Entry title display on player hover

Last Modified on 02/10/2026 11:48 am IST

About

The **Entry title** setting displays the title on the player during playback. The title appears on hover and hides when the player is idle.
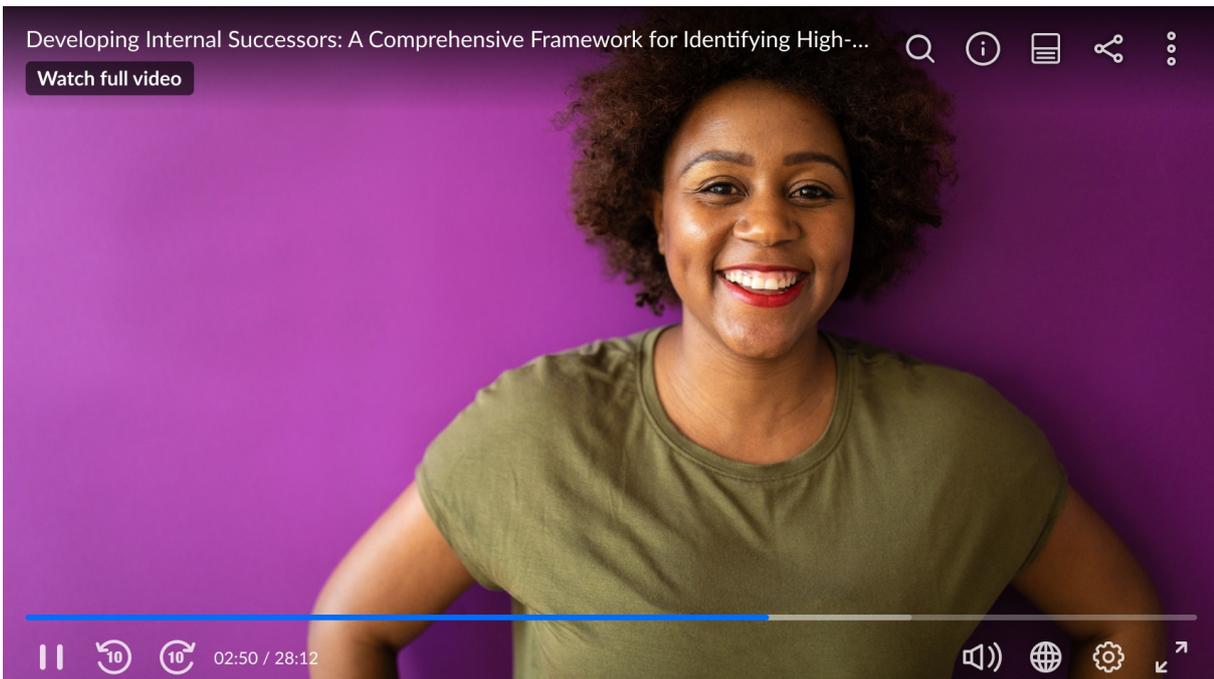

Setup

To learn how to configure this setting in Player Studio, see our article Player settings - Visual.

Behavior

When the setting is enabled:

- The entry title appears when the viewer hovers over the player.
- The title hides when the player is idle or when the viewer moves the cursor away.

> 📱) On mobile devices, where hover isn't available, the entry title appears when player controls are visible and hides when the controls are hidden.

This behavior applies to the following entry types:

- Video
- Audio
- Image
- Document

> ℹ️
> - For YouTube entries, the Kaltura entry title is not displayed, since YouTube already shows its own title.
> - For clipped entries, the setting has no effect and the title is not displayed.
