👥 **This article is designated for all users.**

About

Playback speed lets viewers control how fast a video plays, making it easier to watch content at their own pace.

Setup

To enable and configure playback speed in the player, see Manage playback speed settings.

Features

When playback speed is enabled, viewers can:

- Choose from the following speeds: **0.5x**, **1x**, **1.5x**, and **2x.**
- Change playback speed either from the player controls or from the settings menu, depending on how the player is configured

The selected speed is applied immediately and remains active until the viewer changes it or refreshes the page.
