

Seek increments

Last Modified on 01/15/2026 4:46 pm IST

 This article is designated for all users.

About

The player includes seek controls that let you navigate within a video while it plays. Depending on how the player is configured, you may be able to jump in short increments using skip buttons.

Setup

To learn how to set the seek increments on the player, see [Configure seek increments](#)

Feature

When using skip buttons, each click moves within in the video by a fixed amount of time. For example, skip 5 seconds for shorter, precise navigation; skip 10 seconds for faster movement through the video.

Seek increments are configured by your administrator. If the seek increments are set to 5 or 10 seconds, the skip buttons display the corresponding number (5 or 10) to indicate the amount of time you can skip. If the seek increments are set to any other value, the skip buttons are displayed without a number, even though skipping is still

enabled.

Seek increments cannot be changed by the viewer.
