

Show media details before playback starts

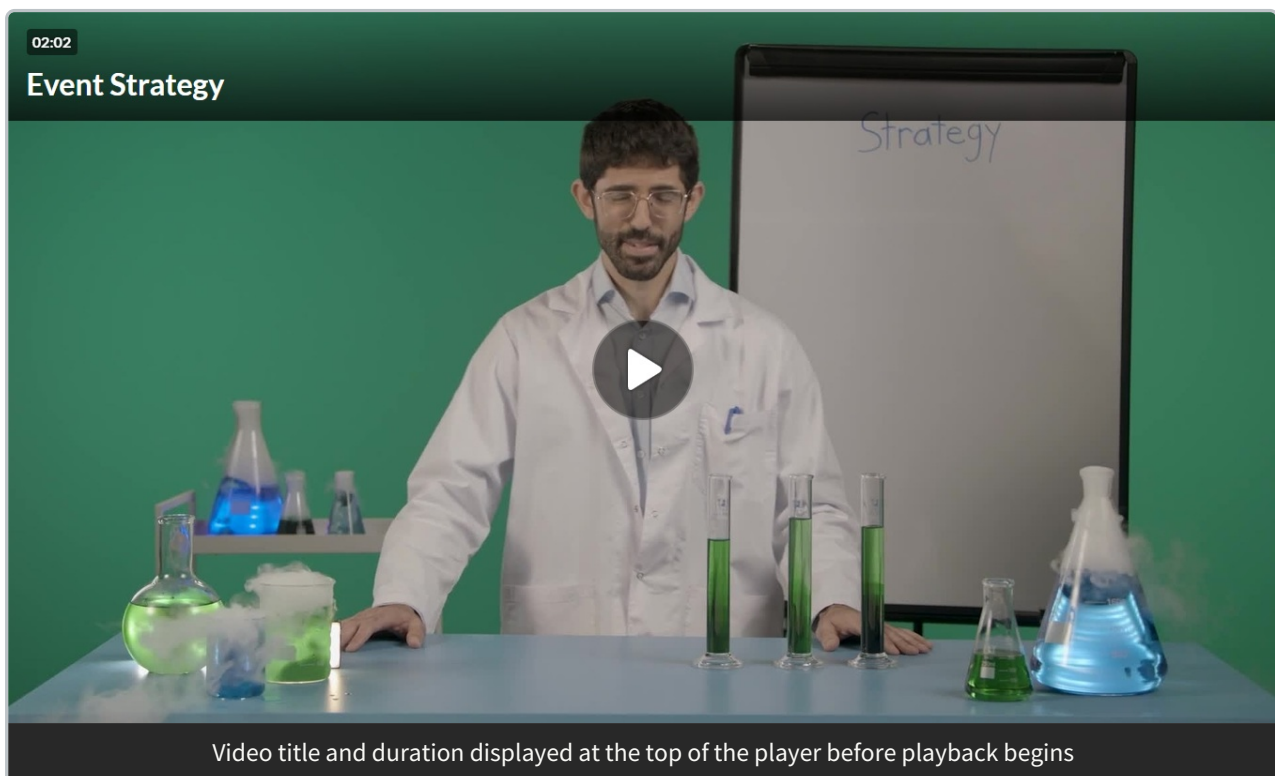

Last Modified on 02/09/2026 9:50 pm IST

 This article is designated for all users.

About

You can set up your player to show key details about a video before it starts playing, including the title, description, and total length. This gives viewers a quick preview of what they're about to watch.

This feature applies to video entries only.

Features

When this feature is enabled, the player can display the following before playback starts:

- **Video length** - Shows the total duration.
- **Video details** - Title and / or description

The information can be positioned at the **top** or **bottom** of the player.

For setup instructions, see [Enable media info to show before playback](#).
