Exported grey circle
- Ready for Distribution black circle
- Distributing blue spinner
- **Distributed** green check

## Update metadata after distribution

You can update title, description, and tags after export.

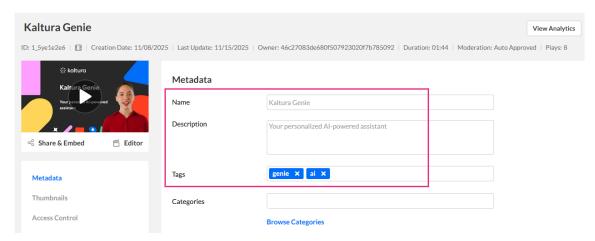

1. On the **Entries** page, click on the desired entry name or thumbnail.

The entry details page displays.

2. Edit the Name, Description, or Tags fields.

3. Click **Save** at the top right.

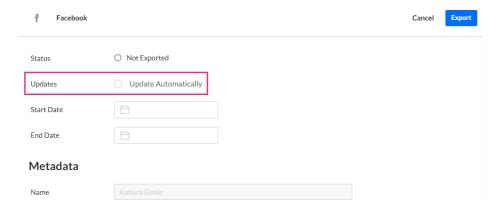

A **Modified** notification appears on the Distribution tab.

Kaltura sends these updates to the destination platform automatically, unless you chose not to enable automatic updates for that profile.

### Automatic metadata updates

When you click 'Export' for the first time, the distribution details page opens. This page includes the **Update Automatically** option.

If you enable 'Update Automatically', Kaltura will continue to push future changes to the following fields:

- Name
- Description

Tags

This option applies only to metadata. It does <u>not</u> update the video file, thumbnails, captions, or any other asset.

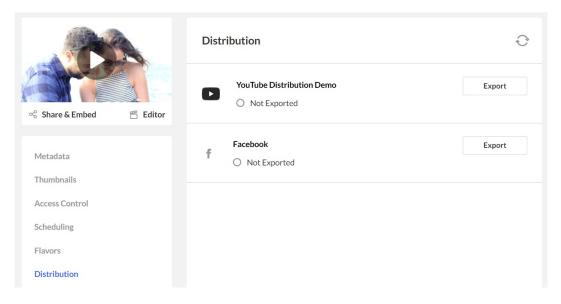

**To update the video file itself on the destination platform** (for example, after replacing or trimming the video), you must remove the exported entry and reexport it.

#### Schedule distribution

You can set scheduling separately for each distribution so that the same content may have a different schedule depending on the distributor.

1. Open the distribution page for the desired entry

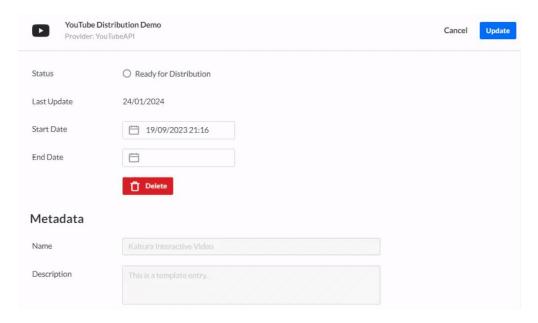

2. Click More Details.

The distribution details page displays.

3. Select the desired **start date** and **end date** and times.

4. Click Update.

The distribution profile displays.

5. When you're ready to distribute the content, click **Export**.

This allows the same content to have different schedules for different destinations.

## Remove a distributed entry

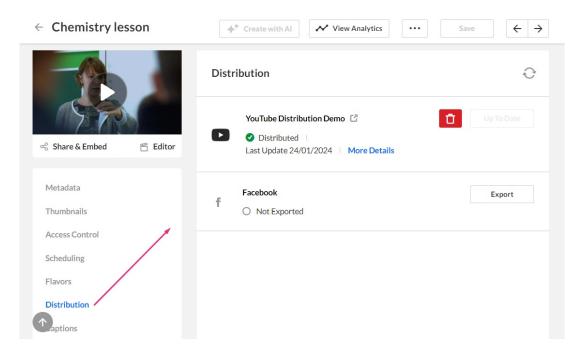

1. On the **Entries** page, click on the desired entry name or thumbnail.

The entry details page displays.

2. In the left panel, click **Distribution** to view the distribution profile page.

3. Click the red **trash can** icon next to the destination.

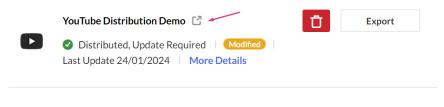

A warning message displays: You are about to remove the exported video that was distributed by (xx). The video will no longer be available via the video page on the external platform. How do you want to proceed?

4. Click **Yes** to continue.

# Preview on the destination platform

Once an entry is distributed, a remote ID is generated and a link icon appears on the Distribution tab. You can:

• Click the **link icon** to open the entry page directly on the destination platform.

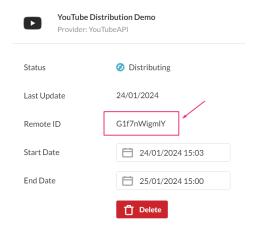

OR

• Copy the **Remote ID** and paste it into the destination site as a reference to locate

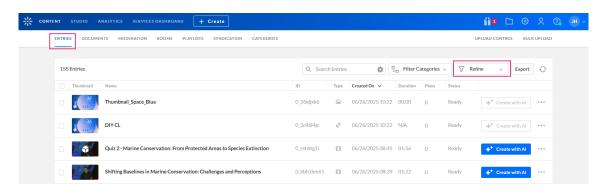

#### the distributed entry.

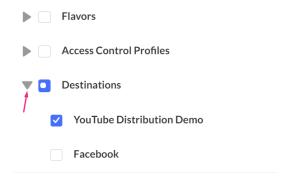

#### Search for distributed entries

1. Under the **Entries** tab, click the **Refine** filter to open it.

2. Click the arrow next to **Destinations** to expand the category.

3. Select the destination(s) by checking the corresponding box(es).

Review the filtered results.
