

Add a post-event redirect link to your event

Last Modified on 06/07/2026 2:05 am IDT

 This article is designated for all users.

About

You can redirect visitors to another page after your event ends by turning on a handy **post-event redirect** setting. This is useful when you want to guide attendees to a follow-up destination, such as a landing page, recording, survey, or another relevant site.

You can set or update the redirect at any time - while creating the event, during preparation, or even after the event has already ended. The event URL stays active as long as the event still exists, and it will redirect whenever someone visits it.

This setting is available for single-session and multi-session events.

How re-direct timing works

- The redirect timing is based on the event's scheduled end time. As soon as the event ends, the system begins counting from that point.
- If you change the event end time, the redirect timing updates automatically.
- You can enable the redirect even if the event has ended. It will start working right away as long as the time you set has already passed.

Set up a post-event redirect

1. From the [Event page](#), click the Settings tab.

Post-event redirect

2. Scroll to **Post-event redirect** and click the toggle to enable it.

Once enabled, additional fields display.

3. Enter a complete and valid link (for example, <https://www.yourcompany.com/thank-you>)
4. Set the number of **hours** / **days** after the event ends the redirect should become active.

□

- The **Start redirect** field has two parts: a number field and a dropdown where you choose **hours** or **days**. So if you enter **2** and then select **Days**, the redirect will begin two days after the event ends.
- When saving, hours are converted to days if they equal whole days (48 hours → 2 days; 52 hours stays as hours).

A message below the fields shows the exact date and time when attendees will start being redirected.

5. Click **Save** at the top of the page.

Edit or remove a redirect

You can update the redirect link or timing at any time.

- To edit: go to **Post-event redirect**, update the link or timing, and save.
 - To remove: turn off **Post-event redirect** and save.
-
